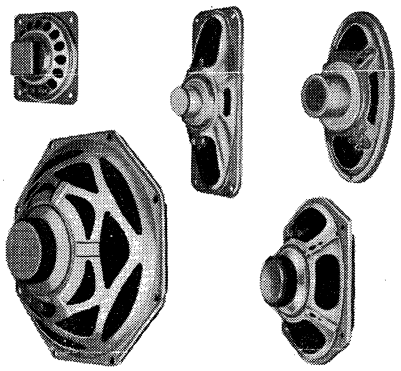
Amperex INDUSTRIAL AND HIGH FIDELITY Speakers

STANDARD SPEAKER SERIES



Amperex standard speakers offer a wide diversity in characteristics, size, and price for all kinds of radio and television sets, phonographs, tape recorders, sound columns, etc.

Most standard speakers have a flat magnet system of powerful Ferroxdure ceramic. For television sets and other applications where the leakage field should be kept as small as possible, there are Amperex loudspeakers with a Ticonal magnet in a pot system. Due to the use of Ticonal 750 these pot systems are very small.

NOTE: ALL STANDARD SPEAKERS AVAILABLE IN 4, 8, 15, AND 25 OHM IMPEDANCES.

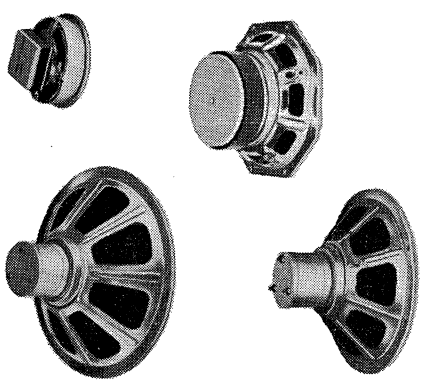
HIGH QUALITY SPEAKER SERIES



The high-quality speakers have been specially designed for use in Hi-Fi equipment, where a high power-handling capacity, a very wide frequency-range and a negligible distortion level are required. Examples of application: acoustic boxes, bass-reflex boxes, juke boxes, Hi-Fi enclosures with or without cross-over network and stereo columns.

-3	300 ohms	-16	16 Ohms	-24M	24000 ohms
-03	3-4 ohms	-2M	2000 ohms	-1K	1000 ohms d.c.
-06	600 ohms	-5M	5000 ohms	-2K	2000 ohms d.c.
-08	8 ohms	-12M	12000 ohms	-4K	4000 ohms d;c;

Ohmage is usually impedance at 1000 hz. except those having "K" in suffix which by tradition is the d.c. resistance. Impedance is usual 4-7 time this.

CORD TERMINATION – MONAURAL-When "-9-" appears in code number, a standard ¼-inch dia. 2-circuit plug is attached to cord. A few older numbers such as 50, 56, 156, 157 have plug without "-9-" in code number. Other than these few exceptions those without "-9-" are equipped with a standard pin tip terminal. Stereo– All models can be equipped with stereo cords; althoughnot listed. Those with "-14" in code number use a single ¼-inch dia. 3-circuit plug. Those with "-15-" have two 2-circuit plugs intended to go to separate jacks for each channel.

HOW TO USE eem

electronic engineers master

1973-74

Need directory information?

EEM contains four complete directories which provide the most up-to-date information available. These directories are listed and described at the right. They appear in all three volumes, with the exception of the Trade Mark Directory which appears only in Volume 1. Directory references to Volume 4 indicate the 1973 edition, which you received in January. That copy of Volume 4 should be retained to complete the 4-volume set.

Add Volume 4/1973 to your copies of Volumes 1, 2 and 3 to make a complete set of **EEM** for 1973-74.

Included in this volume are:

The Product Index and Directory

The Product Index and Directory (green section, page 9) lists more than 6,000 types of electronic products alphabetically, by product. Under each product heading is a complete, alphabetical listing of manufacturers who make that product. **Bold face** listings indicate which manufacturers have provided catalog data on that product in the white pages.

The Manufacturers and Sales Office Directory

The Manufacturers and Sales Office Directory (starts yellow section of each volume) lists more than 3,000 manufacturers of electronic components, materials, instruments, assemblies, systems, and key services. Provided are complete addresses, phone numbers, sales managers' names, names of application engineers, TWX numbers where applicable, selected distributors. **Bold face** listings indicate that manufacturers have provided catalog data in the white pages and that sales offices are listed.

The Distributor Directory

The Distributor Directory (yellow section, page 1594, with black edge marking) lists more than 1,000 electronic distributors and branch locations, alphabetically by distributor's name, geographically by state and city.

Need catalog information?

For complete catalog information on any product, refer to the Product Index and Directory (green section, page 9, all volumes) which provides a complete listing of all the manufacturers who supply a particular product. Those manufacturers listed in bold face with page and volume number references have provided catalog data on this product in the catalog section (white pages) where you can find the information you need. References to Volume 4 indicate the Volume 4 you received in January and which should be retained to complete your 4-volume set of EEM.

Need additional information in a hurry?

Two special telephone services are being maintained for EEM users to provide extra information you need. If you need to determine a local source of supply, just **D.I.A.L. EEM.** This toll-free service (**D**istributor **I**nformation **A**nd **L**istings), provides you with the name of a sales office or distributor in your area who can provide a needed product.
For up-to-the-minute listings of manufacturers who provide certain IC functions, **call the IC UPDATE HOTLINE.** Listings of IC functions are updated daily by manufacturers throughout the country. For information in a hurry, **just D.I.A.L. EEM** — call toll-free 800-645-9200 (in N. Y. State call collect (516) 294-0990). Or **call The IC UPDATE HOTLINE,** Dial toll-free 800-645-9201.

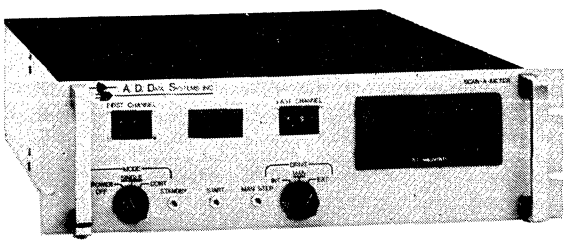
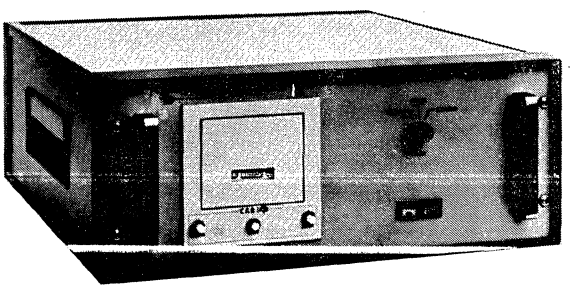
DATA ACQUISITION SYSTEMS

DATALOGGING SYSTEMS FROM STOCK UNITS. ASSEMBLED TO CUSTOM REQUIREMENTS

The Dataloggers accept multiple analog signals, from physical transducers, such as thermocouples, strain gauges, and similar devices. These are scanned by a multiplexer and programmer, individually conditioned to the appropriate voltage level; digitized, converted to computer compatible format and recorded.





SERIES M

This datalogger is available with either 10, 100 or 1000 channel multiplexer capability, digitizing and recording in computer compatible magnetic tape. The tape format can be either straight binary or binary coded decimal, 7 or 9 tracks and 200, 556 or 800 b.p.i. The system speed can be from manual push button to 1000 characters/second asychronous or up to 5000 characters/second in the slew mode.

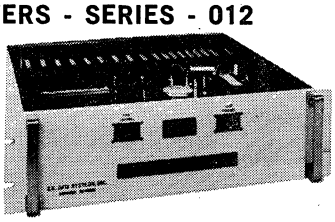
DATALOGGER COMPONENTS

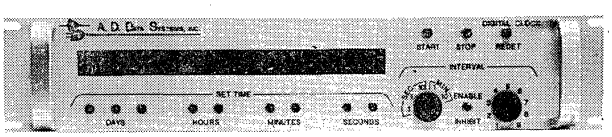
The full range of components used to build up the datalogger systems are available as individual products. Each designed for ease of interface with individual powers supplies, pin board programming and DTL or TTL compatible logic levels.

MULTIPLEXERS - SERIES - 012



Both reed relay scanners and FET multiplexers from 10 channels to 1000 channels are available as standard. Using a unique modular design, the multiplexers can be built up from a wide range of modules to give 1, 2, 3 or 4 wire switching. Features include low thermal switching, high common mode rejection, switched guard, flying capacitor filtering, and programming.

DIGITAL CLOCKS - SERIES - 015



This clock has been designed not only as a visual display of time, but also to be easily integrated into the data handling systems. All inputs and outputs are buffered TTL or DTL compatible logic levels.

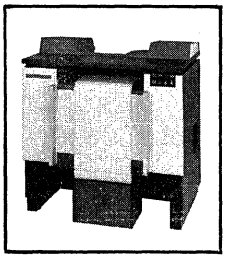
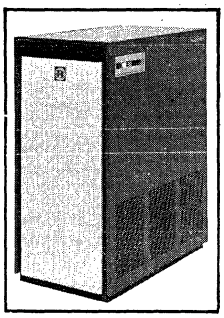
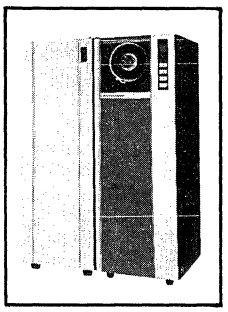
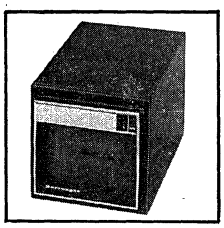
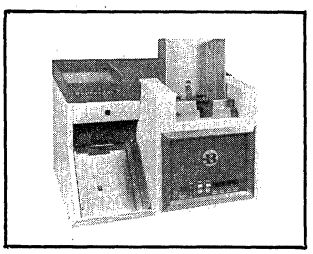
BURROUGHS COMPUTER SYSTEM COMPONENTS

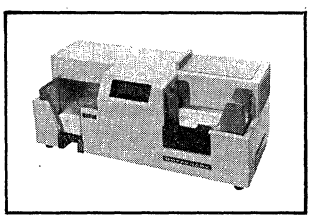












LINE PRINTER

New model combines medium-to-high speed with outstanding print quality and operating flexibility to establish a new high in cost/effectiveness for printers. Printing mechanism uses a train module which consists of a predetermined set of print characters riding on a circular track past the printing facility. This method assures superior print quality through exact horizontal and vertical print alignment. Print character selection is virtually unlimited through operator-changeable train modules of 16-, 48-, 64- and 96-character sets. Basic printing rate is 750 lines per minute with a 48-character set. Other printing rates are up to 1,200 lines per minute. A paper slew rate of 20 inches per second results in maximum throughput. Forms control flexibility is available through Burroughs Forms-Self-Align and optional 12-channel carriage tape. Column drop out detection is automatic. Other features include complete control panels on both the front and rear of the unit, and standard 120 or optional 132 print positions.
The unit cost of this new printer is low when compared to other printers of comparable abilities.

SYSTEMS MEMORY DISK FILES

High speed, magnetic disk files used for system software, users' programs and general data storage. They feature one fixed read/write head per track of information on the disk surface. One systems memory module has a capacity of 16-million bits with an average access time of 17 milliseconds. The average data transfer rate is 2.34 megabits per second. Other models are available with an average access time of 5 milliseconds. The units are self-contained with all power and electronics to provide a 6 or 8 bit buffered interface.

MAGNETIC TAPE TRANSPORTS

Several high speed, high precision subsystems are available. Models feature automatic tape threading and loading, easy tape handling, phase-encoded recording, modular expansion, and multiple simultaneous accessing when used in multiple processor environments. Bi-directional units operate at up to 250 inches per second. Packing density is up to 1,600 bits per inch, and transfer rates are up to 400,000 bytes per second. Other features include fast rewind and controlled environment tape chamber. Units are available with either NRZ or phase-encoded electronics or mechanism with only servo electronics.

CASSETTE TAPE SUBSYSTEM

For data and program storage. Reads/writes at 10 inches per second. Search is 30 inches per second and rewind is 60 inches per second. Dual-gap read/write head with automatic write verification enables read after write checking without tape backspacing and significantly reduces tape movement and wear. The unit features spindle controlled, multi-speed reel drive and photoelectrically controlled tape speed. Magnetic tape cassette has a capacity of 280 feet excluding a 20-inch clear leader at the beginning and end of the tape. Unit is available with 800 BPI NRZ or 1,600 FCI Phase Encode electronics. Other features include dual track recording and optional R (removal is prohibited) and WS (writing is enabled) status indicator lamps.

CARD READERS

Low cost, high performance reader operates at 800 cards per minute (demand rate) and can be adjusted to rates of 600 or 300 cpm. It reads standard 80-column cards photoelectrically, column by column. Reading is highly accurate with double strobe comparison for each column, and with light and dark checks for each card. An operator-changeable 51-column adapter is available for the unit.

Solid-state serial card reader operates under program control of the computer. It reads standard 80-column cards at 200 cards per minute. Other features include choice of EBCDIC or BCL code, and individual feed and stacking hoppers.

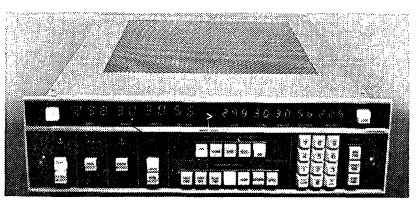
Datatron Timing Instrumentation Products

Time Code Generator/Translators

Model 3000

Model 3000 is a universal generator/translator which can output up to 5 serial time codes (IRIG, NASA, AMR, XR3, 2137, 1892, etc.) and can translate virtually any time code through plug-in cards. Standard features include a front panel display of accumulated time in seconds, minutes, hours and days, 42 lines of parallel BCD data and pulse rate outputs of 1K, 100, 10 & 1 pps. Synchronization controls mounted on an internal subpanel permit manual correlation to an external time standard such as WWV. The translator section includes carrier filters and digital error bypass. Special pulse rates, sine waves, parallel binary outputs and code dropout protection are available as options.

The 3000 can be packaged in a 3½ in. high rack mount configuration with Datatron's unique fold-in circuit cards, in a 7 in. high top loading cabinet, or as a ¾ ATR (7½ x 8 x 15) package including batteries so it can be hand carried without losing time integrity.



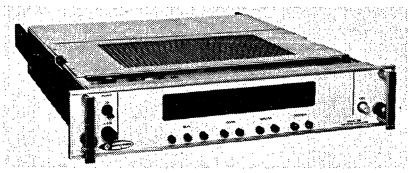
Model 3030 Time Search Unit

Model 3030 is industry's first computer-controlled time code generator, translator/tape search unit in a single 7 in. high rack cabinet. During data acquisition, the 3030 acts as a time code generator, outputting a serial time code for recording on analog magnetic tape. During data reduction, the time code translator converts the previously recorded serial data to a parallel format to automatically control the search of a transport for a pre-selected playback interval.

Either the front panel keyboard or the computer can control playback interval, fast forward, fast reverse, play forward, play reverse, stop and record. Logic levels for all computer interface signals are +5V and 0V.

The 3030 can output IRIG B or other codes in both DC level shift and modulated carrier forms. An internal frequency standard (5 pts/10^7/day) or an external 1 MHz input can be used. The translator, which can translate virtually all time codes, features a wide AGC range, digital and analog filtering.

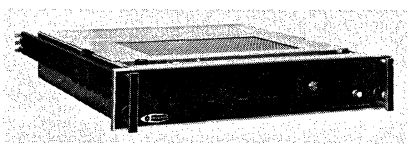
Time Code Generators



Model 3100

Model 3100 is a universal time code generator available in a 3½ in. rack cabinet with fold-in cards, a 7 in. top loading cabinet, or a 7½ x 8 x 15 ATR case. The unit accumulates a BCD representation of days, hours, minutes and seconds from an internal frequency standard — or from an external input. Where close correlation to WWV is required, a high stability oscillator having a drift rate of less than 50 micro-seconds per day is available as an option. The 3100 can output up to 5 simultaneous serial time codes for recording on magnetic tape, film and/or oscillograph recorders, including two special multiple rate slow codes. A visual display of seconds, minutes, hours and days, a 42 bit parallel BCD output, and pulse rates of 1 K, 100, 10 and 1 pps are also provided.

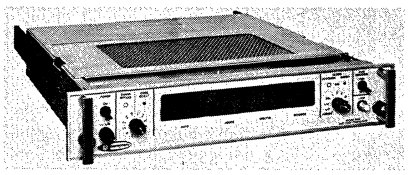
Synchronization controls, including advance/retard, mounted on an internal subpanel to prevent unintentional activation, permit the operator to manually time correlate the 3100 to an external time standard. As an option, the generator can be started automatically from a WWV "tick" with circuitry and controls to compensate for the propagation delay between the generator and the external time standard.



Model 3150

Model 3150 is less versatile — and less expensive — then the 3100. It's available in the 3½ in. rack configuration. Like the 3100, up to 5 serial time codes can be simultaneously generated including the IRIG, NASA & AMR families, the XR3 2137 and 1892 codes and a special multiple rate code designed specifically for visual recorders. Each code is provided in both the DC level shift and where applicable the modulated carrier. Visual display, BCD parallel output and pulse rates are standard. In fact, the economical 3150 will do everything the 3100 will do except for automatic synchronization with propogation delay to an external time standard.

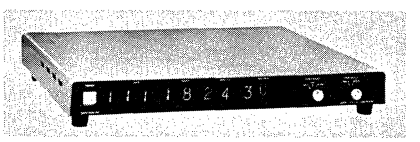
Time Code Translators



Model 3200

Model 3200, housed in a compact 3½ in. cabinet, will accept nearly any input code simply by changing the plug-in code translation card. Available code cards include the IRIG format, A, B, C and E, the NASA 36 and 28 bit codes, the Apollo and Gemini code, the AMR D5 code, and the XR3, 2137 and 1892 codes. Special codes can also be translated. Many of the 3200 code translation cards accept an entire family of time codes, with a front panel rotary switch to select the proper code. The 3200 has a wide dynamic range AGC amplifier so that the translator can operate with a magnetic tape transport at widely varying record-to-playback and record-to-search ratios. Carrier filters separate the timing signals from other data to insure accurate translation, and a front panel rotary switch with 0,1,2,4,8 and infinity permits selection of the number of consecutive erroneous frames to be bypassed.

Two serial slow codes are available for "quick look" on visual recorders. Where protection against momentary time code dropout is important, Datatron offers an option card which fills in for missing carrier cycles at one of two fixed frequencies. Also available is the Model 3600 DC Code/Failsafe unit which operates over a frequency range of 20 Hz to 64 kHz. Accumulated time in seconds, minutes, hours and days is displayed in the front panel.



Model 3270

The 3270 is a simple, low cost, compact time code translator which occupies just 1¾ in. of rack space and can translate IRIG A or B, switch selectable from the front panel. A visual display of hours, minutes and seconds is provided. Options include days display, "on time" parallel BCD outputs, pulse rates, digital error bypass, automatic forward and reverse reading, display and BCD output freeze and a 600 ohm isolated and balance input.

A NASA 36 and an XR3/2137 card is also available.

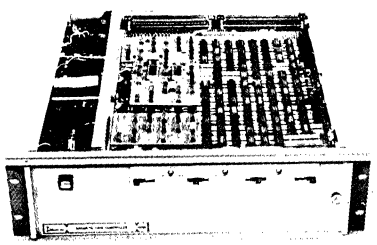
flexibility...

Magnetic Tape Systems
DATUM's I/O systems let you add up to four magnetic tape units to any of 20 makes of minicomputer. Seven- and nine-track mix, NRZ and phase-encoded formats, different densities, several speeds and compatible software.



Key conversation piece in the mini-to-tape dialogue is DATUM's Series 5091 Formatter. This lets you generate and read IBM-compatible NRZ and/or phase-encoded formats. One formatter will handle up to four 7- or 9-track, multiple density (200, 556, 800 bpi), multiple-speed (6.25 to 112.5 ips) magnetic tape units. Plug in a computer adapter and you have a complete controller system. Daisy-chain two formatters and control up to four 7- and 9-track NRZ plus one to four 1600 bpi tape units.

Over 1,000 DATUM magnetic tape systems are operating reliably here and abroad. They're field-proven. We like to provide you with a total system — tape units, formatter/controller, software, installation and all the expertise derived from decades of systems experience. But we also furnish formatters with blank PC boards for the knowledgeable systems man who wants to build his own computer adapter. These boards have 196 IC sockets already mounted. DTL/TTL integrated circuit logic is used throughout the formatter design to ensure compatibility.

Total systems prices start about $3,350. Delivery off-the-shelf much of the time, 30 days to be on the safe side.

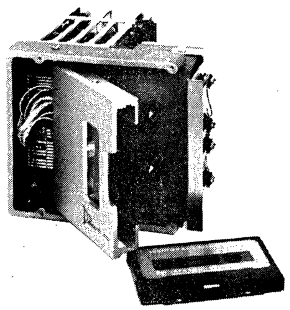
Digital Cassette Systems
DATUM's cassette systems create new standards of performance. Using the Peripheral Dynamics Model 4200 Digital Cassette Transport — the cassette with reel performance — these systems offer:

storage capacities of over 20 million bits, two- or four-track recording, NRZ or phase-encoded formats, read/write or read-after-write heads, Pertec compatibility.

And no more tape-chewing. A reel-driven servo system, without capstans or pinch rollers, keeps tape velocity constant. A torque feedback tension servo maintains tape tension. A reference-edge tape guidance system provides precise tracking (±0.001 inch) and cuts skew to less than 2 microseconds at 37.5 ips. So tape will last.

Standard speed is 37.5 ips, though you can have up to 75 ips or down to 10 ips. Search and rewind speed is 120 ips. Operates bidirectionally at high or low speeds, under local or remote control.



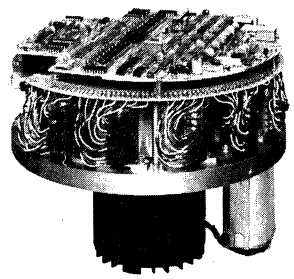
Reliability? It's the simplest cassette drive on the market. Two moving parts in the drive mechanism. No springs, capstans, pinch rollers or solenoids to get out of whack. It is as reliable as it is simple.

OEM versions or systems, with the same formatters, controllers and software as with conventional reel-to-reel tape drive systems.

Total system prices start about $840.

reliability...

Mass Memory Systems
DATUM's mass memory systems—drums or disks—offer low cost expansion to core-limited minicomputers, or solutions to other storage problems requiring a highly reliable, rapid-access, economical data base.



At the lower end of the storage scale, DATUM's Series 55 rotating drum memories provide 16K 16-bit word capacity on 4 tracks and an average access time of 17.5 milliseconds.

At the upper end, 262K words on 64 tracks, with 4096 words per track. Word transfer rate is 122 kHz. Prices for simple units from $1,750 to $2,950 with self-clocked read-write electronics.

Series 88 drums, rugged and reliable, provide up to 1.2 million words of storage. Designed for tough environmental conditions, high vibration and shock-prone applications.

All drums have head-per-track, fail-safe, flying heads. And low cost per reliable bit.

DATUM's new Series 44 dual disk drives are designed primarily to provide both sizeable on-line random access storage and unlimited off-line storage. Small system compactness and price, with big system features like top-loading removable disks, air filtration systems and optical head positioning. Storage capacities to about 3 million words.

As with tape and cassette systems, DATUM offers formatters, couplers and software for most common minicomputers.

Total systems prices start at about $2,000.

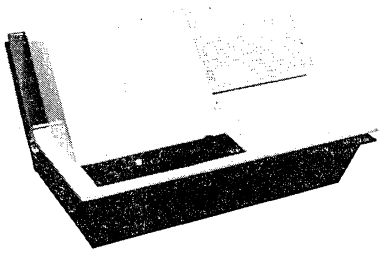
Source-data Entry Systems
Datum's Optical Mark Reader provides a low-cost system for a wide range of source data entry applications: remote order entry, inventory reporting, survey tallying, billing, insurance record maintenance, and sales ticket reading.

This OMR terminal reads pencil-marked and pre-printed data from prepared forms, tapes, and paper-sized documents. Data is read, assembled into ASCII alphanumeric characters and formatted for asynchronous transmission at up to 9600 baud rates, by phone-line modem. Any conventional asynchronous remote receiver may be used: teleprinters, paper-type punch terminals, CRT displays, etc.



Each 12-bit document entry is translated into two 10-bit (or optionally 11-bit) asynchronous serial characters: one start bit, six data bits, one dummy bit and one stop bit. Standard scan speed is 9 inches per second. Transmission rates are 120, 60, 30, 15, or 10 characters per second. Interface signals conform to EIA standard RS232C.

Popular input request characters from a remote computer can also be recognized.

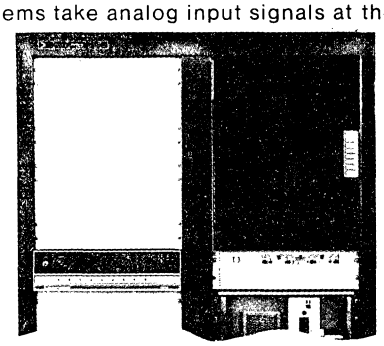
For error correction, automatic retransmission control via reverse channel signal is provided.

DATUM's Model 5098 Optical Mark Reader terminal systems start under $2,000.

expertise...

Data Systems
DATUM's SYSTEM 70 packages data acquisition, control and automation expertise in low-cost, 'universal' hardware and software modules.

Turn-key minicomputer-controlled systems take analog input signals at the



transducer level, condition, multiplex and convert them to digital numbers required for the NOVA series general purpose processor to exercise system control, instructed by a comprehensive software package.

DATUM's proprietary Universal Data Acquisition Module (UDAM) contains power supplies, timing and control logic, high-, or low-level multiplexer, sample-and-hold and analog-to-digital converter to provide an uncomplicated 'black box' link between signal source and computer.

A Real-Time Interface Unit (RTIU) acting as a bus extender, links the output of the UDAM to the processor using either a programmed I/O, or direct memory access. The RTIU also lets you interface a wide range of input/output hardware to the processor.

Programming packages, as modular as the hardware, offer an extensive applications software library.

Know-how accrued from building multiple millions of dollars worth of systems, ensures hardware best suited for your particular application, present budget and future expansion. And absolves you of systems responsibility.

System 70 prices start under $20,000.

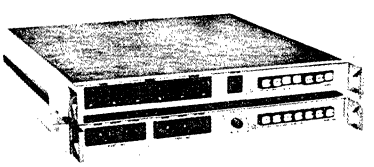
precision...

Timing Systems
DATUM's timing systems are less peripheral to minicomputers than the other way around. Instrumentation for generating coded time signals, dispensing, decoding and displaying them creates a time base to which all other data can be correlated.

From simple low-cost digital clocks counting with six-digit resolution (99 hours 59 minutes, 59 seconds) to range generating stations with precise, nanosecond correlation and triple-redundant reliability. DATUM timing equipment has become synonymous with excellence.

Problem: searching for random data on segments of recorded magnetic tape, quickly and repetitively. Solution: DATUM's Tape Search System. Simply set thumbwheel switches for the hour, minute and second (or millisecond) marking the beginning and end of the segment sought and hit the Search Switch. Your tape transport spins, the segment is found, and its recorded time track is displayed digitally throughout the playback sequence. Computer-compatible versions speed the most sophisticated processor-controlled data reduction processes.

Much of the science of time-correlation grew from the exacting needs of man-in-space programs. DATUM's unique timing know-how derived from these programs



is rapidly finding application in industrial, medical, law enforcement and scientific pursuits. DATUM staff members help you create new uses for timing instrumentation. The benefits of over 100 man-years of timing systems applications experience are yours for the asking.

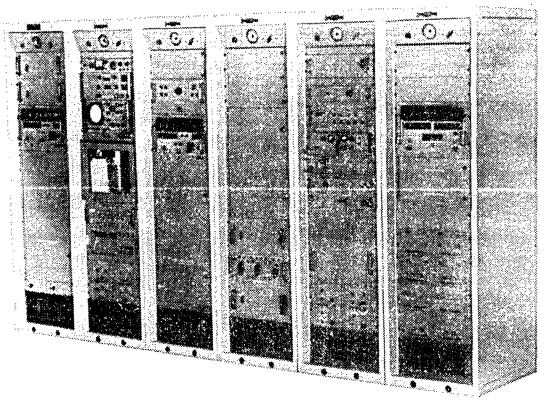
APOLLO TIMING SYSTEM

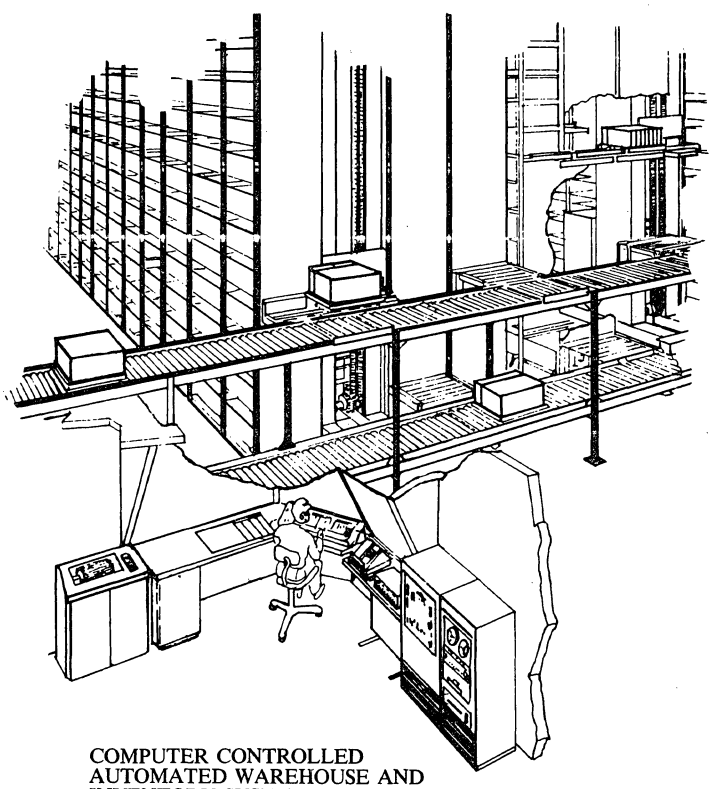
Sophisticated central timing systems were installed on NASA's Apollo instrumentation ships. Time codes, standard, and non-standard reference frequencies are generated and distributed to range instrumentation equipment located on the ships. Time signals are synchronized within one ten thousandth of a second with the Naval Observatory.

Precise rubidium and crystal frequency standards control redundant master time-of-year clocks and time signal generators. Elapsed time clocks feature manual or automatic initiation for pre- or post-event timing. All frequencies and time codes are programmable. A time scaler produces time and event markers for event recorders and plotting boards.

Time comparison equipment includes a WWV receiver, VLF doppler compensated receiver, chart recorders and an oscilloscope. Redundant master power supplies are backed up by an internal battery pack. Chargers keep the stand-by pack ready at all times.

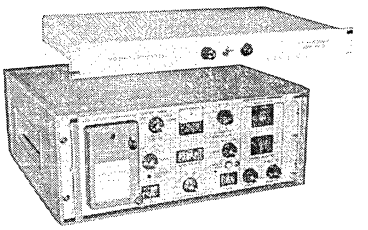


DIGITAL EQUIPMENT, DATA ACQUISITION AND TIMING SYSTEMS



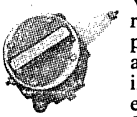
COMPUTER CONTROLLED AUTOMATED WAREHOUSE AND INVENTORY SYSTEM

Electronic hardware and computer software provides a fully automated material handling and inventory warehouse system. Included are computer, disc mass storage unit, magnetic tape system, teletype, card reader, medium speed line printer, interface controllers for conveyors and storage and retrieval units. A variety of inventory reports are available.

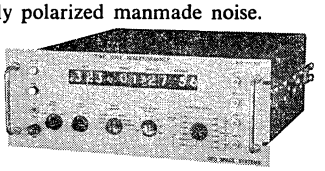


VLF RECEIVERS AND ACCESSORIES

Solid state VLF receiver/phase comparators accept signals from expanding VLF network. Frequency range 10.0 - 30.0 KHz, image rejection 60 db or better, AGC greater than 40 db, tracks input levels of 0.01 μV at signal-to-noise ratio of −50 db. Less than 0.1 μs tracking error. Servo-tuned.

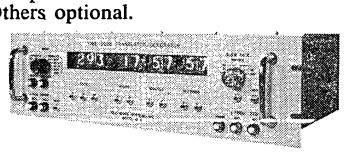


VLF antenna multicoupler reduces desensitization, phase shift, cross coupling, and coherent ground circuit interference. 50 Ω input, eight 50 Ω outputs with 50 db isolation, 3 db gain. Long-wire or whip antenna matches 50 Ω coax transmission line. Reduces horizontally polarized manmade noise.



TIME CODE READER/SCANNER

Model 8108 provides reliable phase-coherent serial and parallel outputs from noisy time code modulated non-coherent carriers. Acquisition/lock assures coherent time outputs for up to 32 frames of signal dropout once synchronized. Handles NASA 36-bit time code at 1 KHz rate plus four non-coherent carrier rates. Others optional.



TIME CODE TRANSLATOR/GENERATOR

Capable of functioning either as subcentral timing system or independent timing generator. Generates all timing signals and pulse rates for radar and computers, including NASA BCD and serial codes plus binary time-of-year in tenths of a second.

INDUSTRIAL CARD READERS

- *Reliable Performance in Rugged Environments*
- *Interposer Contacts for Error-Free Readings*

Proven success in industrial environments: applications include programmed control of batching and blending processes, automatic storage/retrival and conveyor systems, and automated test equipment, using high current contact closures.

Little maintenance is needed; the self-wiping interposer contact design eliminates periodic dissassembly or cleaning.

Sure, accurate readings result from using the interposer techniques. An interposer (switching mechanism post) slips through a hole in the card when the reader is actuated. Contacts are remote from the card, avoiding misreadings due to contaminants on the card often found in heavy industrial environments.

Additional choices are offered for manual and motor operation, and for form A (switch normally open) and form B (switch normally closed) switching. Blank and preprinted durable vinyl and mylar cards and card punches are available from Hickok.

Set/reject options offer electrical actuation for remote control or manual actuation for economy.

TTL-compatible electronic scanners provide all circuitry for 12-row output in parallel, column serial. The Model 22 Scanner, for the 264A Reader, and the Model 80 Scanner, for the 960A Reader, translate the punched card data into TTL-compatible interfaces. Need directory information?

EEM contains four complete directories which provide the most up-to-date information available. These directories are listed and described at the right. They appear in all three volumes, with the exception of the Trade Mark Directory which appears only in Volume 1. Directory references to Volume 4 indicate the 1973 edition, which you received in January. That copy of Volume 4 should be retained to complete the 4-volume set.

Add Volume 4/1973 to your copies of Volumes 1, 2 and 3 to make a complete set of **EEM** for 1973-74.

UNITED TECHNICAL PUBLICATIONS

Included in this volume are:

The Product Index and Directory

The Product Index and Directory (green section, page 9) lists more than 6,000 types of electronic products alphabetically, by product. Under each product heading is a complete, alphabetical listing of manufacturers who make that product. **Bold face** listings indicate which manufacturers have provided catalog data on that product in the white pages.

The Manufacturers and Sales Office Directory

The Manufacturers and Sales Office Directory (starts yellow section of each volume) lists more than 3,000 manufacturers of electronic components, materials, instruments, assemblies, systems, and key services. Provided are complete addresses, phone numbers, sales managers' names, names of application engineers, TWX numbers where applicable, selected distributors. **Bold face** listings indicate that manufacturers have provided catalog data in the white pages and that sales offices are listed.

The Distributor Directory

The Distributor Directory (yellow section, page 1594, with black edge marking) lists more than 1,000 electronic distributors and branch locations, alphabetically by distributor's name, geographically by state and city.

Need catalog information?

For complete catalog information on any product, refer to the Product Index and Directory (green section, page 9, all volumes) which provides a complete listing of all the manufacturers who supply a particular product. Those manufacturers listed in bold face with page and volume number references have provided catalog data on this product in the catalog section (white pages) where you can find the information you need. References to Volume 4 indicate the Volume 4 you received in January and which should be retained to complete your 4-volume set of EEM.

Need additional information in a hurry?

Two special telephone services are being maintained for EEM users to provide extra information you need. If you need to determine a local source of supply, just **D.I.A.L. EEM.** This toll-free service (**D**istributor **I**nformation **A**nd **L**istings), provides you with the name of a sales office or distributor in your area who can provide a needed product.
For up-to-the-minute listings of manufacturers who provide certain IC functions, **call the IC UPDATE HOTLINE.** Listings of IC functions are updated daily by manufacturers throughout the country. For information in a hurry, **just D.I.A.L. EEM** — call toll-free 800-645-9200 (in N. Y. State call collect (516) 294-0990). Or **call The IC UPDATE HOTLINE,** Dial toll-free 800-645-9201.

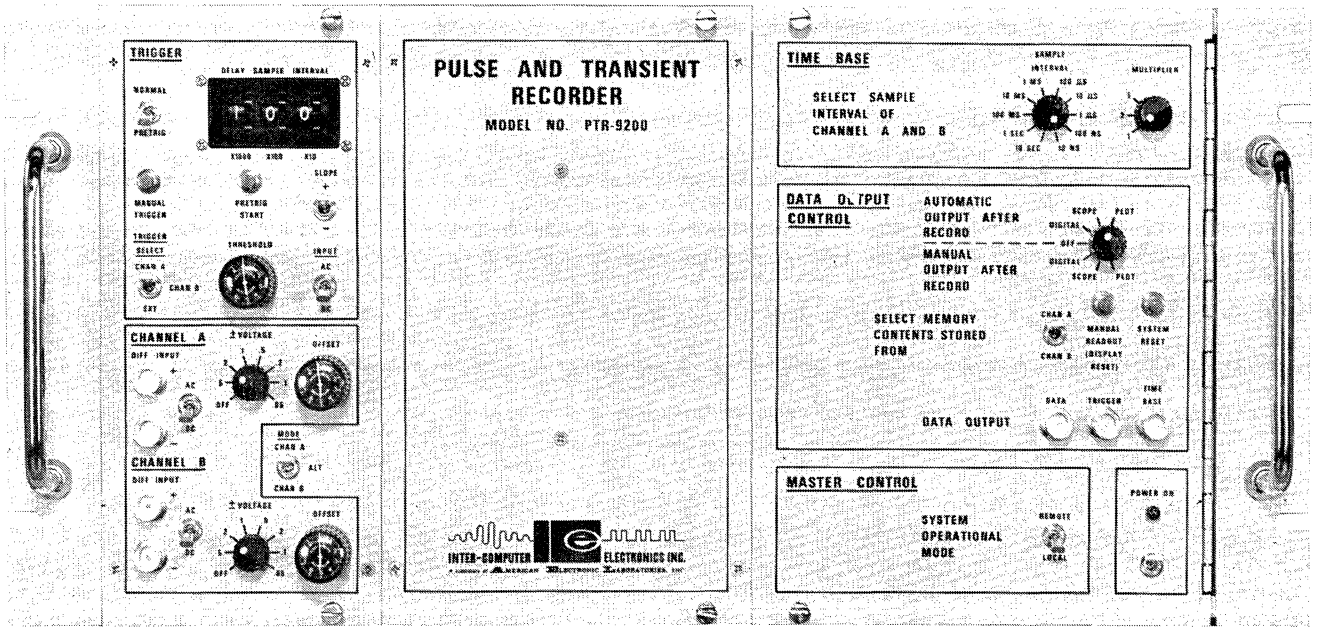
PULSE AND TRANSIENT RECORDER Model PTR-9200



Our ICE Pulse and Transient Recorder IS Better.

It's a sophisticated electronic recording instrument designed for easy operation and easier reading. Unlike similar operations which require the use of an oscilloscope with a camera and the added effort of digitizing the photo information for inputting to a computer, our PTR-9200 by-passes these steps for faster, more accurate and more efficient operation.

Our PTR-9200 digitizes the input signal directly via an A/D converter, stores the information in a high speed digital memory and at your convenience, will transfer the stored information into a computer for processing.

All of the operational aspects — sample interval, input voltage, trigger selection and data output can be under remote control.

With the capability to digitize signals at speeds up to 100 MHz with 8 bits of resolution and store over 2800 words, our PTR-9200 proves to be the most accurate and flexible recorder on the market today.

The Inter-Computer Electronics Pulse and Transient Recorder features:

- Sampling frequency range DC to 100 MHz
- High speed memory with 2,816 data points
- Records transient waveforms and repetitive signals
- Dual differential inputs ±50 millivolts to ±5 volts full scale
- Pre-trigger mode stores 110 points of baseline and leading edge of signal
- Over voltage protection up to 50 volts
- 1% DC stability over 0 to 70°C temperature range
- Complete remote control of front panel controls
- Ease of operation better than storage oscilloscope
- Analog output for oscilloscope, plotter and strip chart recorders
- Digital memory output speed from DC to 4 MHz
- Sampling interval from 10 nanoseconds to 50 seconds
- Easily interfaced to TTY, printer, magnetic tapes, or digital processors
- A flexibility that's of use to anyone involved in recording instantaneous non-repeating or repeating signals, including such diversified disciplines as:

Laser Processing	**Chemical Engineering Applications**

GENERAL DESCRIPTION

Inter-Computer Electronics' Analog-to-Digital Converter Systems bring digital signal processing to areas never before thought possible. They are able to link up real world wide bandwidth signals, and translate them into a digital language for the processing requirements of high speed digital computers.

The ultra-high speeds of Inter-Computer Electronics' converters enable it to process digital signals in radar, television, X-ray analyses in multi-channel wideband communication systems and control systems. They offer the capability to convert and communicate digital signals in the speed range of the fourth generation solid-state technology, keeping in step with the computational power of the computer, providing fast and accurate signal processing.

Inter-Computer Electronics' Analog-to-Digital Converters come in two series:

- **Series A,** which incorporates new ultra-high-speed comparators, dual sample-hold modules, digital-to-analog converters, and wide bandwith amplifiers—all designed specifically by Inter-Computer Electronics.
- **Series B,** which utilizes more conventional integrated circuit components in conjunction with high-speed circuitry — providing a basis for wide bandwith signal processing at reasonable prices.

Because many interface problems can occur at the ultra-high-speeds of its A/D converter, Inter-Computer Electronics configures modular system components of its system all packaged in shielded cases. These modular packages are offered as complete analog-to-digital conversion systems, integrating: sample and hold, analog-to-digital encoder, system power supplies, timing and control systems, and all input/output circuitry. The converters are capable of being driven either from an internal clock at the maximum conversion rate, or synchronously from an external signal source at rates up to the maximum conversion rate.

SAMPLE AND HOLD MODULES

Inter-Computer Electronics, Inc. sample and hold modules contain an ultra fast analog switch, holding capacitors, and input and output buffer amplifiers. This is a true sample and hold, and is used with Inter-Computer Electronics, Inc. high-speed analog-to-digital encoders and converters.

All sample and hold modules are available with long droop capability where a trade-off between long-term hold and repetition rate can be made.

Upon external command, the analog switch is closed and the charging capacitors charged to final value. After this acquisition interval, the charging capacitor is disconnected from the input and holds the value until the next sample pulse.

The sample and hold amplifier has a wide range of applications with analog-to-digital converters, data acquisition systems and transient analysis.

The unit is packaged in a shielded case. Appropriate signal terminations, ground planes and layout insure accurate operation in the most severe signal environments.

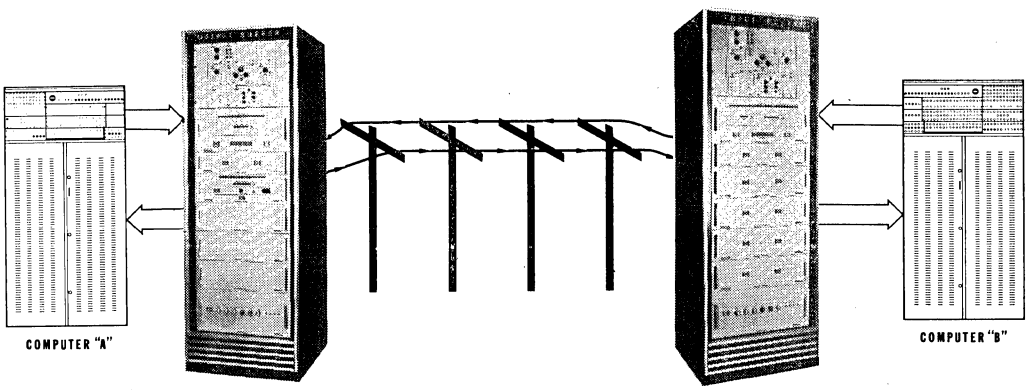
DIGITAL DATA COMMUNICATIONS EQUIPMENT

The Model 8114 Data Transmitter (Output Buffer) and the Model 8114 Data Receiver (Input Buffer) form a complete two-way data transmission link between two digital computers. Data is transmitted at a rate of 2400 bits/second on Class 4B telephone lines. A single Model 8114 Transmitter/Receiver provides 4 separate channels each having a capability of transmitting 2400 bits per second. Two separate error detecting codes are employed to verify the quality of the data transfer.

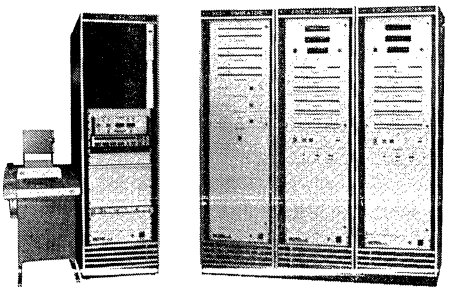


REAL TIME DATA SYSTEM

The Model 8264 Real Time Data System (EDDI III) is designed to interface with two asynchronous ECCM radars. Target data is digitized in various counters and registers and then loaded into six 160-bit shift registers. The data is then shifted out to the data transmitter and microwave link at a 1.28 MBPS rate. The data modulation scheme is split-phase change. Data is also shifted to the recorder where the tape format is determined by the program of a general purpose computer.

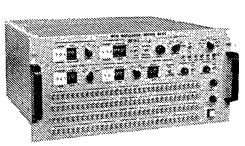
Data is received at the central computer site and loaded into a CDC-6600 computer. The central computer calculates the coordinates desired for simulated targets and provides this data to the Target Data Transmitter which transmits it back to the radar site.

The Simulator takes these coordinates and modulates a microwave source in a manner such that the radar receives target echoes at the proper position. Antenna pattern, scintillation, noise, and range loss are considered.



SIMULATION EQUIPMENT

MODEL 8435 PCM SIMULATOR



The Model 8435 PCM Simulator generates all IRIG approved formats under front panel control. This unit has frame lengths up to 999 words, subframe lengths up to 999 frames (words), and word lengths of 2 to 32 bits. Bit rates from 1 bps to 1,000,000 bps.

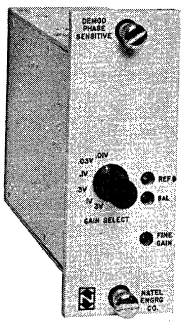
Phase Sensitive Demodulators Models D510, D610

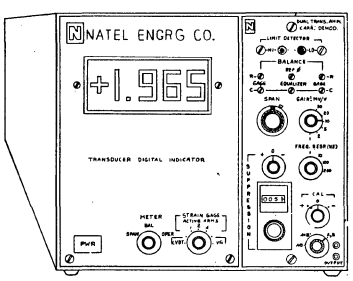
Miniature, low cost D510 & D610 carrier demodulators convert phase sensitive suppressed carrier a.c. signals to a linearly proportional bipolar d.c. output. Combining proprietary demodulator designs with integrated circuit active filter techniques provides superior accuracy, performance and reliability under military environments. This module is currently offering solutions in these areas: Antenna Position Converters, Carrier Systems, Hydraulic Valve Drivers, Phase Measurements.

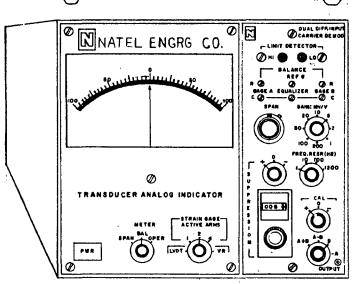


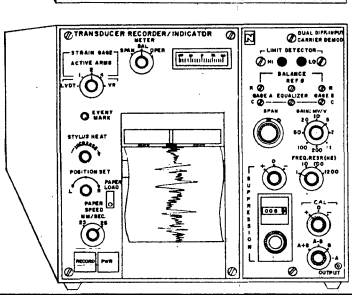
Phase Sensitive Amplifier-Demodulators Models D6116, D7116, D8116

Provides precision conversion of low-level AC transducer signals to high level linearly proportional DC outputs compatible with magnetic tape recorders, computers, controllers, galvonometers, and VCO's. When the basic transducer is either a synchro, gyro, LVDT, or strain gage, the transduction principle can be accommodated by the demodulation process of this carrier demodulator which eliminates undesireable noise.

Transducer Indicators Servo Controllers

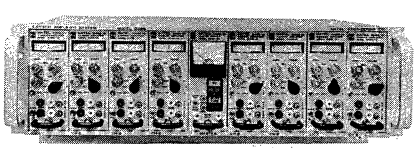






Carrier Amplifier System "N" Model 2088

A carrier amplifier system designed for use with cable-connected transducers remotely located as far as two miles from the conditioning system. "UNIVECTOR" 360° phase shift adjustment offsets any possible phase shift error due to line length, and AC type conditioning provides improved signal and noise characteristics.
The Model 2088 features 120 dB or greater common mode rejection, 0.1% accuracy and 0.1 MV noise referred to the input.



Radiation Hardened Carrier Amplifier System Model 2089

2089 RH is a carrier amplifier system specifically designed to operate in radiation and shock environments encountered in underground nuclear testing. Designed to operate with strain gages and/or variable reluctance transducers, the system is comprised of eight plug-in carrier demodulators and one master oscillator. Because of the high shock level encountered, 300 g's for 20 msec, all adjustments are accomplished with pre-selected fixed component values rather than potentiometers.

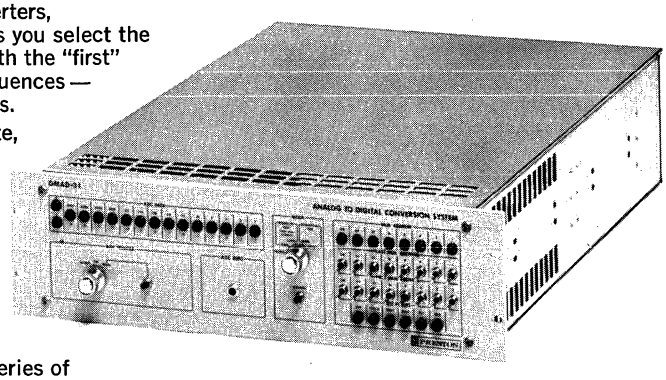
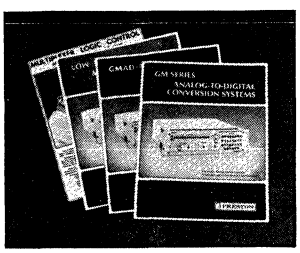
ANALOG-TO-DIGITAL CONVERSION SYSTEMS

Preston delivers the world's most reliable and complete line of Analog-to-Digital Conversion Systems—the GM Series—including the "World's Fastest ADC"—the GMAD-01!

Every model in the GM Series is designed around a complete set of compatible "building blocks"— basic sub-system components — that include plug-in Multiplexers, DC Coupled Amplifier/Multiplexers, A/D Converters, D/A Converters, and the GMC Logic Control System that lets you select the operating mode — Normal, Random, or Sequential — and both the "first" and "last" channels of short cycle "quick-look" address sequences — all from front panel switches and channel address indicators.

And every model in the GM Series is delivered complete, with integral power supplies and all of the necessary input and output control signals to match your special interface requirements. And it's all assembled in a standard 19" wide rack-mountable chassis only 5¼" high.





To obtain information on the entire Preston GM Series of ADCs, ask for our technical brochures that include the GM Series block diagrams, timing charts, and examples of overall system performance for many typical GM Series ADC Systems. We'll send you price, delivery and specifying information, too!

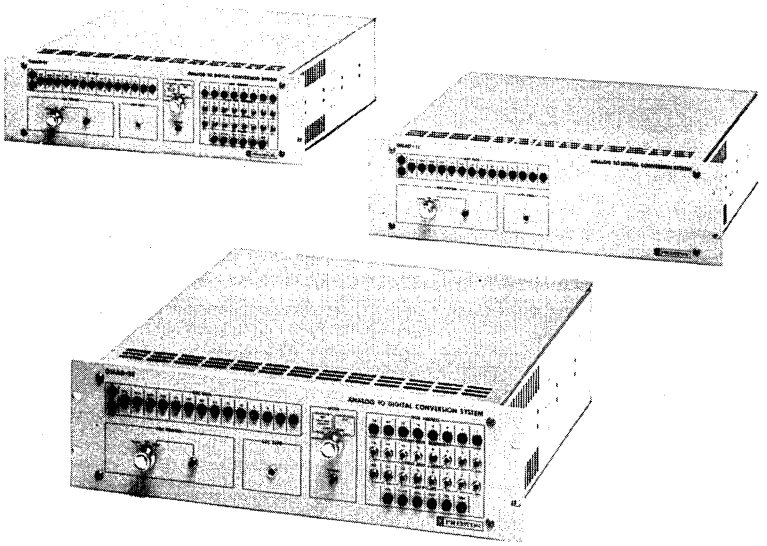
LOW-LEVEL MULTIPLEXERS AND PROGRAMMABLE GAIN AMPLIFIERS



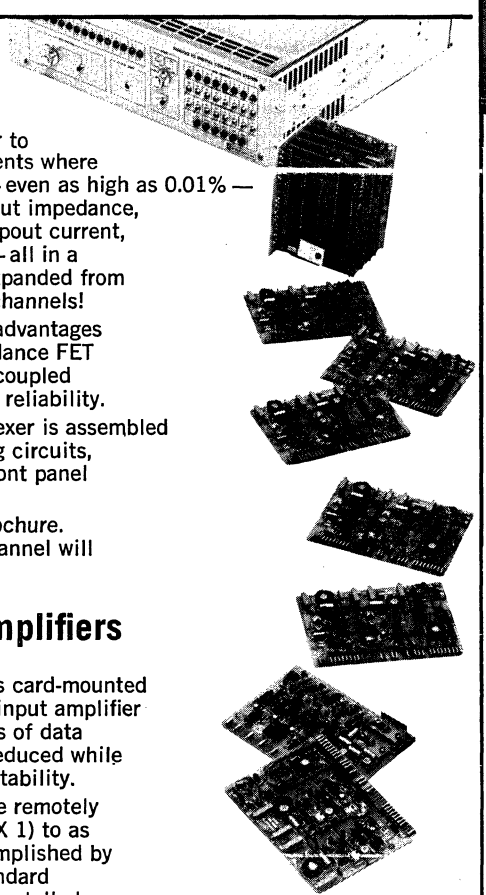
Low-Level Multiplexers

Preston's LLM Series of Low-Level Multiplexers provide the ideal answer to millivolt level multiplexing requirements where exceptional accuracy and linearity — even as high as 0.01% — must be combined with very high input impedance, low crosstalk, very low drift, low pumpout current, and excellent temperature stability — all in a single, reliable system that can be expanded from as few as 16 channels to over 2000 channels!

Preston has achieved all of these advantages by combining high speed, high impedance FET switches with a special, transformer-coupled input for vastly superior stability and reliability.

The LLM Series Low Level Multiplexer is assembled with its own power supply, addressing circuits, and GMC Logic Control System for front panel channel selection.

Ask Preston for the LLM Series brochure. The performance and low cost-per-channel will come as a pleasant surprise!



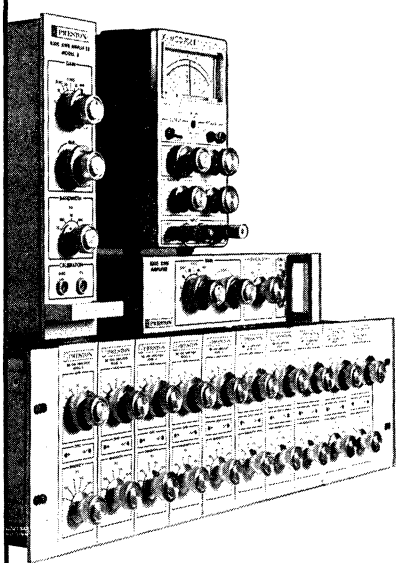
Programmable Gain Amplifiers

With a single Preston GMPG Series card-mounted Programmable Gain Amplifier as the input amplifier for as many as 64 channels, the costs of data acquisition systems can be sharply reduced while still maintaining high accuracy and stability.

The gain of these amplifiers can be remotely programmed in 10 steps from unity (X 1) to as high as 2500, with gain control accomplished by direct binary or switch control at standard digital logic levels! And they can be installed in any of Preston's GM Series of A-D Conversion Systems!

For complete information on how the GMPG Series can provide improved performance, greater system flexibility and lower cost-per-channel, give the engineers at Preston a call!

PRESTON Builds the World's Most Accurate Amplifiers, too!



The 8300 XWB Series Amplifiers provide greater accuracy than any other amplifier under all operating conditions! Every model has improved Common Mode Rejection, Temperature Stability, Overload Recovery and reduced "Pumpout Current," plus many combinations of accuracy, linearity and bandwidth for all the versatility you'll ever need!

And there's also the new MD-1000 Series of Wide-Band, Direct Coupled Amplifiers that extend the frequency range up to 1 MHz, and combine high performance and low price!

Sangamo Recorders. For people who need 32 channels of data. And people who don't.

When you tackle a job that calls for 32 channel recording, you've pretty well got to come to us. We make the Sabre V, the only IRIG all-band portable tape recorder on the market with up to 32 channels on one-inch tape.

But not all jobs need the Sabre V, and we want you to depend on Sangamo anyway. So we also offer the Sabre III, Sabre IV and the Sangamo/Tandberg TIR 100— newest addition to our line.

Sabre III gives you lab quality and total bandwidth convertibility in a compact all-band portable.

Sabre IV is our laboratory model that's setting new standards of accuracy in recording and reproduction.

Both Sabre III and IV let you process data up to 2.0 MHz in the direct mode, 500 KHz in the FM mode, and with full serial and parallel PCM capability. They feature total bandwidth convertibility, too.

The Sangamo-Tandberg TIR 100 does almost everything you'd expect a $16,000 recorder to do but costs under $4,500. It features four channels including one for voice or data recording, a built-in CRT monitor and a portable size smaller than a cubic foot.

That's four Sangamo recorders in all. One of them is bound to do the best possible job on your data recording job— whatever it is.

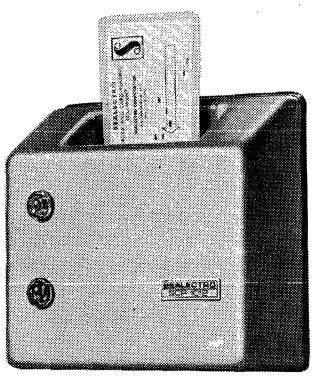
SANGAMO RECORDERS

THE INNOVATORS IN TAPE INSTRUMENTATION

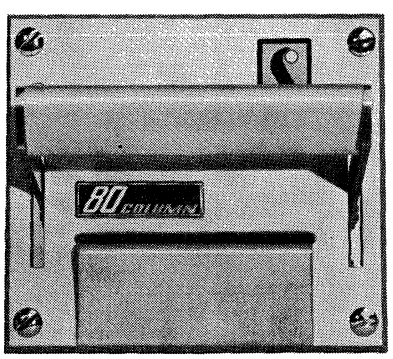
SEALECTRO CARD,



10 x 10-10 x 12 BADGE READERS

Completely automatic Badge Readers that accept standard IBM and Friden Type Badge cards in 10 x 10 or 10 x 12 formats. Ideal for personnel identification, production control and process control operations.

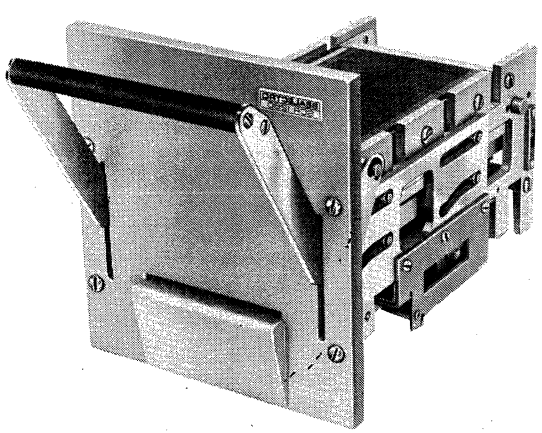
Go/no-go lights immediately indicate if the card is inserted correctly. No contacts actuate until the card is properly inserted. Remote solenoid-operated contacts sense hole patterns and read. Read function is automatically held until feedback from system releases contacts and card is automatically ejected. Flexible output wiring allows bussed or discrete contact interface connections.



12 x 80 CARD READER

The Sealectrocard Card Reader is designed to be completely compatible with all standard 12 x 80 TAB type punched-cards. This unit combines features which provide maximum reliability, convenience and economy in programming. The 12 x 80 Sealectrocard is ideally suited as peripheral equipment for a wide range of computers or as a programming device. Programs consisting of up to 960 bits of information can be read instantly from conventional punched-card formats. Features include:

- Remote contacts with double contact wiping surfaces.
- Positive mechanical lockout if a card is mis-oriented.
- Wide choice terminations.
- Simple, fast operation even by unskilled personnel.



12 x 51 TAB READER

Accepts and reads standard 80 column TAB card, but limits read area to 51 columns, providing 612 bits of information. Ideal for data acquisition in production control and other terminal operations of data processing systems not requiring full 960 point readout.

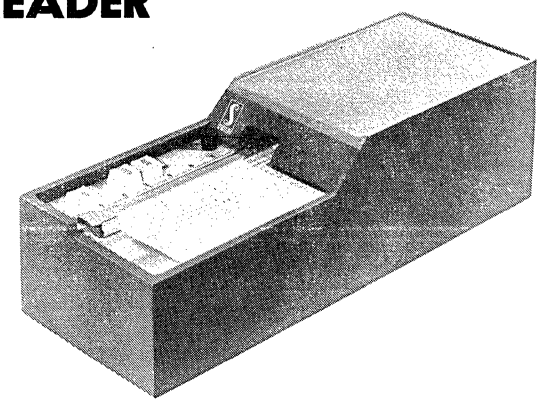
Completely foolproof. Correct orientation and positioning of card electrically interlocks operating handle eliminating faulty readouts. Card is inserted in insertion slot, handle pulled down to read position, and unit is in operation.

Utilizes same electrical contact assembly as 12 x 80 Reader. Can be bussed vertically or horizontally. It may be used with completely discrete circuitry for each of the 612 points.

BADGE & TAB READERS

INCREMENTAL CARD READER

- Completely solid state for maximum reliability.
- Column-by-column reading. Up to 80 columns per second.
- Sync pulse provided for each column for complete synchronization.
- May be stepped single column by external signal.
- Reads only desired number of columns.



Using a 12-station opto-electronic system and an incrementally moving card to replace the 960 individual contacts conventionally used in static 80-column Hollerith card readers, Sealectro has produced an extremely accurate and reliable incremental reader that programs test equipment, chemical processes, food processes, machinery, and many types of computers at a fraction of the investment formerly required.

The Model DS-80 compact single card incremental reader is a complete, self-contained unit with interface and performance characteristics offering compatibility with most computers and communication systems. The unit has the ability to read Hollerith coded information, one column at a time, upon command, up to a speed of 80 columns a second. All mechanisms and circuitry are modular, permitting complete interface compatibility. Among the features of the DS-80 are: single step function with return to start position from any column; automatic advance with automatic return; sync output with read control; and three variable speeds determined by the application. All control functions have remote operation capability.

The card is read optoelectronically. A phototransistor array senses light through the punched holes in the card.

CUSTOM ENGINEERED READERS

In addition to the standard Hollerith code reading devices, Sealectro supplies readers for sensing other data media.

A line of OCR readers is available for sensing digital information based upon bar codes. These devices feature serial output, with a constant speed document transport and solid state, reflective sensing. Accurate and reliable readouts may be made with a differential of 3:1 between data and non-data. Designs are flexible, permitting various size cards and tickets, with outputs paralleling several digit bits, depending upon the physical width of the document.

Also available from Sealectro are magnetic stripe readers, custom engineered to your particular requirements. These readers meet all the specifications of the ABA code.

In addition to the above, Sealectro provides readers with additional functions, such as reject action, mechanical stamping of the document, etc.

Submit your particular requirements for a proposal.

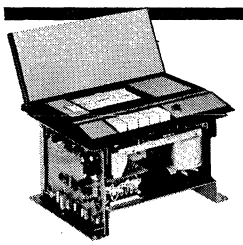
TELEX® TERMI SERIES

digital cassette recorders and memories

TELEX—world's leading designer and manufacturer of recording equipment—has drawn upon thirty-five years of expertise to create the new TERMI Series of digital cassette memories — basic transports to complete memory systems which are pre-engineered for virtually every modern digital application. TERMI equipment is ideally suited for:

- Point-of-Sale
- Data Capture
- Peripheral Storage
- Data Communications
- Keyboard-to-Tape
- and many other applications.

TELEX provides important mechanical enhancements, read/write subsystems including power supplies, digital control interfaces and parallel, NRZ, or serial start-stop interfaces to supplement basic TERMI transports. Detailed information is available for each, and will be forwarded upon request.



TERMI 137 SERIES
incremental cassette memory systems

The Termi-137 Series provides reliable, flexible, low-cost data storage with optimum reliability and unique configuration flexibility. Serially record and reproduce data at 500 bits-per-second, with full manual control for all modes of tape operation. With a packing density of 250 BPI, a standard Philips C60 cassette provides a capacity of 8.5 x 10^5 data bits. 137 Series machines will:

- Record/Reproduce incrementally at 10, 15 or 30 8-bit characters-per-second in serial or parallel format.
- Provide speed selection which permits changing operating speed to 10, 15 or 30 character record/play.
- Interface readily with any standard terminal device or computer system.

TELEX's unique incrementing mechanism results in unusual reliability; a typical character error rate of less than 1 in 10^5 can be achieved without sacrificing O.E.M.-oriented economy.

Silicon solid-state circuits and modularity provide a wide range of possible configurations without appreciable differences in unit size or cost.

TERMI 138 SERIES
digital cassette memory subsystems

TERMI-138 Series subsystems provide O.E.M. users with exceptional reliability. The ultimate in low-cost tape storage and complete configuration flexibility. Four models are available.

- TERMI-138B, deck only with optional mechanical enhancements
- TERMI-138S, complete read/write subsystem
- TERMI-138P, parallel I/O subsystem
- TERMI-138E, featuring EIA RS-232-C serial start-stop interface

Each model includes Telex's 138 transport specifically engineered for digital applications which is constructed on a precision-bored, die-cast frame to ensure accuracy and achieve longest possible operational life.

TERMI-138B

Model 138B operates bi-directionally at speeds from 2 to 15 ips. Nominal fast/reverse speed is 60 ips, which will completely rewind a standard Philips C60 cassette in 60 seconds. Sensors provided include File Protect, Clear Tape, Low Tape and Cassette-in-Place. Includes a two-track, digital grade magnetic head or, optionally, a two-track read-after-write head. Additional options include: DC Servo-controlled capstan motor to replace standard hysteresis synchronous motor; electrically-controlled capstan speed change in 2:1 or 4:1 ratio, and DC Servo-controlled reel drive motors.

TERMI-138S

Model 138S extends the basic 138B through the addition of read/write electronics with NRZ data interface, control logic and optional power supplies to make the Model 138S a complete functional memory subsystem. Control is accomplished by means of four mode lines for simplicity of interface. Dual channels, read-after-write, high-speed IRG search, read-only and write-only features are among available enhancements.

TERMI-138P*

The Model 138P is a bi-directional, 800 BPI phase encoded unit with up to 16 bit parallel interface. Data transfer can be accomplished at up to 12,000 bps, depending upon tape speed. Model 138P consists of two major modules; a precision tape transport and complementary electronics package. May be configured for synchronous read/write, synchronous read/asynchronous write or incremental read/write operation to suit application. Capstan speeds from 2 - 15 ips; fast forward/reverse speed of 60 ips, top or slot loading.

TERMI-138E

Model 138E is a character (byte) oriented incremental memory designed for general-store and forward applications in conjunction with low-speed data terminals and input/output devices. It is also ideal for data capture applications where data is transferred to or received from remote equipment. TERMI-138E can directly replace paper tape reader/punch units, performing all the same functions (within prescribed speed limitations), while simultaneously offering edit, character search and general convenience in handling and operation. TERMI-138E operates at selectable data rates of 10, 15 or 30 CPS.

These circuit innovations have now made pointer-type meters both economical and practical for production. Pointer-Type Meters are presently available in three frequency ranges, with accuracy and stability as great as 0.3 Hz in the 45 to 65 Hz ranges. The input voltage for all units is 115 ±15Vac, with power consumption approximately 2 watts. Operating temperature range is 0° to 150°F.

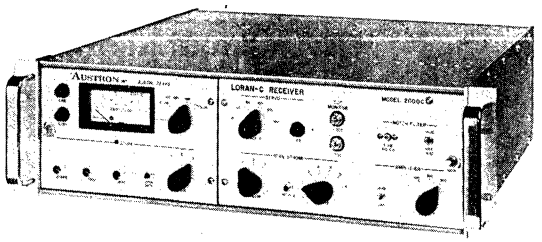
TIME/FREQUENCY INSTRUMENTATION

AUSTRON, Inc., offers a complete line of instruments for timing and frequency calibration and control. Designed for utilization of Loran C transmissions and/or atomic standards, AUSTRON instruments find applications in communication network synchronization, time synchronization, epoch timekeeping, frequency calibration and related fields. Typical instruments are the



MODEL 2000C LORAN RECEIVER

The Model 2000C receives and automatically phase tracks any Loran C or Loran D chain for timing and frequency calibration applications.

MODEL 3100 PHASELOCKED SYNTHESIZER SYSTEM

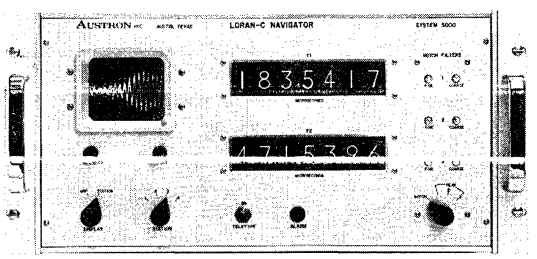
The Model 3100 Systems utilizes Loran C transmissions as a reference for synthesizing clock rate frequencies for communication network synchronization.

MODEL 2055A PHASE MICROSTEPPER

The Model 2055A accepts precision time base frequencies of 1 MHz or 5 MHz and is designed to provide selectable phase rate or frequency offset corrections.

NAVIGATION INSTRUMENTATION

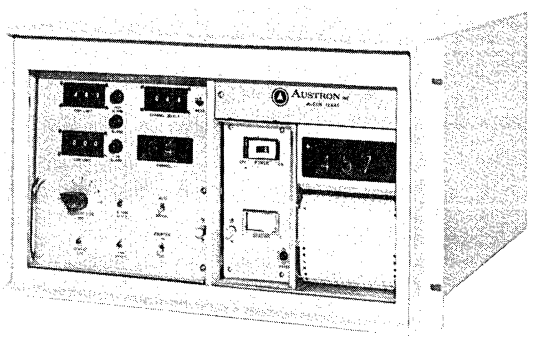
The AUSTRON Model 5000 and Model 5010 Loran Navigation Systems are designed specifically for marine applications where versatility and precise positioning accuracy are critical. The 5000/5010 hardware is mated to a mini-computer and thus provides an integrated hardware/software system capable of both Loran C or Loran A (optional) operation. Software options allow operation in either the normal hyperbolic mode or, with the addition of an atomic standard, the range-range mode. Additional software sub-routines enable cross chain navigation between different Loran chains, coordinate conversion, course correction computations and Loran D tracking.



The Model 5000 System, when operating in the Loran C mode, will typically provide fixes within 300 feet of a predetermined location on the earth's surface. Return-to-position accuracy is typically 100 feet or better. The Model 5010 System is designed specifically for integration with satellite navigation systems for provision of velocity up-date information during a satellite pass or for obtaining fix information between satellite passes.

DATA LOGGING INSTRUMENTATION

The AUSTRON Model DL-1200 and Model DL-2210 Digiloggers are complete input scanning analog to digital converting data acquisition instruments, with 12 column printer, which allows continuous, periodic, or demand logging of multiple analog inputs directly in engineering units. The Model DL-1200 accepts up to 50 analog inputs with the DL-2210 accepting up to 1000 inputs. Both instruments accommodate linear input voltages from 0 to 10 mv, 100 mv, 1 volt, or 10 volts full scale. Standard linearization and cold junction compensation circuitry is available for logging of thermocouple inputs directly in °C or °F. Input circuitry accommodating RTD's, strain gages, pressure transducers and other non-linear devices is also available.



The AUSTRON Digiloggers find numerous applications in air and water pollution monitoring systems, process control, production testing and laboratory instrument monitoring.

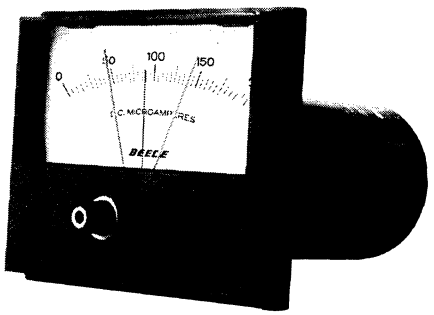
Indicating pyrometers—As "prime source for temperature instrumentation," Beede offers, in addition to the controlling pyrometers described above, a complete range of indicating panel-meter pyrometers in a wide choice of case styles in widths from 2″ to 8″. Clear-reading mirror scales eliminate parallax error, and may show both Fahrenheit and Celsius units.

Meter Relays



The Beede non-contacting control-meter relay combines a high-torque d'Arsonval meter with an adjustable photoelectric sensor, switching circuit, and output switch. As the monitored variable passes the adjustable setpoint, an output relay is either energized or de-energized. Either one or two adjustable setpoints are available.

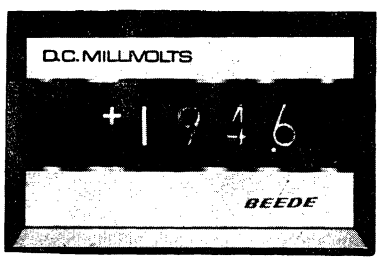
Beede Digital Panel Meters

. . . many "special" features in standard catalog models



The basic Beede DPM is a completely packaged unit, including power supply, requiring only signal and line connections for immediate use as a deluxe component of advanced equipment. Many of the standard models fit into existing instrument circuits which have previously used pointer-type panel meters, without the necessity for circuit modification.

Beede DPMs have 3½-digit Nixie™ display (1999 maximum readout) with automatic polarity indicator and selectable decimal-point position. All are enclosed in a rugged, dust-proof diecast aluminum case with terminal connections sealed against tampering or damage. Rear terminals for signal and power available two ways: either as a minimum number of screw connectors for easy installation by unsophisticated workers; or as two extended soldering strips offering many additional functions including BCD (binary-coded decimal) output for driving printers and other equipment.

Standard catalog models stocked for immediate delivery are designed for direct current in readout ranges as low as 0-19.99μA up to 0-1.999A, or for DC voltage in ranges from 0-199.9mV to 0-1000V. AC voltmeters are also available.

Many standard Beede DPMs contain features generally regarded as "special" elsewhere throughout the industry. Such features as suppressed or elevated ranges, low-voltage amplification, multi-range display, resistance operation, DPM setpoint, linearized reading of non-linear signal, indicator lights, variable or one-time sampling, etc. are cataloged in Bulletin DM-2 for ready availability with minimum wait on either large- or small-quantity orders.

As with any Beede panel meter, the front-panel appearance may be customized to the user's requirements: readout may appear in any engineering units (rpm, gal/hr, etc.), and decorative colors of bezel and face mask behind glass window may be specified, as may customer's logo.

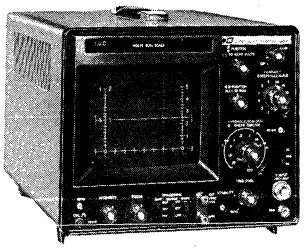
B & K OSCILLOSCOPES WITH EXCLUSIVE CALI-BRAIN® FEATURE



Model 1465 with Triggered Sweep

CALI-BRAIN–another B & K first! Special CRT screen has 2 scales, one on each side; selecting your vertical attenuator range automatically lights up the correct scale and produces a digital readout of full scale volts above the screen. To read peak-to-peak volts faster and more accurately, here's all you do: (1) Get pattern on screen; (2) pull out CALI-BRAIN knob (vertical position control); this collapses the horizontal sweep and shifts the resulting vertical line to the proper scale; (3) position the compressed waveform on the base line; (4) read the peak-to-peak volts directly off the screen! 100% solid-state. 10 MHz bandwidth, triggered sweep, automatic sync. With tilt stand. 9x10x17". For 105-125 VAC, 50-60 Hz. Wt., 27 lbs.

RF ADMITTANCE BRIDGES — 1 MHz TO 100 MHz

These bridges measure two-terminal parallel capacitance and conductance from 1 to 100 MHz. Seven crystal-controlled test frequencies of 1, 5, 10, 20, 30, 50, and 100 MHz are supplied as standard on all versions. Other frequencies between 1 and 100 MHz can be provided to special order. Good resolution of low conductance values makes loss measurements possible on many high Q diodes, varactors, and capacitors. The bridge balances accurately with the low test levels required for measurements on most solid state devices. Internal and external dc bias are standard on all models.

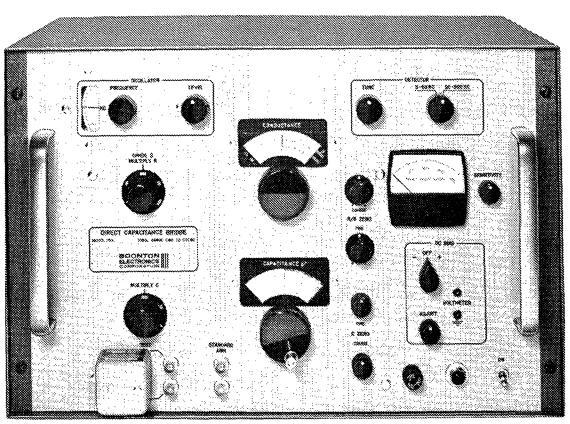
CAPACITANCE BRIDGES

MODEL 75C

CAPACITANCE BRIDGE — 5 kHz TO 500 kHz



The Model 75C is a precise, high resolution bridge which makes direct reading measurements of capacitance, conductance, and parallel resistance over a frequency range that is continuously adjustable from 5 kHz to 500 kHz.

Because this is a three-terminal instrument, remote measurements may be made via shielded cables, and the specimen may be mounted in a test fixture or in an environmental chamber without incurring errors resulting from stray capacitance from either side of the test to ground. In addition to the test connections, the standard arm of the bridge is also accessible through front panel BNC connectors, permitting use of external capacitors for differential or comparison measurements.

MODEL 75D

CAPACITANCE BRIDGE — 1 MHz

This bridge provides 3-terminal measurements of capacitance and conductance allowing remote connection without errors due to stray capacitance to ground. When measuring the higher capacitance values remotely, the effects of cable inductance may be negated by use of the Test Terminal Extender Model 71-6A. Makes 2-terminal grounded measurements using Adapter Model 75-7A. Inductance is read by conversion from equivalent capacitance measurement. The null detector is extremely sensitive yet shows balance direction from the most extreme off-range setting. An additional differential detector mode allows capacitance or inductance sorting of components. Internal and external dc bias.

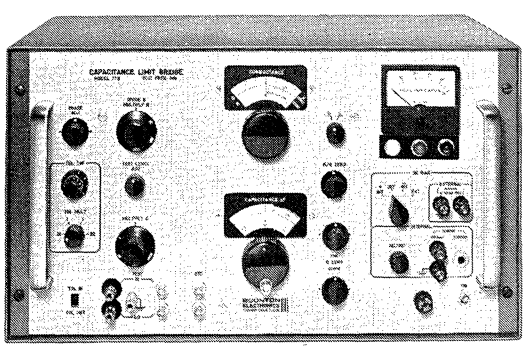
Dual External DC Bias: HI to GND and/or LO to GND; differential, ±400 V max.
Internal DC Bias: HI to LO; −6 to +150 V.



MODEL 77B

CAPACITANCE LIMIT BRIDGE — 1 MHz

Performs automatic, high-speed, dual or single limit tests, or conventional manual measurements of capacitance or inductance. In automatic mode, test is insensitive to specimen loss. "High," "Low," or "Go" test decisions are indicated by front panel lamps as well as by continuity closures for actuation of material handling equipment. 3-terminal arrangement permits remote measurements at the end of coaxial cables without incurring error due to cable capacitance to ground. When measuring the higher capacitance values, the effects of cable inductance may be negated by use of the Capacitance Test Terminal Extender Model 71-6A. Two-terminal grounded measurements possible with 77-7A Adapter. Nominal capacitance values are set by the main capacitance balance dial in conjunction with its multiplier switch. A multi-turn control and range switch are used to program the desired tolerance. Operates with low test level. Built-in dc bias supply; provision for external bias.

CAPACITANCE METERS

MODEL 72 SERIES

CAPACITANCE METERS — 1 MHz

The Model 72 Series of solid-state capacitance meters provide rapid, accurate, three-terminal and differential measurements of capacitance over a wide range. They are particularly well suited to measurements of semiconductor devices because of the low test level employed (15 mV rms), and the provision for application of dc bias to the test.

The phase-sensitive detection system used allows the capacitance of even low Q devices (as low as Q = 1) to be measured with little reduction in accuracy. Range switching is accomplished by a combination of logic-controlled reed relays and diodes. Range selection is by front panel switch or remote logic-level inputs.

Both models provide a highly linear, high-speed, dc analog voltage output corresponding to the meter or display indication. In addition, the 72AD has BCD outputs, TTL compatible. Autoranging of this model is available as an option.

Adapters are supplied for coaxial-cable connection to a remote test fixture, and for direct attachment of wire lead components. As a three-terminal instrument, the Model 72 is relatively insensitive to the cable shunt capacitance from either side of the test to ground.

TRUE RMS VOLTMETERS

MODEL 93 SERIES

The ideal choices for accurate digital or analog measurements on distorted sine-waves, complex waveforms, pulse trains, and noise. Both units have full remote control and linear dc output for converter applications. The digital version offers additional accuracy, coded outputs, and automatic ranging plus a dBm display with 0.01 dB resolution. Bandwidth is a full 10 Hz to 20 MHz for both models even on the most sensitive 1 mV fs range.

The 93A and 93AD both cover twelve AC voltage ranges from 1 mV full-scale to 300 V full-scale. The 1 mV full-scale range provides unmatched sensitivity for low-level applications—100 μV in the case of the 93A, 300 μV for the 93AD. SIGNAL GENERATOR

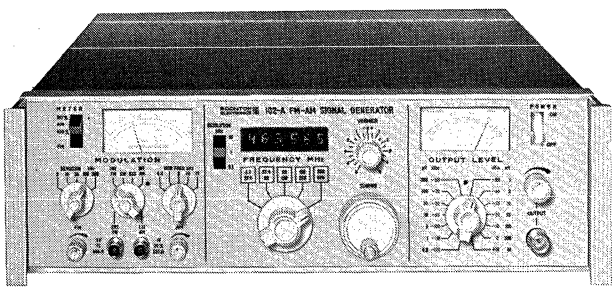
MODEL 102A

FM/AM — 4.3 TO 520 MHz



The 102A FM/AM Signal Generator includes the most-wanted generator features in a single solid-state unit, at a reasonable price. Excellent stability is obtained by deriving the output frequencies from an unswitched, inductance-tuned VFO with mixing, dividing, and multiplying techniques, using PIN-diode electronic bandswitching and band-pass filters. The 6-digit LED frequency display can be switched for 100 Hz, 1 kHz, or 10 kHz resolution; this, together with a smooth dial drive and electronic vernier control, makes precise frequency setting simple.

Both FM and AM are characterized by wide range, low distortion and phase shift and accurate true-peak monitoring. This gives the 102A broad application in the mobile radio, entertainment, navigational-aids, telemetry, components, and communications fields.

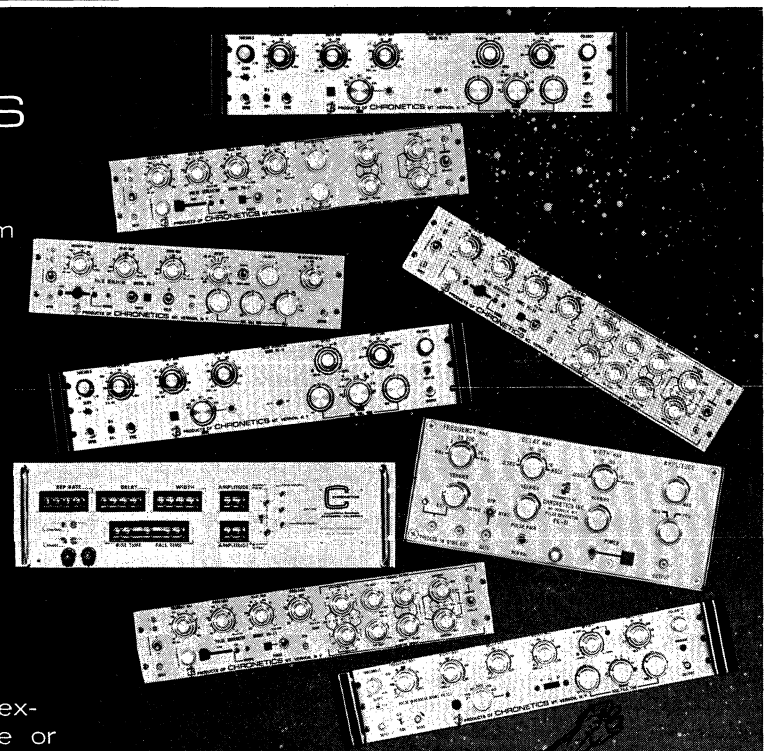
CHRONETICS



Advanced Pulse Generators from CHRONETICS: The most versatile, sophisticated, high performance pulsers in the field. State of the art circuit design, meticulous construction for reliable quality. Performance and flexibility second to none. Thirteen standard models for virtually every need.

Repetition rates from 0.1 Hz to 100 MHz, output amplitudes from 0 to ±100 volts or ±2A, rise/fall-times of less than 2 ns, wide dynamic ranges, high duty cycles, bipolar outputs, etc. are all available on standard instruments.

Chronetics' Pulse Generators are exceptionally flexible. All provide single or double pulses of either polarity, single-shot, pulse bursts. Bipolar outputs and current/voltage modes are available. Usually prf, amplitude, risetime and falltime, width, delay and DC-offset are independently and continuously variable.

"Total Pulse Control" and price/performance engineering make CHRONETICS' Pulse Generators the best buys in the field. Prices begin as low as $395* for the compact, rugged, high-performance PG-11A. Sales/Service is on a world-wide basis with field offices near you.

CURTIS

ANALOG ELAPSED TIME INDICATORS

... Smallest size, lowest cost, AC or DC, any voltage

How they work — The patented Curtis Ampere Hour Meter is basically a mercury microcoulometer fabricated from precision bore, glass capillary tubing filled with two columns of mercury separated by a small electrolyte gap. Application of pure or pulsed DC signals to electrodes inserted in the mercury causes mercury at the anode to be electrochemically transferred across the gap to the cathode at a time rate proportional to the current. The gap moves along the tube length as a function of the current-time integral. A constant-current supply provides a precision timing device.

TYPICAL APPLICATIONS

Warranty — Low-cost meters for warranty of equipment based on both actual usage, and calendar period.

Reliability Engineering — Provides mean-time-to-failure or sub-system replacement time without costly, unreliable logging.

Test Equipment Utilization & Calibration — Provides calibration on actual hours of use with savings up to 50% compared to calendar-basis programs. Substantial savings in capital investments can be realized with accurate utilization data on test instruments, tools and equipment.

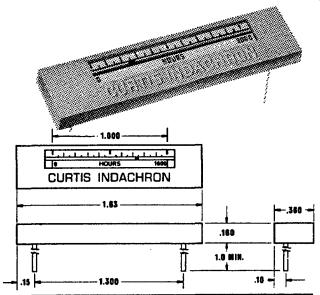
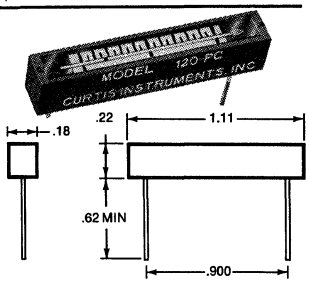
L Series Curtis Indachron™
Used on OEM equipment as a very low-cost means of validating warranties and for P.M. scheduling. Under $2.00 each in production quantities. AC and DC Models. Various time scales and electrical ratings. Can be mounted on printed circuit cards or direct to chassis with adhesive strips.



120-PC Series
Radial leads for installation directly on printed circuit cards for "mean-time-to-failure" or preventative maintenance scheduling. Can be instrumented from available DC voltages for any time scale by use of series resistor. Full scale of .65 inches = 4.16 milliamp-hours.



620 PC, 620N Series, MIL Type

The Curtis MIL type analog timers are made in two configurations. The 620N Series meet MS90386, and are now available in 5V and 15V, as well as 28V DC and 115V AC models. The 5V and 15V units directly answer the long felt need for an elapsed time meter than can be powered **directly** from voltages available within the box, precluding the necessity of special wiring for the ETI. The units also provide dramatic economies over the older electromechanical types. The 28V DC version provides for internal regulation over the complete aircraft power range, and the 115V AC device is truly insensitive to variation in line frequency.

The 620 PC Series meets the MS-3311 (AS) and was specifically designed for repairable modules and subassemblies, is very low cost and installs directly on PC boards.

CP-3 Series
New low cost monitor for P/M scheduling and other applications requiring a simple means of reset to zero in the field. AC or DC. Scales for any type of scheduling.

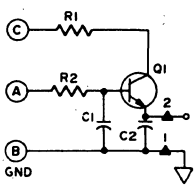
The Heavyweight says reduce system costs

There are hundreds of pages in our new I.C. Logic Card Handbook to help you lower costs — not just card costs but *total system costs.* As an example — there are probably more function-cards illustrated and all with Dynamic Decoupling*, than in any other single logic card source. Function cards means less cards, less back plane wiring, less testing — and *less system costs.*



Dynamic Decoupling**™ is a Datascan exclusive — it's a circuit right on the card which eliminates high and low frequency noise for extremely reliable system operation. You get a clean 5V DC power bus ***on each card — reducing system costs by eliminating system debugging.

Our many services to reduce costs start with letting you know what we have to offer — ***get your own copy of Datascan's new Logic Card Handbook*** — and see all the DTL, HTL (for high noise environment) and TTL circuits you don't have to design.

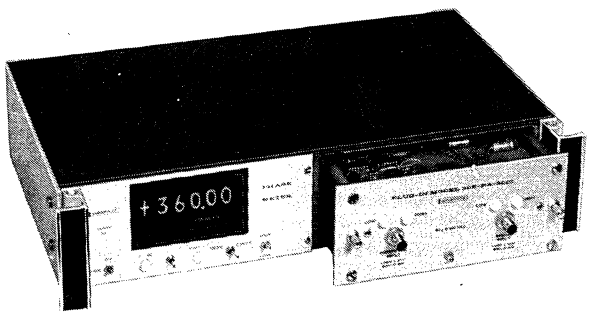
SERIES 305
HIGH ACCURACY PHASEMETERS



The Series 305 Phasemeters produced by Dranetz Engineering Laboratories, Inc. incorporate a totally new series of advances in phasemeter technology to overcome the problems inherent in typical phase measurements. Dranetz's quality craftsmanship has made the 305 the finest, most accurate phasemeter available today.

FEATURES

- No Hands Operation
- ±0.1° Analog and Digital Accuracy; 0.01° Resolution
- Plug-in Concept for Flexibility
- Fully Automatic or Programmable
- Rejects Harmonics and Noise
- Wide Frequency Range — 2 Hz to 11 MHz

FLEXIBILITY THROUGH PLUG-IN CONCEPT

The unique plug-in concept of the 305 Phasemeter offers the user a wide choice of characteristics. Standard mainframes are available with analog readout, with and without digital readout and display to 0.01° resolution, and with a variety of programmable features. In addition, special mainframes and plug-ins can be provided to meet virtually any phase measuring application.

WIDE FREQUENCY RANGE

The basic mainframe provides a direct frequency coverage of 2 Hz to 700 kHz with a high degree of accuracy. By the use of frequency converting plug-ins such as the 305-PA-3005, standard units can handle frequencies up to 11 MHz. Special units can be provided for higher frequency.

NO HANDS OPERATION

The Series 305 Phasemeters require no controls or adjustments by the operator. These units are also equipped with several significant automatic features. These include automatic selection of angle range, automatic sensing of leading or lagging angle, automatic selection of the output time constants, and automatic setting of AC gains. High stability of the DC output assures a drift of less than 0.1° over a 30 day period.

HIGH ACCURACY

High accuracy (better than ±0.1°) is accomplished by the use of precision mainframes in conjunction with carefully designed plug-ins. Mainframes exhibit precise zero crossing detection, excellent angle-to-DC conversion linearity (better than ±0.02°), and outstanding DC stability. Plug-ins are designed for accurate conversion of sine waves to square waves through the use of carefully controlled amplifier circuitry, use of gain autoranging where necessary, and well engineered mechanical layout of components.

INSENSITIVITY TO INPUT LEVEL

Series 305 plug-ins are available with an accuracy of better than ±0.1° even with independent input level variations of 60 dB. Details of typical accuracy are shown in the plug-in section.

NON-AMBIGUOUS ANGLE READINGS

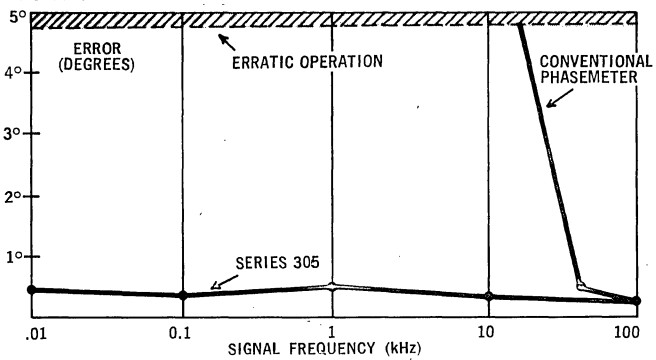
The Series 305 avoids the ambiguity of conventional phasemeters in reading angles close to 0° or 180°. An automatic system selects the appropriate angle range (i.e., 0° to ±180° or 0° to +360°) such that no angle falls within 15° of either end of a range.

OUTSTANDING REPEATABILITY AND STABILITY

Repeatability of Series 305 phasemeters is better than 0.03°. High stability is an outstanding feature, and the DC output drift is less than 0.1° over any 30 day period.

NOISE IMMUNITY

Unique patented circuitry minimizes noise errors and makes possible accurate phase measurements under noise levels where other phasemeters become completely useless. The accompanying curve compares the phase error of the model 305 with that of a conventional phasemeter with broad band noise in both channels.



PHASE READING ERROR VS SIGNAL FREQ.
FOR GAUSSIAN NOISE (FLAT TO 5 MHz)
IN BOTH CHANNELS FOR S/N = 10

PROGRAMMABLE OPERATION

Standard mainframes are provided with rear connections for over-riding the automatic time constant and angle range selectors by relay contact closures. Options are provided for control by DTL and TTL logic.

DIGITAL READOUT

In addition to analog DC output, standard mainframes are available with up to 5 digit panel readouts (i.e., 0.00° to ±180.00° and 0.00° to +360.00°) and BCD outputs for each digit. Front panel controls are available for zero and full scale adjustment of digital readouts.

ABILITY TO REDUCE HARMONICS

The 305 is designed to reduce significantly the errors due to even harmonic distortion without the use of filters. The accompanying curve compares the error due to even harmonic distortion (maximized for worst case harmonic angle) on conventional phasemeters and on the model 305. (Odd harmonics in-phase with fundamental contribute no error.)

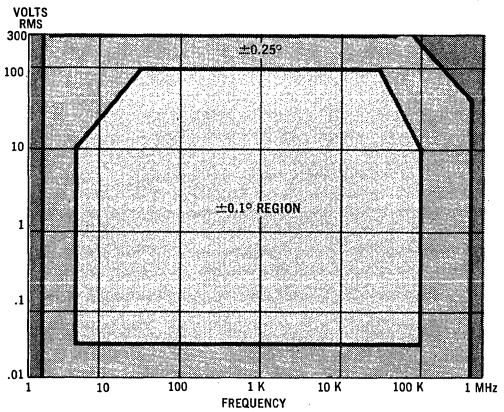
SERIES 305
HIGH ACCURACY PHASEMETER PLUG-INS

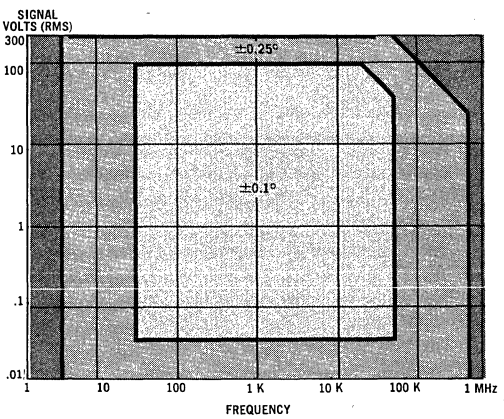
The variety of plug-ins available provides unlimited flexibility for the Series 305 Phasemeters in meeting many phase measurement problems. In addition to an expanding line of standard plug-ins, custom units can be designed for special needs.

305-PA-3001 AUTO RANGING PLUG-IN

This plug-in features high accuracy over a broad range of input levels and frequencies. Autoranging of gain in each channel assures high accuracy (±0.1°) over a dynamic range of 60 dB (50 mV to 50 V rms) for independent levels of inputs, with a useful range of 90 dB (10 mV to 300 V rms). This plug-in covers the range from 2 Hz to 700 kHz, with its highest accuracy of 0.1° in the 50 Hz to 50 kHz range. The curves shown illustrate typical accuracies as a function of level and frequency. The 305-PA-3001 also features compatibility with Textronix probes and includes front panel lamps to indicate when either input signal is below 50 mV or above 50 V rms.



TYPICAL ERROR CONTOURS FOR 305 w/305-PA-3001 FOR EQUAL SIGNAL INPUTS



TYPICAL ERROR CONTOURS FOR 305 w/305-PA-3001 FOR UNEQUAL INPUTS — REF. 0.3 VOLTS RMS

While the above accuracies apply to sine wave inputs, this instrument can also be used for square wave and amplitude modulated signals.

305-PA-3002 SINGLE RANGE PLUG-IN

The 305-PA-3002 is similar to the model 305-PA-3001 except that it does not include autoranging or limit indicator lamps. For sine wave inputs the standard unit is designed for ±0.1° accuracy over independent signal levels of 50 mV to 500 mV rms, with a slight reduction in accuracy from 10 mV to 3 V rms. Other level ranges can be supplied on special order, and Tektronix probes can be used for high input levels. This plug-in is useful for sine wave, square wave and amplitude modulated signals.

305-PA-3005 HIGH FREQUENCY PLUG-IN

This high frequency plug-in is designed for high accuracy to 11 MHz. Using a self tracking oscillator, the input signals are converted to 40 kHz for precision measurement by the mainframe. Input attenuators (50 ohms) are provided with 10 dB steps, to cover a range of 1 mV to 3 V rms in either channel. Front panel lamps indicate when input levels are out of range or when level controls are improperly set. The self tracking oscillator can be controlled by channel A signal or by a third independent signal.

305-PA-3007 PROGRAMMABLE AND AUTO RANGING PLUG-IN

This programmable plug-in features all of the characteristics of the model 305-PA-3001. In addition it includes increased input gain to achieve operation down to 1 mV rms. The unit can be operated either in an automatic or programmable mode. Without rear connections, the plug-in operates automatically as a 305-PA-3001; however, by utilizing rear connectors, the internal autoranging can be over-ridden and additional internal gain can also be inserted. Programming is available by DTL and TTL logic.

305-PA-3008 SINGLE FREQUENCY PLUG-IN

The 305-PA-3008 is a special purpose plug-in designed for precision calibration of 50 Hz, 60 Hz and 400 Hz power line equipment such as wattmeters, phase detectors and watt hour meters. This instrument can measure phase difference between two voltages, two currents or between a voltage and a current. The unit covers a voltage range of 25 V to 250 V rms and a current range of 0.1 to 5 A rms. The basic plug-in covers the frequency range of 50 Hz to 500 Hz. Plug-in filters, available for 50 Hz, 60 Hz and 400 Hz, assure reduction of second harmonic by at least 40 dB and higher harmonics by at least 50 dB. A front panel zero control provides adjustment for high accuracy (±0.1°) at any single frequency.

305-PA-3009 WIDE BAND NETWORK ANALYZER PLUG-IN (GAIN/PHASE/AMPLITUDE)

This plug-in measures the voltage amplitude of each signal input, the phase difference between inputs, and the amplitude ratio of inputs. Featuring auto-ranging of gain in both channels, it requires no manual setting of gains for any measurement. Simultaneous DC outputs on mainframe proportional to all functions. A front panel switch selects the measuring mode for digital panel readout — channel A voltage, channel B voltage, phase difference, or amplitude ratio. Lamps on the front panel of the plug-in indicate the proper decade multiplier.

305-PA-3010 SPECIAL PURPOSE PLUG-IN

This plug-in is typical of special purpose plug-ins which can be supplied to meet unique problems. Having high input impedance, it is equipped with closely matched low pass filters to pass 125 Hz signals while rejecting 400 Hz signals, solving problems in many types of servo control systems. Similar units can be readily designed for other special voltage and frequency applications.

VOLTAGE ISOLATION TRANSFORMERS

Dranetz TR 3100 series transformers are available for input voltage isolation with minimum phase error. Available for use with balanced or signal ended sources, these units are equipped with internal preamplifiers to produce outputs in the 30 mV to 3 V rms range (for use with 305 Series Phasemeters) for input levels from 50 mV to 500 V rms. These transformer units are packaged for direct plug-in into the input BNC's of the phasemeter, and draw B+ power from the front panel accessory connector of the phasemeter plug-in. Size: 2″ D x 2″ long. Input: banana jack. Output: BNC.

SERIES 311

PHASE SENSITIVE VOLTMETER

FEATURES

- 400 Hz Phase Sensitive Measurements
- Total, Fundamental, In-Phase and Quadrature Voltages and Phase Angle
- Isolated Reference, External or Line
- Protected Against 1500 V Input Transients
- Low Cost

The Series 311 Portable Phase Sensitive Voltmeters are high quality, low cost instruments designed for measuring a vector voltage and its components with high resolution. These instruments are capable of measuring total voltage over a frequency range of 20 Hz to 20 kHz. At 400 Hz phase sensitive detection is used to measure phase angle as well as fundamental, in-phase and quadrature components of voltage. Band pass filtering is incorporated to reject noise and harmonics to assure high null resolution. Accurate nulling of the minor component is achieved even in the presence of 10 times full scale overload of the major component.

Internal or external reference voltage can be selected by the operator. The internal source is always isolated. The external inputs may be connected directly or through a self-contained isolation transformer. Auto-ranging circuits eliminate reference level adjustments over the entire range of 1 to 150 V rms, and a zero adjust potentiometer on the front panel provides simple phase calibration correction for the isolation transformer. High input impedance eliminates electrical loading errors.

This instrument is ideally suited for synchro and resolver testing, servo systems evaluation, phase sensitive nulling, phase angle measurements, and as a general purpose broad band voltmeter.

The design of these units incorporates solid state and microcircuits throughout, assuring low power consumption and long life of operation. The unit is packaged in a portable, rugged and weatherproof aluminum case for field use. Adapters can also be provided for rack mounting.

POWER SYSTEM PHASEMETER / FOR ACCURATE & RAPID MEASUREMENT OF PHASE IN ELECTRIC POWER SYSTEMS

FEATURES

- Universal Current-Voltage Inputs
- Portable
- Immune to Harmonics
- Independent of Frequency Changes
- Digital Readout — "No Hands" Simplicity
- Accuracy ±0.5°, Resolution ±0.1°
- Independent of Input Levels
- Low Cost

APPLICATIONS

- Testing and Adjustment of Protective Relays
- Measuring Load Current Phase Angles
- Testing Polyphase Balance
- Determining Power Flow in Interconnected Systems
- Minimizing Circulating Reactive Currents
- Synchronizing Multiple Sources

Accurate, precise and rapid phase measurement is an essential technique in the setup, operation, and maintenance of modern power systems, subsystems, and the control and protection circuits used in them. The value of a phase meter in such applications is directly proportional to the speed, convenience, and validity with which it indicates the phase angles it measures. With the introduction of the Dranetz Model 314, virtually all of the limitations and error sources of electromechanical meters have been removed, and the overall accuracy of this class of phase measurements has been increased by more than a full order of magnitude. The basic accuracy of ±0.5° specified for the Model 314 is actually **maintained, without degradation,** over the wide ranges of frequency variation, voltage/current level, and harmonic content for which the instrument is rated. Furthermore, the direct-reading **digital** presentation of phase, to four-place resolution (0.1° increments) requires no interpretation or interpolation, and is not subject to reading errors or parallax. **The phase angle you see is the phase angle that exists — to within ±0.5°,** without correction or uncertainty.

Soul Source

AND, in many instances*, "sole source", as well. Particularly, when **all** of the fine-print parameters must be met. Our customers will attest to the fact that we've been soul source because we understand their problems, requirements and specifications. We're completely responsive to their needs. When they've a problem in systems implementation, time, temperature, frequency, crystals, filters, oscillators, controlling or counting, people usually call us first. After all, solving problems in these areas . . . or telling people that we can't . . . is how we've built our reputation. Both customers and non-customers will tell you it's true. And, it's good to be true.
Matter of fact, we're seriously thinking of adopting a customer's suggestion for the slogan of our company: "People doing things that matter . . . imaginatively!"

For example, in miniature digital components for industrial control systems, we feature: rugged, all aluminum cases, circular, polarized lenses, solid state displays, BCD outputs, remote control options, power fail indications, and instruments to implement your systems that lend themselves to the clean, uniform look that you need to make that system of "whole cloth."

Industrial digital counters for starters . . . both uni- and bi-directional . . . in rates as high as 20 MHz, and prices as low as $216.00. Digital clocks that run the gamut from to from either 60Hz time bases or Xtal time bases. And, comparators , of all kinds . . . uni-directional, count-throughs, bi-directional, tracking . . . with every desirable kind

of option. 60Hz and Xtal time-base digital stop watches , that count up, count down with unbelievable accuracies. Frequency meter/tachometers too numerous to mention in detail. Digital thermometers , that you'll have to use to appreciate. And, of course, Digital Panel Meters , with absolutely no peers. And ; and, whatever else you need from your soul/sole source.

For complete specifications, options, etc., do what others have always done . . . contact us first . . . to last. We're here to help, not just to sell. Even if that means recommending another source. We think that's the reason we can truthfully say that we're the only real soul source.

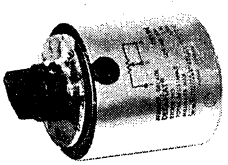
e|s|i® precision decades and components

Electro Scientific Industries makes available panel mount decades, dividers and individual resistors that are the nucleus components for all our precision measurement and calibration equipment.

The patented Dekadial® stacked decades save panel space at 0.02% accuracy in the decades, 0.002% (20 ppm) for the dividers. Solid silver-alloy switches are used throughout, plus silicone-treated ceramic switch wafers with 10^{10} ohms insulation resistance. The wire-wound resistors are produced by a proprietary winding ageing process for highest precision and stability.

Resistive Decades



DS 12 Individual Decade Resistor

Nine different total resistances available for DC and audio frequency applications. Can be used as a divider by cutting jumper wire.

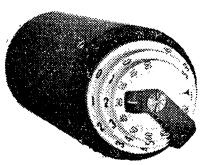
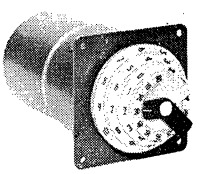
Dekapot® Dividers



DP 1311 Decade Potentiometer

Kelvin-Varley linearity is guaranteed 20 ppm stable/yr. Three decades plus 100-division potentiometer gives resolution of 0.0003%. Three different values available.

Dekatrans®



DT 1145 Miniature Decade Ratio Transformer

Dekatrans are inductive voltage dividers for use at audio frequencies. High input impedance, low output, and low phase shift make it ideal for testing voltage and current division, turns-ratio measurement, divider calibration and impedance comparison.

Precision Wirewound Resistors

A special ageing process ensures stability to 0.005% standard, or 0.001% on the best available. Standard initial accuracy is 0.01%, but 0.0015% is available. Changes in environment have little effect and ac residuals are low. Come in open frames (RF), encased in diallyl phthalate (RC) or hermetically sealed cases (RH).

Special DEKA Units

Standard model DEKATRANS, DEKAPOTS®, and DEKASTATS® are available in modified form. "O" rings and quad rings are installed to seal against moisture, and special epoxy glass rings are used to protect the resistor switch assemblies against shock and vibration hazards (designed to meet MIL-T-21200, classes 2 and 3). resistor switch assemblies against shock and vibration For details, consult factory.

1. Tension member assures constant band tension while absorbing shock and vibration to prevent band breakage.

2. Strong taut-band eliminates friction and will withstand heavy shock and vibration without damage.

3. Pole piece design assures uniform flux density from 0 to 250° deflection for better tracking.

4. Unique balance weight design assures proper balance even after heavy shock and vibration. No weight wires to shift as on other meters.

5. Large berrium ferrite magnet provides 40% more flux density than other "core magnet" designs for better torque.

6. Movement is suppressed slightly against stop peg to eliminate zero adjust. Pointer is always at zero in any position.

Field proven in the most rugged automotive and snowmobile OEM applications, this high performance 250° meter movement is featured in all the case styles shown at left. Wrtie or call for data sheets and prices today!

INCREMENTAL INDUCTANCE BRIDGES

Direct in-line readings of inductance and conductance of iron core component at audio frequencies with or without superimposed direct current. The bridge uses the Owens circuit with provisions for measuring the series or parallel inductance and conductance of the unknown inductor; five precision resistance and capacitance decades are provided to indicate these values. "Q" or storage factor can be measured as the product of the inductive reactance and the conductance.

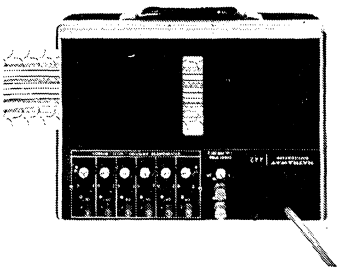
OSCILLOGRAPHS & PRINTERS

442 Oscillograph



The world's most versatile 2000 Hz 6 Channel Oscillograph is now the least expensive! Only a direct-write oscillograph can offer 6 channels of 2000 Hz performance in such a small package (9″ x 5″ x 13″). It uses no ribbons, chemicals or hot stylii. This second-generation, high-performance unit retains the proven ruggedness of our Model 444, yet sells for half the price.

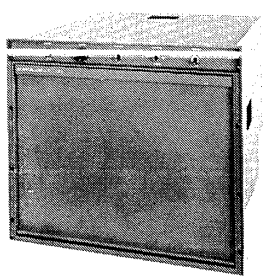
The 442 is portable; uses 3⅝″ x 150′ paper; operates from one of the following power sources:

12 VDC	220 VAC
28 VDC	115 VAC, 400 Hz
115 VAC, 50-60 Hz	

The 442 is completely self contained.

Accessories and options include signal conditioning, full width timing lines, grid lines, and any of the standard Model 210 Galvanometers may be used.

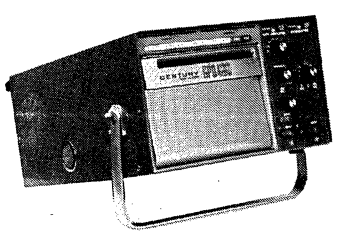
440 Oscillograph



The new 440 Oscillograph from Hathaway Industries, Inc. utilizes 12″, 10″ or 8″ wide paper by simple field adjustment. It provides up to 64 channel capacity with all the standard options of grid lines, timing, trace identification, and remote operation.

This instrument is highly versatile and sells for ¾ the price of competitive units and may be provided with an internal paper take-up option. It will accommodate 475′ extra thin base paper with chart speeds of .2 to 160 inches per second optional.

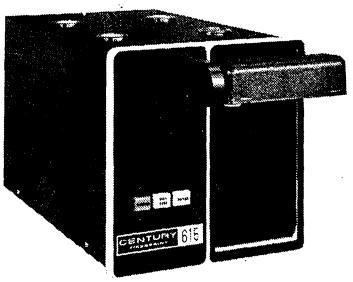
460 GPO Oscillograph



Now you can record high-frequency phenomena beyond the capability of pen and ink or hot stylus recorders. The Hathaway GPO is a light beam recording oscillograph at an unprecedented low price any laboratory can afford. Even more important, the GPO accepts calibrated signal conditioners that permit direct reading of values from the chart with a minimum of set up and interpretation.

The Hathaway Model 460 GPO is a complete high-performance oscillograph that incorporates many features of the most expensive models — yet is easy to carry, easy to use and easy to pay for. It opens a new era in data recording.

Videoprint 615 Ultra High Speed Printer

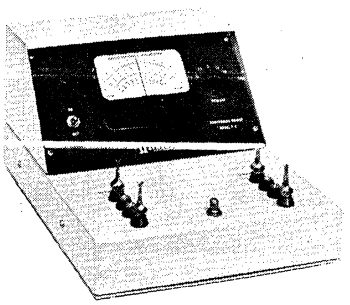


The Videoprint 615 is the third generation, non-impact Ultra High Speed Printer offered by Hathaway and incorporates the latest advancements in the art of electronic printers.

Completely silent, the Videoprint 615 prints 6000 lines per minute by means of a cathode ray tube and fiber optics. It is completely solid state with integrated circuits. The only moving parts are for the paper drive.

The Videoprint 615 has 32 columns at 6000 lines per minute; computer compatible with simple interface; synchronous or asynchronous operation. It is available in two basic character sets, 15 character numeric or 64 character alphanumeric and has self-test mode for system check out.

E-2 Comparison Bridge

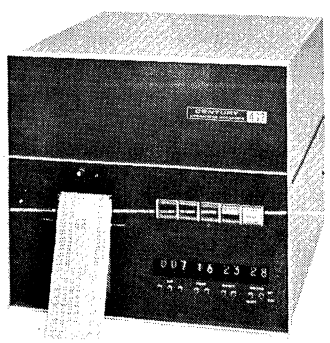


A versatile and fast component tester from Hathaway Industries for incoming inspection, laboratory, or assembly line, offers a high level of accuracy at low cost. It is used for measuring, matching and rejecting such components as resistors, capacitors, and inductors.

Low in cost because of highly simplified circuitry, the E-2 offers increased accuracy, reduced component selection time, low operator fatigue, and elimination of errors, with even an unskilled operator averaging about 0.1 percent accuracy.

The E-2 is easily calibrated and operated and has a sensitivity of one part in 10,000. Test limits are: Resistance, 1 ohm to 5 megohms; capacitance, 500 mmf to 2,000 mfd; and inductance, 3 millihenrys to 10,000 henrys. These ranges cover most electronic circuit components.

433/432 Operations Recorder



The Hathaway 433/432 Operations Recorder is a complete recorder with or without sequential memory. It can be expanded from 4 to 64 points by the addition of plug-in cards and to a full-blown sequential events recorder with millisecond resolution by the addition of plug-in printed circuit cards. It is a self contained recorder for complete log of operations of change of state data.

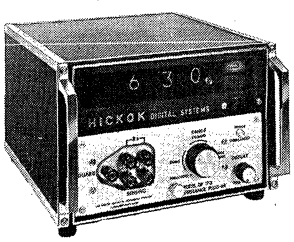
DIGITAL RESISTANCE METER



DP170 Resistance Bridge Plug-in in 3202 Main Frame

- ***1 milliohm to 1 gigaohm Range***
- ***3½-digit Resistance***

0.1% accuracy results from a patented automatic Wheatstone Bridge circuit.

For low resistance measurements, the 4-terminal input eliminates inaccuracies caused by lead and contact resistances. Maximum power dissipation for any range varies from 6 nanowatts to 2.5 milliwatts.

For high resistance measurements, the guarded input minimizes leakage paths which cause measurement errors.

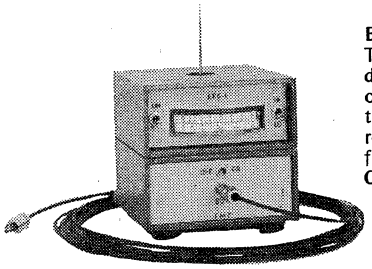
EMI meters/antennas/measuring systems

Instruments for Industry's new EFS-1 E-field sensor is widely used for RFI susceptibility testing, measuring field strength and for monitoring electromagnetic environments in hazardous areas. Reads directly in volts/meter and operates from two standard 9-volt batteries. When the application requires a low cost test instrument for measuring strong electric fields from 10kHz to 220MHz with no tuning or bandswitching or frequency related adjustments . . . use the EFS-1.



EFS-1 with LMT attached
The IFI Light Modulator-Transmitter attaches directly to the EFS-1 to convert the voltage output to an optical signal which is coupled through non-conducting fiber links for remote reading and control . . . without disturbing the field being measured.

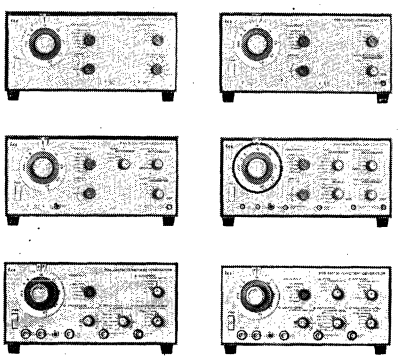
INTERSTATE'S RESOURCEFUL SIGNAL SOURCES

SERIES 30
FUNCTION GENERATORS
0.03Hz to 3MHz/ 20V p-p



Functional controls and operational accuracy combine to make any generator in the SERIES 30 line an excellent choice for your lab program. **F31 function generator is our answer to oscillator applications.** Like all SERIES 30 models, F31 outmaneuvers oscillators by producing square, triangle, and dc waveforms, as well as sinewaves, with sync output and continuously variable offset. The basic physical package includes plug-in IC's, calibrated fine and coarse tuning, and a 2-step 40 db output attenuator. (F31) $295

F32 adds 1000:1 VCG and replaces the F31 attenuator with a 5-step, 60 db version. The F32's unique output limit indicator (signal light) anticipates waveform clipping and tells the operator that offset and level dials are incorrectly set. (F32) $345.

F33 offers external sync input as well as external or manual pushbutton trigger and gate modes, while duplicating F32 capabilities. F33 also features the pulse waveform, and is one of the most inexpensive pulse-producing function generators available today. (F33) $395.

F34 gives you just about every test signal for basic laboratory applications. All F33 features are included, plus tone burst, continuous and triggered sweep, an easy-to-use direct reading sweep limit, and an analog voltage output in direct proportion to operating frequency. (F34) $495

F35 adds amplitude modulation with an internal 400 Hz oscillator to F32 function generator performance. A mode switch allows the operator to switch out the modulator when not needed, or select one of five modulation modes. Special AM techniques include suppressed carrier AM, and frequency doubling, which extends sinewave frequency to 6MHz. (F35) $595.

F36 is an AM/FM extension of F33. This versatile unit performs all the modulation applications offered by F35, and can gate or trigger, and produce variable width pulse in one economic package. (F36) $645.

SERIES 50A
FUNCTION GENERATORS
.0001Hz to 11MHz/ 30V p-p

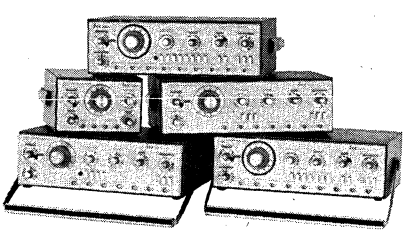
Interstate Electronics' "new generation" of exceptional signal-source instruments provide extended capability for almost every application need, immediate and long range. Waveforms include sine, square, triangle, 15/85% duty cycle ± pulses and ramps, plus variable width pulses. **The compact F51A doubles as a waveform generator and pulser,** sharing external pulse width modulation, 1000:1 VCG, sync input/output, and fixed and variable offset with all SERIES 50A models. (F51A) $680

F52A can be triggered and gated manually or externally with waveform start-stop over 180°. Along with all F51A capabilities, this unit features waveform inversion, simultaneous sine, square, and triangle monitor outputs, plus a wider-range, 70 db attenuator. (F52A) $910

The phase lock generator of SERIES 50A is F53A, offering coherent frequency multiplication or division. This unit also provides waveform inversion, monitor outputs, trigger, gate, and the 70 db attenuator. (F53A) $1025

F54A is the "sweep specialist," adding continuous, triggered, or frequency-shift sweep, and tone bursts to F52A performance. F54A sports a calibrated sweep width control on the frequency dial. (F54A) $1245

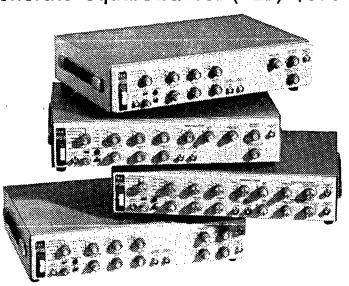
F55A is an outstanding laboratory resource. This instrument wraps up the special capabilities of F52A, F53A, and F54A, and is the industry's only function generator to offer the versatile combination of sweep and phase lock. (F55A) $1375



SERIES 20
PULSE GENERATORS
NEW!

1Hz to 50MHz/10V p-p

SERIES 20 pulse generators debut with a wide choice of capabilities including 100:1 continuously adjustable range controls plus a 10:1 vernier for pulse rep-rate, and a unique "constant duty cycle" (CDC mode) which establishes a constant timing ratio between pulse width and period even when rep-rate is varied. **P22 provides a single output pulse with fixed 3.5 nanosecond rise times,** full range offset, and trigger, gate, double pulse, triggered double pulse, pulse amplifier, and CDC modes. The "duty cycle" setting can also be used to generate squarewaves. (P22) $575



Two output channels with 3.5 nanosecond rise/fall are available on P23, which offers simultaneous positive and negative outputs and their complements, with a complete selection of operating modes. Simplified design conveniences included on all models are a master mode switch, "trigger" light, and single input BNC for all external drives. (P23) $625

With P24, pulse rise/fall can be varied over a 100:1 range. Rise and fall times for P24's single output pulse are adjustable from 5 nanoseconds to 500 milliseconds, while all other controls are similar to P22. (P24) $875

P25 meets broad performance requirements with independently variable rise/fall controls for each of two output channels. Featuring rise times from 5 nanoseconds, P25 combines the versatility of adjustable rise/fall with the comprehensive output capabilities of P23's dual channel operation. (P25) $1095

SERIES DM1000 MULTIMETERS

PROGRAMMABLE AC/DC MULTIMETERS AND PRODUCTION CALIBRATORS
DM-1000 SERIES DIGITAL MULTIMETERS TO 1 PPM ACCURACY/RESOLUTION/STABILITY

JULIE RESEARCH, for 15 years the pioneer in the manufacture of Precision Standards, now leads the way in providing Multimodel automatic precision calibrators. The new approach to production measurements with three sigma certainty reduces test equipment costs and testing time. The DM-1000 Multimeter doubles as a Ratiometer and Voltage Source in addition to measuring Voltage, Resistance and Current to 1 ppm. Just a few of this amazing instrument's uses are:

- **CALIBRATING DVM's AND DMM's**—2½ digits to 5½ digits, with full confidence.
- **CALIBRATING A/D AND D/A CONVERTERS**—8-bit to 20-bit binary resolution.
- **CALIBRATING ANALOG TRANSDUCERS**—to unprecedented orders of precision.
- **MEASURING ZENER DIODES AND STANDARD CELLS**—1% to 0.0001%, automatically.
- **MEASURING RESISTORS AND NETWORKS**—both absolute resistances and ratios.
- **CALIBRATING POTENTIOMETERS AND ATTENUATORS**—both linear and nonlinear.
- **MEASURING POWER-SUPPLY CHARACTERISTICS**—absolute output, regulation, tracking, stability.

JULIE AUTOMATED/PROGRAMMABLE SYSTEMS

COMPUTER CALCULATOR CONTROLLED PRECISION TEST SYSTEM — LOCOST 106*

DESCRIPTION AND APPLICATIONS

From the leading manufacturer of precision standards and measuring instrumentation, Julie Research, a new computer controlled test system is available at a low cost to fit into the budgets of even small calibration and testing laboratories.

LOCOST* features a combination of computer, data terminal, high speed thermal printer, programming cassette memory and a programming calculator which can be operated by lab technicians with little or no computer and programming experience. It uses BASIC language, has an alphanumeric keyboard and an interactive 32-character display, as well as a built-in 15K byte main-line memory. Cassette memory is 32,000 words. Capability of the calculator is equivalent to a 10K or 12K mini-computer.

A unique, labor saving feature of LOCOST* is its unique programmed software which makes it possible to generate, store, and carry-out test programs for new instruments efficiently. Simple questions concerning the specifications of the instrument under test are asked by the calculator and the operator answers these questions by typing specifications such as full-scale accuracy, etc. When completed, these specifications are then stored on cassette memory for future reference and use by the system's preprogrammed meter test routine. Programming costs are 80 to 90% lower than for conventional computer controlled systems.

A complete array of programmable DC and AC test instrumentation is available to satisfy even the most demanding testing and calibration applications. Sources and measuring instruments that are available include:

* LABOR OPTIMIZED COMPUTER OPERATED SYSTEM TEST

DESCRIPTION AND APPLICATIONS

LOCOST-1106 features a system comprised of a PDP-11/15 Digital Computer, High Speed Photo-Electric Perforated Tape Reader, Magnetic Tape Cassette Unit, Cathode Ray Tube Terminal with Keyboard and a High Speed Thermal Printer. This fully integrated complement of control equipment permits high speed and reliable operation of the Julie LOCOST-1106 system.

The LOCOST-1106 system performs high accuracy (1 part per million absolute) measurements quickly and easily. The minicomputer, coupled with the very powerful interactive software operating system allows test programs to be written by users with minimum training. Test results are presented on both a GO/NO-GO basis and on a parametric basis with a selection of data logging formats. Special applications and measurements can be accommodated wtih a minimum of hardware and software modifications, thus giving the system tremendous expansion capabilities, both before and after delivery. LOCOST-1106 can be used with compatible test instruments to automatically perform functions which are usually reserved for high-precision manual instrumentation. (See LOCOST-106 section above for a list of compatible Julie and Optimation instrumentation.) Please contact the JRL sales department for detailed information.

AUTOMATIC AND PROGRAMMABLE DC VOLTAGE, CURRENT AND RESISTANCE MEASUREMENTS TO 20 PPM ACCURACY, 1 PPM RESOLUTION

JULIE RATIOMETRIC® SYSTEMS

PRECISION RESISTANCE MEASURING SYSTEMS

Through the use of the RESISTANCE PLUG-INS, the multivider system is made into various precision resistance measuring systems.

When the PRB-205C bridge and range extenders PRB-205L and PRB-205H are used with the basic multivider detector and divider, the system is identified as the PRB-205S, and is capable of measuring resistance values from 0 to 10^{12} ohms. Zero offset circuitry establishes the true zero point and eliminates all test lead and fixture effects. Direct reading deviation dials permit measurement of deviation from 0 to ±1200 PPM in 0.1 PPM steps, with an accuracy of 0.1% of observed deviation or 0.2 PPM, whichever is larger. Resistance measurement accuracies obtained are tabulated below. All required resistance standards with NBS traceability are included. Model PRB-205C Plug-in includes Model MRS-106 Reference Resistorset, and the PRB-205L includes Model MRS-105 Reference Resistor set. See specifications in the resistance reference section.

When the Model DRRS-108 plug-in is used, the Multivider system is made into a Direct Reading Ratio Set, capable of measuring the Thomas pattern 1 ohm resistor with an accuracy and precision of .1 PPM. It also permits making 1:1, 1:9 and 1:10 comparisons of 2 and 4 terminal standard resistors.

JULIE PRECISION MEASURING SYSTEMS

In Julie approach, use is made of very accurate resistance and voltage references. A voltage divider is used with associated circuitry, switches and a null detector, to interpolate and extrapolate the values of these references. Total measurement errors are reduced, very simply, to those produced by the voltage divider (usually 1 ppm f.s. at worst), switching and hook-up (usually 1 or 2 ppm) and reference voltage or resistance (1 ppm to typically 10 ppm for resistance).

The key to the Ratiometric™ approach is the stable Kelvin-Varley voltage divider. (See the table that follows.) Although the Kelvin-Varley divider was invented over 100 years ago, it was not used in high precision applications because of accuracy limitations. With the radical improvement in the accuracy of the Kelvin-Varley divider by Loebe Julie, founder of Julie Research Laboratories, Inc., the previously unrealized advantages of this divider were harnessed. Background information is available for the asking from the Julie Research home office in New York City.

These pages list only a basic sampling of Julie products. We welcome your request for detailed information.

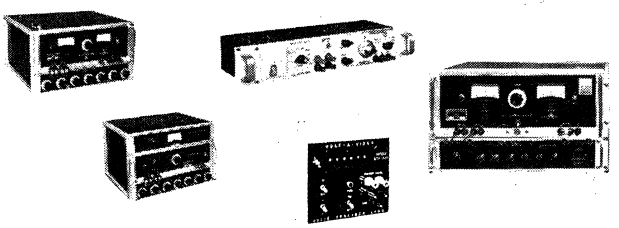
JULIE PRECISION MEASURING SYSTEMS

DC VOLTAGE AND CURRENT SOURCES

Julie precision voltage and current sources are the most accurate and most stable available. Many standard models are available as tabulated below. The Julie Engineering team is always pleased to design special configurations when special applications demand custom units. In general, highest quality precision sources are comprised of a stable voltage reference (such as ZVR-512), a 100K Kelvin-Varley divider (such as VDR-307H) for output control, and an ultra stable, low noise operational amplifier (such as OA-600 Series). All three basic modules are available from Julie and can be assembled as required.



Model	Outputs	Accuracy	Stability	Price
DVS-106	0 to ±12, 120, 1200 v at 35 ma, 7 digits	2 ppm	2 ppm/day	**$4100.**
DCS-105	0 to ±1.2, 12, 120 ma; 1.2, 12 Amps	10 ppm	3 ppm/day	**$4200.**

The GTX-300 Series is a high quality, compact, portable voltage source. Output settings on this 1 PPM resolution instrument range from 1 microvolt to 10 volts D.C. and can be made simply by dialing the desired value. Accuracies of from 0.001% to 0.005% can be ordered. Loads requiring up to 25 mA can be tolerated without accuracy deterioration. An output stability of ±3 PPM/24 hours is standard on all units.

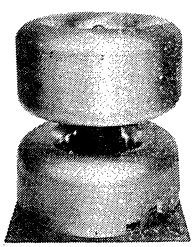
AC/DC HIGH VOLTAGE DIVIDERS



MODEL HV-100 SERIES AC/DC HIGH VOLTAGE DIVIDER

The HVA Series Dividers are designed to be used primarily as calibration standards of DC and 60 Hz voltages up to 300 KV. The HVA Series can be sent to the National Bureau of Standards in Washington, DC for testing. To date, all tested units have been found to be safely within ±0.05% on 60 Hz and ±0.01% on DC. Yearly stability is specified as better than 0.005.% Input resistance is 1000 ohms per volt and output taps can be provided for connection to readout instruments such as DVM's, Differential Voltmeters and other high impedance DC or AC/DC instrumentation.

Now... you can check logic levels in virtually any (DTL, TTL) IC system quickly and accurately. The small shirt pocket size Logic Probes indicate "Highs", "Lows", and "Dead Band" readings precisely through color-coded readouts in the probe tip. Detects unterminated pins also. All probes are rugged, solid-state instruments in attractive chrome-finished steel cases. Power is derived from the equipment being tested. All probes are overvoltage tip protected to intermittent ±100VDC, power lead reversal protected. Use logic probes for field service testing, inspection, monitoring, production line checkout, or Engineering Lab circuit design.

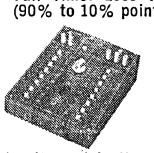
KURZ-KASCH NEW PORTABLE DIGITAL IC TESTER

Completely Portable

The Model IC-590 is a portable battery powered Digital IC tester for static and dynamic testing of all 14 and 16 pin dual in-line IC modules of the DTL and TTL, 5 and 15 volt families. Flat pack and TO-5 Modules may be tested by using appropriate adapters.

Set Up From Factory Specs

The Model IC-590 is designed to be used in conjunction with published IC specification sheets for proper programming of the IC under test. Four-position, high quality, slide switches for each of sixteen pins allow the selection of Vcc, Gnd, Clock or Nc (no connection) for each pin. A single selector switch for 5 to 15 volt logic changes all input and output monitoring circuits. A three-position switch selects one of two internal clock frequencies or an external mode. All input and output conditions are displayed by two lamp indicators marked level "0" and "1". The same patented* circuit used in Kurz-Kasch logic probes, instantly displays the logic condition on any pin of the IC selected by a seventeen position rotary switch. The "0" and "1" indicators uniquely remain off on any non-terminated pins.



SPECIFICATIONS

Input: Internal square wave of 2 Hz or 15 KHz or external input applied to 5-way binding post.

Level Indicator Thresholds:

	5 Volts	15 Volts
Logic "0" =	0 to 1.0VDC	0 to 1.5VDC
Logic "1" =	2.4VDC to Vcc	10.0VDC to Vcc

Indicators remain off in case of open pins or improper logic levels

Test Voltages:

5 or 15VDC selected by Vcc switch.

5 Volt = 5.0VDC ±.3VDC

15 Volt = 14.5VDC ±.3VDC

Accommodates all 14 and 16 pin devices

Battery Requirements:

6 "C" size cells are used if testing 5 volt logic only. 12 "C" size dry cells if both 5 and 15 volt logic are to be tested. Set test select switch to "BAT" position. Level "1" light illuminates if batteries are good. IC-590 Price $169.95

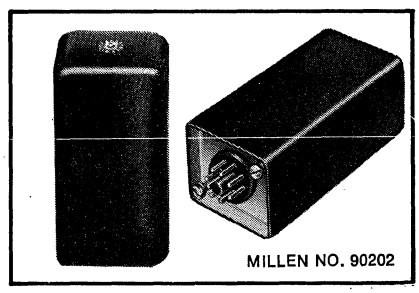
MILLEN NO. 90652

Solid-State Dipper

The Millen No. 90652 Solid-State Dipper introduces a new dip oscillator with performance comparable to that of the best vacuum-tube grid dip meters previously available, but with the universal advantage of battery power which eliminates the power cord and provides a portability which is not restricted by the requirement for a-c power. The operating features of the No. 90652 Solid-State Dipper include (1) a sensitive oscillator-dipper for checking resonant frequencies of non-energized resonant circuits, and (2) an absorption type wavemeter with the oscillator circuit arranged to act as a Q-Multiplier Amplifier, providing both a sharp tuning response and great sensitivity. The frequency range of 1.6 to 300 MHz is covered by 7 plug-in coils, with some overlap between ranges. The lowest frequency coil (1.6 to 3.3 MHz) is wound on a powdered-iron core to increase Q and improve coupling to circuits being checked. The circuit of the No. 90652 Solid-State Dipper is reliable and straightforward, making use of standard semi-conductor elements. The oscillator is a 3N128 MOS-FET in a Colpitts circuit. The r-f voltage across the tank circuit is rectified by 2 1N3604 diodes in a full wave connection to develop a d-c voltage proportional to the r-f present in the coil.



MILLEN NO. 90202

Module Power Supplies

The Millen No. 90202 Plug-in High Voltage Module for use with the Millen Module Oscilloscopes supplies both high voltage and heater power. Input: 105-125 volts, 60 Hz. Output: 750 volts d.c. at 3 ma. to 1140 volts d.c. at 1 ma. and 6.3 volts a.c. at 0.6 ampere, Physical Data: 1⅞" x 2⅛" x 4⅝". The Millan No. 90202-C is similar to No. 90202 except recommended for continuous duty and for 50 Hz. applications.

Compare the new Nicolet 1090 DIGITAL STORAGE OSCILLOSCOPE with any analog storage oscilloscope...

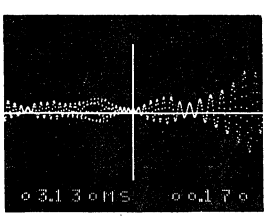
- It is a hundred times as accurate.
- It has vastly increased resolution.
- It is much easier to use, and
- it provides digital information to both you and your computer.

The new 1090 digital storage oscilloscope is operated in the same manner as an analog storage oscilloscope, except that to capture a particular signal, you just press a pushbutton. No screen erasure, no mode changing, just press a button. To again view each waveform (the "non-storage" mode) you just press another. No enhancement controls, no mode changing. It is so easy that we have provided remote control input terminals. Let your external apparatus do your selecting for you; since there is instantaneous response to external store and release commands, and since there is instantaneous choice of storing either the last signal to have started, or the next, you can do things you have never before been able to do.

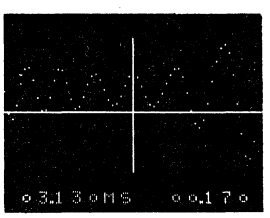
Store waveforms as long as you like, and examine them in great detail by use of the excellent waveform expansion facilities. The expansion controls are easy to use; they are necessary because the model 1090 stores as much information about a single signal as can be stored on the screens of 250 well adjusted analog storage oscilloscope screens. Use the instrument as a high precision waveform comparator; the expansion controls automatically expand and center equivalent time and voltage regions for both the standard and the new waveform. You can move either up or down to facilitate easier comparisons.

WAVEFORM EXPANSION

Moveable crosshairs are used to select any region of the stored waveform for closer inspection. This selected area can then be expanded in voltage and/or time dimensions, in steps of two, up to a factor of 64x.



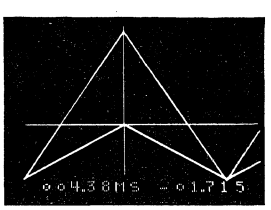
4x expansion on X axis, 1x on Y axis.



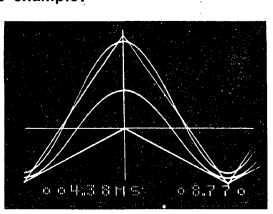
32x expansion on X axis, 8x on Y axis.

THE 1090 AS A COMPARATOR

The 1090 can compare up to four waveforms simultaneously in a variety of applications. Here is one example:



Standards. In one application you can store upper and lower limit waveforms in two memory quadrants . . .



Comparison. And then compare these standards with one or two measured waveforms to see if they fall within the prescribed time and/or voltage limits.

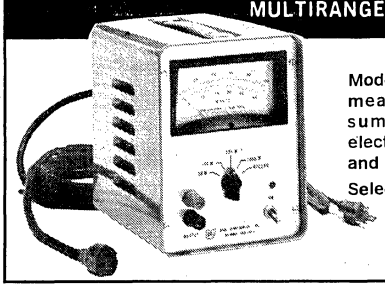
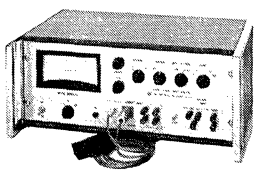
EQUIPMENT FOR CURRENT, POWER AND MAGNETIC FIELD MEASUREMENT

MULTIRANGE A.C. WATTMETER



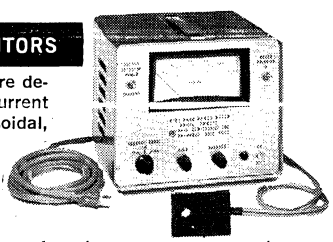
Model WM1000 wattmeter meaures real power consumed by small motors, electronic test equipment and other electrical loads. Selectable full scale ranges are 50, 100, 500 and 1000 watts with an accuracy of ±3%.

WIDEBAND WATTMETER



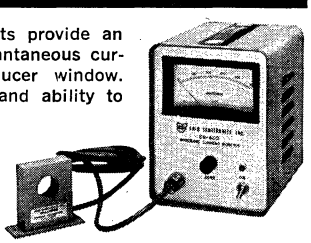
PM-4004 Wideband Pulse Power Monitors provide the unique ability to measure power in solid state switching circuits. The d.c. response and 30 nanosecond risetime insures accurate determination of instantaneous power waveform. Power input, power output, or power dissipated in solid-state devices may be readily determined. Built-in meters provide average or peak power reading. Instantaneous power, current, or voltage may be observed by connecting an oscilloscope to "monitor output" jack.

WIDEBAND POWER MONITORS



PM-6010 Series Power Monitors are designed to provide power or current measurements where d.c., sinusoidal, non-sinusoidal or pulse power is delivered to a load. Currents up to 1000 Amperes can be handled with negligible circuit interaction due to the use of circuit isolated transducers. Meter display of peak or average power is provided. 0 to 1 volt output proportional to instantaneous power or current is available for oscilloscope monitoring of detailed waveforms with risetimes less than 1 microsecond in the d.c. to Megahertz frequency range.

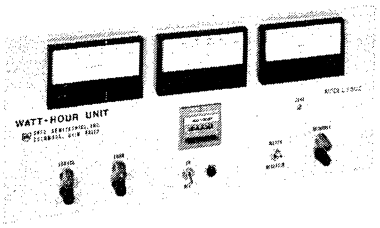
WIDEBAND d.c. to Megahertz CURRENT MEASURING EQUIPMENT



CM Series current measuring units provide an output signal proportional to instantaneous current flowing through the transducer window. The d.c. to Megahertz response and ability to faithfully reproduce 1 microsecond transients provide an ideal way to monitor critical circuits without electrical connection and with minimum interaction caused by measurement. The panel meter provides a display of direct current while the +1 to −1 volt output can be used for monitoring or control purposes with current flow in either direction.

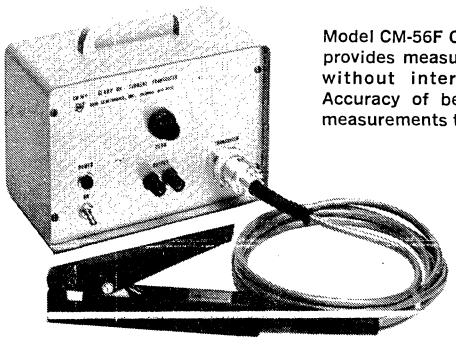
MODEL	PEAK CURRENT AMPERES	METER RANGE AMPERES	OUTPUT-VOLTS
CM-30	30	0 - 30	0 - 1
CM-100	100	0 - 100	0 - 1
CM-200	200	0 - 200	0 - 1
CM-600	600	0 - 500	0 - 1
CM-1000	1000	0 - 1000	0 - 1

WATT-HOUR AND AMP-HOUR METERS



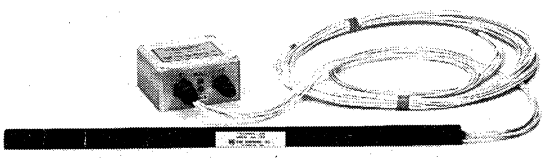
Registration of total energy consumption of motors, processes and equipment in a.c. or d.c. circuits is available on resettable counters. Other units provide a registration of charge flow, or Ampere-Hours, into or out of battery systems. Multiple measurement panels are available which provide display and electrical outputs related to instantaneous current, voltage and power in addition to energy registration.

CLAMP-ON CURRENT TRANSDUCER



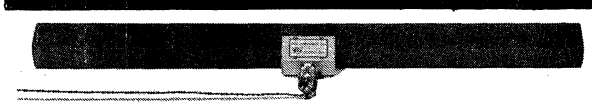
Model CM-56F Current Transducer provides measurement of current without interrupting circuit. Accuracy of better than 0.50%, measurements to 50 Amperes and d.c. to Kilohertz response are featured. An electrical output providing an analog 0.1 Volt/Ampere signal is available for use in control systems, computer interfacing or recording.

POSITION AND PROXIMITY MEASURING EQUIPMENT



MS-1100/MA-1100 Displacement and Proximity Monitors provide non-contacting measurement of position over a 20 inch range. Custom designed units can be fabricated for a variety of position, counting, and velocity determining applications.

BROADBAND MAGNETIC ANTENNAS



The MS-1000 Magnetic Antenna offers outstanding VLF and ELF sensitivity. Its unique frequency independent properties offer versatility for ELF, VLF and LF detection applications in communications, interference location and reduction, as well as other applications where detection of low level magnetic or electromagnetic fields is necessary. The unique broadband properties make the MS-1000 ideally suited for transient magnetic investigations such as those related to lightning and low frequency variations in the earth's magnetic field.

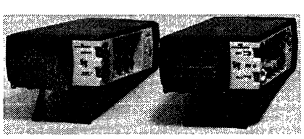
434 Storage Oscilloscope—All of the advantages of Bistable Split-Screen Storage, plus those of a conventional oscilloscope in a portable instrument with a large 8 x 10-cm CRT.

Bandwidth is DC to 25 MHz and deflection factors are 1 mV/div to 10 V/div. A wide range, direct-reading magnifier expands the horizontal display up to 50 times in six steps. 20 ns/div is the fastest magnified sweep. Storage writing rate is 100 cm/ms (400 cm/ms in enhanced mode) for the 434. Storage writing rate is 500 cm/ms (5000 cm/ms in enhanced mode) for the 434 Option 1.

434 Storage Oscilloscope **$2150**
434 Storage Oscilloscope Option 1 ..... **$2175**



212 and 211 Miniscopes—The dual-trace 212 and the single-trace 211 are valuable assets to the man who travels. They weigh just 3½ pounds and measure approximately 3 x 5¼ x 9 inches, easily fitting in a tool kit, briefcase or even a glove compartment. Although small and light weight, they have a bandwidth of 500 kHz and 1 mV/div vertical sensitivity. Horizontal sweep speeds are from 5 μs/div to 500 ms/div in the 212, and 5 μs/div to 200 ms/div in the 211. In both cases, the maximum sweep speed is expandable to 1 μs/div with the magnifier.

Rechargeable nickel cadmium batteries provide the measurement flexibility required for remote applications.

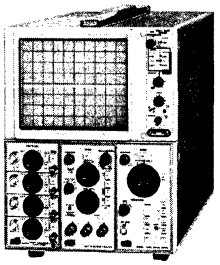
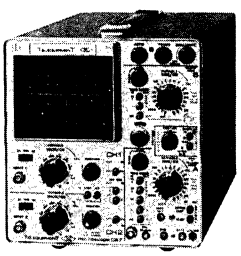
LOW-FREQUENCY OSCILLOSCOPE SYSTEM



5103N Oscilloscope System—Exclusive cost-saving features and flexibility are offered in this new modular system consisting of 11 vertical amplifiers (including a semiconductor curve tracer), 3 time bases and a 3-plug-in mainframe compatible with 5 interchangeable display modules. Bandwidth is DC-to-2 MHz, depending on the amplifier selected. Four X-Y or eight Y-T displays are available by combining plug-ins. Scale factors are read out on lighted knob skirts. Information is displayed on a large 6½-inch CRT.

5103N System prices begin at **$675**

TELEQUIPMENT ..... low cost oscilloscopes a subsidiary of Tektronix, Inc.



When price is of prime importance, TELEQUIPMENT warrants serious consideration. TELEQUIPMENT oscilloscopes combine low price with a number of features not usually found in other oscilloscopes in this price range. Bandwidths range from 50 MHz at 5 mV/div to 3 MHz at 100 mV/div. A dual-trace bistable storage oscilloscope is also available.

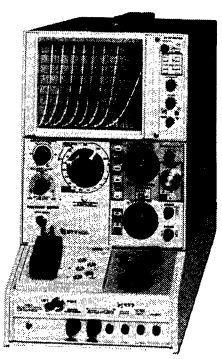
CURVE TRACER

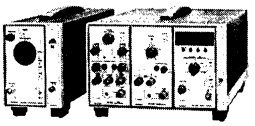


The 577 Curve Tracer is a solid-state system for measuring the parameters of semiconductor devices such as linear ICs, tunnel diodes, Zener diodes, signal diodes, rectifier diodes, NPN or PNP transistors, field effect transistors, and silicon controlled rectifiers. The 577 can be used with either the D1 storage or the D2 nonstorage display module.

Two test fixtures are presently available for the 577. The 178 Linear IC Test Fixture introduces the capability of displaying the characteristics of linear ICs. Among their characteristics are gain, common-mode rejection ratio, power supply rejection ratio, input current, supply current, and L/F noise. The 177 standard test fixture enables fast, reliable measurements of the characteristics of two-, three- and four-layer semiconductor devices.

577/D1 Storage Curve Tracer **$2000**
577/D2 Nonstorage Curve Tracer **$1550**
177 Standard Test Fixture **$300**
178 Linear IC Test Fixture **$900**

TM 500 TEST and MEASUREMENT SYSTEM



A compatible series of power supplies (single- or dual-tracking), digital counters, digital multimeter, ramp, signal, pulse and function generators comprise the initial offering in this low-cost line. Each module is designed for stand-alone capability in its cabinet/power unit. Extra benefits accrue when the modules are inserted in the larger 3-wide cabinet/power unit. For example, a counter, function generator and power supply can be used simultaneously, with less bench space and cost than three monolithic instruments.

Up to 6 modules can be mounted in a standard 10-inch rack, and occupy only 5¼ inches of rack height. Now you can combine many of your common bench-gear functions in one compact, simple, yet expandable system, and at a very favorable cost-performance ratio.

Triplett, manufacturer of the World's most complete line of V-O-M's, is ready, willing and able to design and manufacture special testers of virtually any size, style or type to meet your specifications.

Tester A (above) was designed to give auto mechanics a simple, rugged tester for "go/no go" tests that would otherwise be measured in electrical units unfamiliar to them.

Tester B is a modification of a standard Triplett tester incorporating only the specific ranges needed by the field service engineers for whom it was designed.

Tester C has special ranges and special input connectors and cables to permit a single-point connection for trouble-shooting and servicing all the circuits of a complex business machine.

Several other buyers of standard Triplett test equipment request their company name on the dial to personalize their testers.

If you think a custom tester may solve some problems for you, contact your Triplett representative. He'll put you in touch with the Tester Designers and Engineers at Triplett who'll help you analyze the problem and suggest the optimum cost/result solution. MODEL 4228-N DIGITAL PANEL METER

1 **2¾ Digits — Provides double the accuracy, (.25% of reading ±½ digit) and double the resolution at lower cost.**

2 **INSTANTANEOUS RESPONSE — 16 millisecond display rate with 60 times per second sampling rate.**

3 **FOOL PROOF NUMERAL DISPLAY — Blurs when out-of-range and with negative polarity.**

The Triplett Model 4228-N is a new, lower cost 2¾ digit instrument designed for the OEM market as well as for use in production and general testing, servicing and educational applications. It has indicating capabilities to 1995.

The Model 4228-N employs an analog to digital converter of the single ramp type, with the ramp being generated through the summing of BCD output signals. This is one of the most accurate methods used for analog to digital conversion. The unique "2¾ digit" concept (patent pending) provides you with double the accuracy and resolution by reading to the nearest half digit.

Other important features are:

- Neon lamps indicating "1" and the half digits 0 and 5.
- Neon-glow display.
- Low power drain (2 watts).
- Small compact size, molded case.
- Sampling rate 60 times per second.
- Display response time 16 millisecond (0.016 second).
- Out-of-range input indicated by simultaneous display of all numbers.
- Negative polarity indicated by soft blurred display.
- Normal mode rejection variable with external capacitor.
- May be mounted from front or rear of panel.
- Available Options:

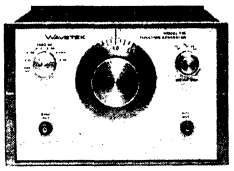
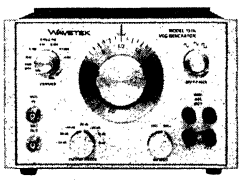
Oscillator/
Function Generator
0.2 Hz to 2 MHz
∿, ⊓, ⋀.
$295



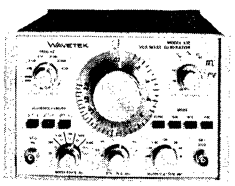
The Model 130 is the first general purpose laboratory test instrument that offers true function generator versatility at a low oscillator price. Its outputs are selectable and variable from a 50 ohm source with an auxiliary sync output for scope or system timing. The Model 130 is ideal for ultrasonic, audio and video applications — from trouble-shooting to exotic IC design.

Model 131A
Oscillator/VCG
0.2 Hz to 2 MHz
50Ω and 600Ω Output
∿, ⊓, ⋀.
$395



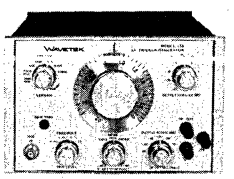
The Model 131A is a precision source of voltage controlled signals. The frequency may be dc-programmed or modulated with a wide-band ac signal and swept over a 1000:1 ratio covering the audio range of 20 Hz to 20 kHz in a single sweep. The output impedance is selectable with 50Ω floating or 600Ω balanced output. A 60 dB step attenuator gives precision control over output signal level for increased versatility.

Model 132
VCG/Noise Generator
∿, ⊓, ⋀.
0.2 Hz to 2 MHz
⊓⊓ 160 Hz to 1.6 MHz
⋀⋀ 10 Hz to 100 kHz
$795



The Model 132 adds digital and analog noise capability to further increase the versatility of the sine, square and triangle function generator. Waveforms, or noise outputs, can be used individually as signal sources. In addition, the waveforms can be combined with the noise to provide signals with calibrated signal-to-noise ratios over a 50 dB range, or to present a signal with an adjustable amount of random jitter.

Model 133
LF/Trigger/VCG
0.000002 Hz to 200 kHz
∿, ⊓, ⋀.
$495

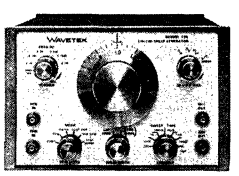


The Model 133 offers precision VCG sine, triangle and square wave output signals with up to 138-hour periods. The following additional features allow generation of special purpose waveforms such as the haversine: (1) waveform start/stop point control, (2) external triggering and gating and (3) adjustable waveform dc offset. This is an ideal instrument for use in the fields of mechanical and material testing and simulation of low frequency phenomena.

Model 134
Sweep/Trigger VCG
0.2 Hz to 2 MHz
∿, ⊓, ⋀, ◺, ⋀⋀, ⋀⋀.
$495

The Model 134 combines (1) a precision VCG having sine, square and triangle waveform outputs, and (2) an independent triggered ramp or sawtooth generator supplying the voltage to sweep the frequency of the first. This unit is virtually a portable oscillator, square wave generator, frequency shift keyer, and a sweep and tone burst generator in one compact package.

Model 135
Lin/Log
Sweep Generator
0.2 Hz to 2 MHz
∿, ⊓, ⋀, ◺, ⋀⋀, ⋀⋀.
$695



The Model 135 Sweep Generator is a Model 134 plus — The frequency of this instrument can be swept over a 1000:1 ratio by a selectable linear or logarithmic sweep function. Generator control voltage (GCV) output is featured. This voltage is proportional to the instantaneous frequency of the generator and can be used as a calibrated horizontal drive for an oscilloscope or X-Y recorder. Model 135 is ideally suited for audio testing where uninterrupted sweeping of the entire audio range is desired.

Model 136
VCG/VCA Generator
0.2 Hz to 2 MHz
∿, ⊓, ⋀, ◆◆◆
$595

The Model 136 VCG/VCA Generator provides a new dimension in oscillator/function generator performance. In addition to the VCG capability of the Wavetek Model 131A, this instrument provides true amplitude modulation (VCA). Either amplitude modulation, frequency modulation or a combination of the two can be externally controlled by remote programming voltages.

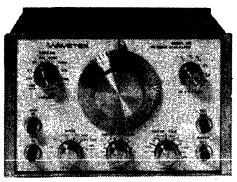
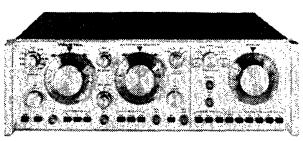
Model 144
HF Sweep Generator
0.0005 Hz to 10 MHz
$845



The Model 144 combines all the features of a Model 142 with an independent triggered ramp or sawtooth generator supplying a sweep voltage for the output waveforms. In addition to the internal sweep, terminals are provided for external voltage control of frequency (VCG) – either dc programmed or wide-band ac modulation. This unit also employs a precision output attenuator, variable in six 10 dB steps.

Model 146
Multifunction Generator
0.0005 Hz to 10 MHz
$1495



The Model 146 incorporates all of the features of Wavetek generators in one convenient unit. This unique instrument offers frequency and amplitude modulation, and triggered and gated operation. Actually, the Model 146 contains two complete function generators. The main generator operates from 0.0005 Hz to 10 MHz and the auxiliary generator from 0.004 Hz to 100 kHz. Caliper-type sweep/modulation indicators allow calibrated setting of amplitude and frequency modulation limits.

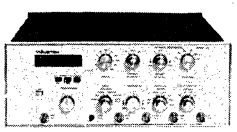
With Digital Readout
0.0005 Hz to 10 MHz
$1295



The Model 147 combines all the features of the 144 with an LED display of frequency and amplitude. The front panel display shows the frequency or maximum or minimum peak amplitude of the output signal. Frequency is available immediately, even for the very slow cycles. Another feature is variable dc voltage output, which is also displayed. This is a remarkably self-contained instrument.

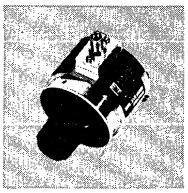
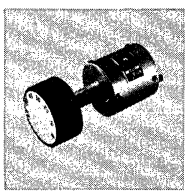
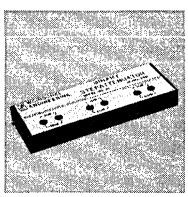
Many incremental attenuation ranges are available including 0 to 114 dB. All models feature low frequency sensitivity, individually calibrated dials, and low insertion loss. Uncalibrated versions also available for signal trimming. Connectors are stainless steel Type N or WPM (SMA). New miniature size Model 907 with dc to 2 GHz range features incremental phase shift of RF signal of only 1° /dB x f(GHz) and attenuation ranges of 0 to 10 dB and 0 to 20 dB.



STEP ATTENUATORS Weinschel has the largest selection of off-the-shelf step attenuators. They are available with manual or programmable control and with right-angle and in-line drive. All models are bi-directional. Numerous attenuation ranges are standard including 0 to 129 dB in 1 dB steps. Many frequency ranges are available including dc to 18 GHz. Prices start at as low as $295 for 0 to 60 dB in 10 dB steps. Weinschel has hundreds of custom designs to suit special applications.



BINARY STEP ATTENUATORS The Models 123 & 124 and 131 through 134 are fast switching (<25 msec), remotely controllable step attenuators for computer and automatic applications. All models are available with dc to 18 GHz or octave frequency bands. Life is 2 million steps per cell. Numerous combinations of attenuation range and incremental steps are available, including 0 to 110 dB in 10 dB steps (0 to 121 dB in 1 dB steps with 2 units in series). A logic driver for the binary attenuator is available to simplify computer interface.



RF COMPONENTS Our selection of RF components includes terminations, power dividers, mismatches, attenuation control heads, coaxial switches, stub tuners, barretter mounts, adapters, and connectors. Most of our components operate over the dc to 18 GHz frequency range. Some are available in miniature size.

ATTENUATION MEASUREMENTS We offer a variety of instruments for use in microwave parameter measurements. The Model 1810 RF Ratio Meter permits rapid and accurate insertion loss, gain, and SWR measurements at both fixed and swept frequencies. It has a dynamic measurement range of 30 dB RF and an accuracy of 0.02 dB/10 dB. Adding the Model 1811 RF Attenuation Controller to the Model 1810 system increases swept dynamic range to 60 dB. Accuracy remains 0.02 dB/10 dB.

SWEEP OSCILLATORS The Model 430A Solid State Sweep Oscillator has plug-in versatility for complete coverage of the 0.01 to 18 GHz range. All plug-in units are solid state fundamental oscillators, including 4 to 8 GHz, and are available with or without leveling. The Model 4310A Multiband Sweeper System is available in a choice of 19 configurations covering six frequency ranges. Electronically multiplexed systems cover any part of or the entire 0.01 to 18.0 GHz range in one continuous sweep. Features are optional 10 mW minimum leveled output (4 mW standard) to 18 GHz; electronically multiplexed RF output flat to ±1 dB; 13 msec continuous sweep of 4 bands provides flicker-free display; RF level and frequency programming; 0 to 100% symmetrical multiband sweeping, and exclusive automatic functions.

Why we think Brush recorders are your best choices.

CLEANEST TRACES. When you say hello to your Brush Recorder, you say good-bye to smudging, smearing, skipping and puddling traces. The reason: pressurized inking that forces a crisp, clean trace not just onto, but into the paper. Our pens never need priming, even after long periods of not being used.

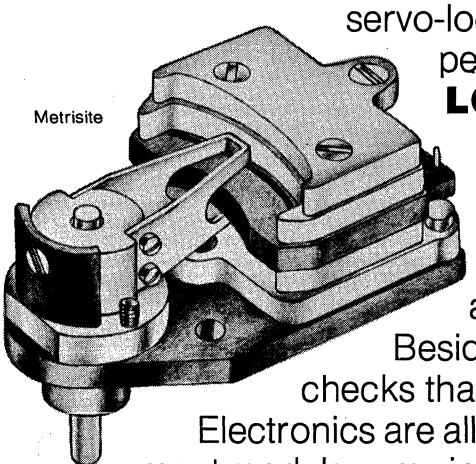
ACCURACY. Another plus for the Brush Recorders is our Metrisite® non-contact servo-loop feedback device. A system so accurate it enforces pen positioning at better than 99½% linearity.



Metrisite

LOW MAINTENANCE. We've carefully designed each instrument to require minimal care. For example, our Metrisite system eliminates bothersome maintenance problems. Like dirty pots, wear, cleaning. The Metrisite also eliminates slide wires and all the maintenance problems that go with them. Besides, we put every instrument through quality control checks that simply don't forgive mistakes.

Electronics are all solid-state in the recorders. And most models come in either portable or rack-mounted versions. All of them are compatible with our wide range of signal conditioners, so you can get the exact signal conditioners to suit your requirements.

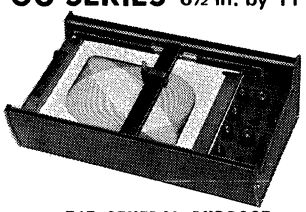
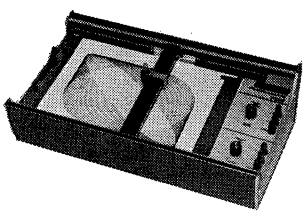
X-Y PLOTAMATIC RECORDERS

high performance at LOW COST

700 SERIES 8½ in. by 11 in. (DIN A4)



715 GENERAL PURPOSE



705 DEDICATED OEM

700 Series Recorders with Pad/Load®

The 700 Series recorders, while low in cost, still meet or exceed the performance specifications of many higher priced recorders. The new "PAD/LOAD®" paper handling system, operates three times faster than those available on conventional single sheet machines. A 50-sheet pad of paper is loaded into the recorder, and as each page is consumed, the operator simply tears off the used sheet, exposing a new sheet.

All 700 Series PLATAMATICS have ● I/C circuitry ● no mechanical or photo choppers ● clean fibre-tip pens ● electronic over-drive protection ● operate from switchable 115/230 V, 50-400 Hz power ● buffered feedback potentiometers for noise immunity ● ± 0.2% F.S. accuracy ● differential guarded inputs with 140 dB CMR ● constant 1 meg input impedance ● no servo gain adjustments

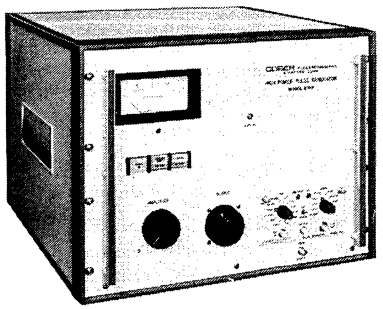
COBER MEANS HIGH POWER!

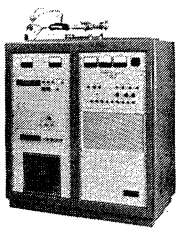
PULSE GENERATORS



Model 605P provides 24Kw pulses, 2200 volts at 11 amps. Pulse width is 50 nanoseconds to 10 milliseconds, rep rate 1 shot to 1MHz, with rise time of 20 nanoseconds. It drives microwave tubes, Gunn Diodes, and optic modulators, and is a versatile lab instrument.

Cober's pulse generators feature high power (kilowatts) with fast rise time (nanoseconds). A broad line is available from stock with pulse widths out to DC, both positive and negative polarities, and outputs floating to 50Kv. Plug-in accessories provide an extensive range of voltage and current combinations. One unique product is a universal grid pulser for microwave tubes and electron guns.

MICROWAVE GENERATORS



RFI, EMI and Microwave Component Testing needs require special microwave generators. Cober makes it almost as easy to obtain a special as it is a standard unit. Illustrated is Model 1326 which provides both pulse powers of 1.8KW and CW outputs of up to 500 watts. Frequency coverage is 350MHz to 10.475GHz.

MICROWAVE TUBE TEST EQUIPMENT

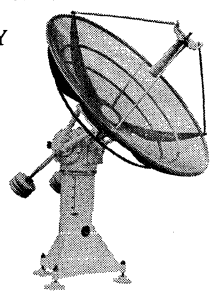
PRECISION SERVO-CONTROLLED PEDESTAL

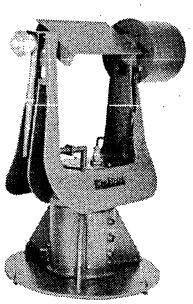
Continuous azimuth travel with ±100° elevation. Capable of symmetrical loads to 500 pounds with typical static positioning accuracy of ±0.10°. Solid state servo controller. Can be preprogrammed, operated in preposition select or auto-track mode with rates to 30°/sec.

AUTOMATIC TELEMETRY TRACKING SYSTEMS

Designed to use GSS precision servo-controlled pedestal and a variety of antennae from conical scanning to helix and cross dipole arrays. Positioning is by servo drive. A variety of frequencies and polarizations can be provided with remote control and auto-track.



AZIMUTH/ELEVATION POSITIONER



Model 8175 is a lightweight, precision Az/El positioner operated manually, by remote control, or by auto-track. Handles typical balanced loads of 75 pounds with rated velocity of 30°/sec. Acceleration of 30°/sec². Elevation −10° to 190°. Azimuth approximately ±360° or continuous. Drive by dual-channel, complementary transistor servo amplifier.

AUTO-TRACK INTEGRATION ACCESSORIES

Solid state couplers of angle-error sensing devices to Az/El pedestals for automatic tracking. Also provided is joystick control, automatic switchover to null detection, position indications, and retention of other pedestal control.

MOBILE OPTICAL TRACKING SYSTEM

The Mobile Optical Tracking System is a precision, high load capacity, servo-controlled position pedestal, mobilized for rugged terrain. It can be controlled locally from the pedestal, from its mobile control van or from a permanent site located up to 12 miles from the pedestal.

The pedestal is controlled by infrared or TV edge track auto-track systems, or by manual joystick control. Auto-override allows momentary selection of manual mode. A coast function allows the pedestal to continue at the established rate for a minimum of 10 seconds if target is lost.

Only two hours site installation and calibration time is required. Position accuracy is 4 arc seconds (static) and 0.003 mr/mr/sec (dynamic). Its angular displacement is 345° azimuth, −15° to +100° elevation. Stable tracking rates in the speed range of 5 arc sec/sec to 75 deg/sec may be obtained. Maximum symmetrical and balanced load capacity is 1480 pounds.

TWT CW AMPLIFIERS

10, 20, 100 AND 200 WATTS

STOCKED (LESS TUBES) FOR IMMEDIATE SHIPMENT

The Industry's most advanced Traveling Wave Tube Amplifiers have broadband microwave amplifying capabilities and supply stable and powerful signals for calibration testing and other high power applications.

The power supplies are designed to maintain excellent regulation with a line input voltage variation of ±10%. The filament voltage is a regulated DC voltage supply. The helix voltage is maintained with ±0.1% with a ripple of less than .05%. The beam supply is regulated to ±.02% and filtered to provide a ripple less than 0.1%. These characteristics result in superior spectral purity of the output signal. Tubes are operated in a depressed collector mode to reduce collector heat dissipation and prolong tube life.

Interlocks, overheat and overcurrent protective circuitry de-activate high power circuits should there be a fault. Metering is also included to provide performance verification and ease of maintenance.

Solid state modular design offers a wide variety of TWT Amplifier capabilities. In addition to the standard 10 to 200 watt amplifiers described in this brochure; custom modifications and designs are available on special order. MCL offers the following accessories on most models.

VSWR Protection
Output Power Monitoring
Slides for 19" Rack Mounting

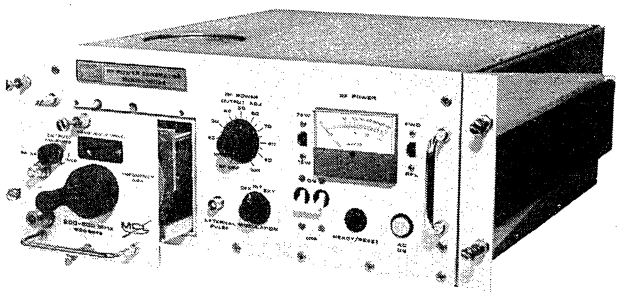
MODEL 15022
65 WATT 10 TO 2,500 MHZ
CW SIGNAL GENERATOR

ALL UNITS STOCKED FOR IMMEDIATE SHIPMENT



The Model 15022 is a compact high power signal generator which is completely solid state except for the long life vacuum tube used in the cavity oscillator. This highly reliable generator covers the 10 to 2500 MHz band with six plug-in cavity oscillator heads. A version which meets or exceeds MIL-STD-462 (RFI) and MIL-STD-810 (environmental) is widely used by the military in calibration laboratories and has been assigned a Federal Stock Number which is FSN 4931-152-1774 (MCL Model Number 15009).

This modern generator design provides the convenience of one knob frequency tuning which will permit frequency settings within ±1%, and front panel metering is provided to read forward or reflected power. Additional features include internal or external amplitude and pulse modulation. Optional external AM modulation is variable from 0 to 90%, 150 Hz to 10 KHz with an external source of 18 V across 16 Ohms. Amplitude level adjustment and a decoupled RF output sample port are also provided.

Regulated power supplies, conservative design, all solid-state (except oscillator) provides reliability and stability. Frequency stability of ±.003% after 10 minutes and power stability of ±.2db after one hour are minimum performance characteristics.

Plug-in cavity oscillator is protected against mismatch or loss of load. Other protection includes time delay sequenced turn-on and turn-off to insure adequate filament heating and adequate cooling at shut-down. These features make the 15022 an ideal laboratory tool.

CAPABILITIES/APPLICATION

CAPABILITIES

MCL has been in the business of providing microwave cavities and high power amplifier systems to the electronics industry for over a decade. In an effort to prevent dilution of technical strength, the company has limited its product lines to cavities, cavity related systems and R.F. accessories. This intense concentration in a limited area has created a pool of technical excellence without peer.

The competence and imagination of MCL engineering has been tested repeatedly by the electronic industry, and MCL has successfully answered the call, delivering in excess of 400 different cavity designs and over 300 unique systems and subsystems.

MCL products are in use throughout the world performing a myriad of tasks that stagger the imagination. MCL cavities are used to provide pin-point accuracy for offshore drilling operations, to test the electromagnetic susceptibility of heart pacemakers, to maintain control of weather satellites, to determine the altitude of commercial and military aircraft, and many other operations. Our equipment has been used to communicate with the Apollo capsule and will be used on the Sky Lab program. Some of our equipment has gone into space on unmanned space probes. Be it satellite, ground, ship or shore, plane, helicopter, or missile MCL has built an equipment to operate in the environment. We cover the field from cavities three inches long delivering 10 milliwatts to cavities four feet long delivering 100 plus kilowatts.

This experience can be applied **to your** microwave requirements by considering MCL a part of your design/development team.

Example: Output rise times of < 100 nanoseconds are available on special order. Likewise, we can furnish modulators with other output voltages and currents at average power levels to 100 watts. We invite you to discuss your requirements with your MCL sales engineer or write to the factory.

- Peak output voltage readout accuracy to 2.0% of full scale, from 100 pulses per second up.
- Pulse repetition rate: adjustable, 100 Hz to 10 kHz, via front panel step switch and vernier control.
- Pulse width: adjustable, 0.5 to 10 microseconds, via front panel step switch and vernier control. Switch accuracy, 2.0%.

Designed to fulfill the diversified and sophisticated demands of contemporary test equipment users, this unit embodies many "look ahead" features:

- Selection of three standard voltage ranges and accompanying sets of parameters:**
- Duty cycle readout: .001 to .01, with 2.0% accuracy.
- Overload cut-off: adjustable from .001 to .01, via front panel. Protects external equipment from damage.

This versatile instrument offers virtually unlimited usage in laboratory or field. It is designed as a companion unit to MCL's popular Series "E" pulsed oscillators. Also interfaces readily with other plate pulsed oscillator cavities, beacon type magnetrons, experimental laser circuitry and low power microwave tubes.

MODEL 10461 PULSE GENERATOR

FIVE KILOWATT PULSE GENERATOR

The Model 10461 Pulse Generator is continuously tunable from 900 to 1220 MHz which is the Tacan Band. The generator is extremely useful as a Tacan test set. Peak power output is five kilowatts at .01 duty cycle. Pulse width and pulse repetition rates are adjustable.

The instrument is complete with power supplies, grid pulse modulator, cavity oscillator, cooling, output circulator, and protective circuitry.

The power output is adjustable from 50 watts to 5.0 kilowatts. A three digit numerical read-out with calibration chart provides accurate frequency setting.

The 10461 is a solid state instrument except for the planar triode oscillator. An output circulator is provided to minimize frequency pulling and power variations due to load mismatch; operation into open or short circuit conditions will not damage the equipment.

*Please specify voltage desired.

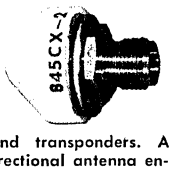
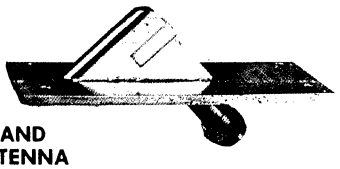
X-BAND ANTENNA
MODEL 835X

Loop Vee Antenna was developed primarily for aircraft application in association with an X-Band radar transponder. The antenna is a circularly polarized omni-directional antenna enclosed within a fiberglass radome. The antenna is characterized by its compactness and is extremely lightweight while still maintaining the electrical and environmental characteristics required by this type antenna. The height of the radome is approximately one-half inch and the diameter of the radome is approximately one inch. Mounting of the antenna is accomplished via a three-inch diameter mounting plate which also serves as a ground plane for the antenna. A C-Band version (Model 836C) of this antenna is available. **Freq.:** 9.0 - 9.69 GHz; **VSWR:** < 1.5:1; **Beamwidth:** 70° ; **Pol:** circular; **Power:** 1.5 kw peak; **Connector:** TNC; **Weight:** 1.5 oz.

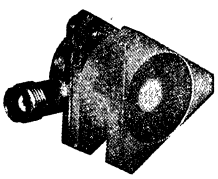
C AND X-BAND STUB ANTENNA



The Model 845CX-2 Stub Antenna was developed for airborne use with either C-Band or X-Band transponders. A vertical polarized omnidirectional antenna enclosed within a radome, it is compact and extremely lightweight while still maintaining the electrical and environmental characteristics of this type antenna. Height of the radome is approximately ¾"; diameter is approximately 1". The skin of the vehicle serves as the ground plane for the antenna due to the simplified mounting technique. Antenna mounting is accomplished via a "D" hole (.505 dia. X .480 flat) through the vehicle skin. It is then secured to the vehicle with a locking nut. **Freq:** 5.4-9.6 GHz; **VSWR:** ≤ 2.0:1; **Beamwidth:** omnidirectional; **Pol:** vertical; **Power:** 1.5 KW peak; **Connector:** TNC; **Weight:** 0.5 ozs.

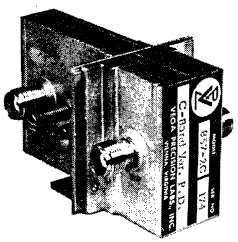


C-BAND ANTENNA
MODEL 801C is a lightweight slotted blade antenna developed as part of a C-Band Radar Transponder System for use on the Nike Apache Vehicle. Linear radiation coverage with minimum aerodynamic drag were key requirements in the design of this antenna. The body of the antenna is constructed of stainless steel which gives excellent reliability in missile environments with no degradation in electrical performance. The antenna may be used as a single element or in multi element arrays depending on the particular application and desired pattern coverage. The companion dividers are Models 853-2C, 854-3C and 855-4C (two-way, three-way and four-way respectively). **Freq.:** 5.4 - 5.9 GHz; **VSWR:** < 2.0:1; **Imp:** 50 ohms; **Pol:** Linear; **Connector:** TNC; **Weight:** < 3.0 oz.; **Power:** 1.0 kw peak.



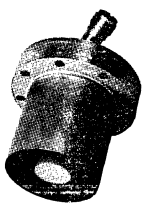
C-BAND ANTENNA
MODEL 820C

Antenna is an optical quartz-loaded, cavity backed helix radiator which produces a right hand circular polarized radiation pattern. The use of quartz material provides for high and low temperature stability with no degradation in electrical performance. Flush mounting is normally used on reentry vehicles with no performance deterioration as a result of reentry heat. Low thermal conductivity of the quartz material controls the heat transfer from the face of the antenna so that very little reentry heat is conducted to the antenna connector. This permits the use of standard mating connectors. Companion power dividers Models 853-2C, 854-3C and 855-4C are used for arraying two, three or four antennas about the missile. **Freq.:** 5.4 - 5.9 GHz; **VSWR:** < 1.5:1; **Pol:** RHC; power 1.5 kw peak; **Gain:** 6.0 db; **Beamwidth:** 130? **Temp.:** 1700° front surface exposure; **Weight:** < 2.0 oz.; **Shock:** 300 g's.

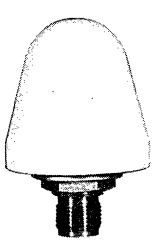


C-BAND POWER DIVIDER

MODEL 857-2C Variable Power Divider was designed to divide the output power of a C-Band Radar Transponder equally between two antenna elements when mounted in airborne vehicles and using unequal lengths of coaxial transmission lines. The design is such that the output power to each leg can be varied from a balanced condition to that of all power in either output leg. With the power divider adjusted to compensate for unequal cable losses, equal power will be radiated by each element of a two element array. The input VSWR is less than 1.3:1 and is tunable over the frequency range of operation. Also available are Models 856-2S (S-Band, 2.7 - 3.0 GHz) and 858-2X (X-Band, 9.1 - 9.6 GHz). **Freq.:** 5.4 - 5.9 GHz; **Insertion Loss:** < 0.5 db; **Power:** 1.0 kw peak; **Size:** 3 1/4" x 2 1/2" x 2"; **Weight:** 12 oz.

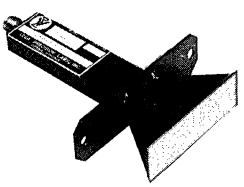


S-BAND ANTENNA
MODEL 815S was developed as part of a lightweight S-Band Antenna System for use in the Nike Tomahawk missile for purpose of transmitting tracking data. The antenna is a cavity backed helix with the helix embedded in quartz which is also used as the dielectric cavity. Mounting is accomplished via a mounting flange which can be adapted to a variety of mounting configurations. Flush mounting is used on reentry vehicles with no performance deterioration as a result of reentry heat. Low thermal conductivity of the quartz allows little of the heat to be conducted to the antenna connector therefore standard mating connectors may be used. A C-Band version of this antenna is also available. **Freq.:** 2.7 - 2.95 GHz; **Pol:** RHC; **Gain:** 7.0 db; **Beamwidth:** 130° nominal; **VSWR:** < 1.5:1; **Temp:** 1000° F, front surface exposure; **Vibration (random):** 48 g. rms; **Shock:** 78 g; **Acceleration:** 100 g.



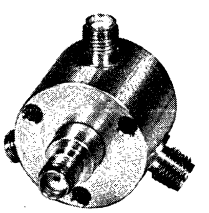
S-BAND STUB ANTENNA

The Model 832S Stub Antenna was developed for airborne application in association with S-Band transponders. It contains a vertical polarized omnidirectional antenna within the radome. The antenna is compact and extremely lightweight while still maintaining the electrical and environmental characteristics required by this type antenna. Height of the radome is 1½", diameter is 1⅜". The skin of the vehicle serves as the ground plane for the antenna due to the simplified mounting technique. Mounting of the antenna is accomplished via a "D" hole through the vehicle skin. It is then secured to the vehicle with a locking nut from inside the vehicle skin. **Freq:** 2.0-5.3 GHz; **VSWR:** ≤ 2.0:1; **Power:** 1.5 KW peak; **Connector:** TNC; **Weight:** 3.0 ozs.



X-BAND ANTENNA

The Model 844X-2 Flared Horn Antenna was developed for use in target drone applications. Radiation coverage is controlled to the desired beamwidths by the flared horn. A colinear type feed is employed to couple energy from the TNC input connector into the waveguide. Construction utilizes standard aluminum waveguide parts dip-brazed together. The radome is epoxied in position and covers the aperture. This flared horn antenna can be made available in other frequency bands utilizing the same design concept. Freq.: 8.4—9.6 GHz; VSWR: ≤2.0:1; Connector: Female TNC; Pol.: Linear; Gain (typical): +11.0 dB; Beamwidth (typical) E-Plane: 70°, H-Plane: 30°; Size: 5½ inches long; Weight: 3.0 oz.



POWER DIVIDERS

Versatility is the main feature of our two, three and four-way power dividers. Originally developed as part of an S-Band radar transponder system for the Nike Tomahawk missile, they are now used in a number of different instrumentation systems. Utilizing the appropriate power divider, pattern coverage can be obtained with two, three or four antennas in operation. The body of the power dividers is constructed of stainless steel, providing excellent reliability in any environment. The input arm goes through one or more transformer stages before coupling with two or more output arms to complete the power division. TNC connectors are brazed to the power divider body in which mounting holes are provided.

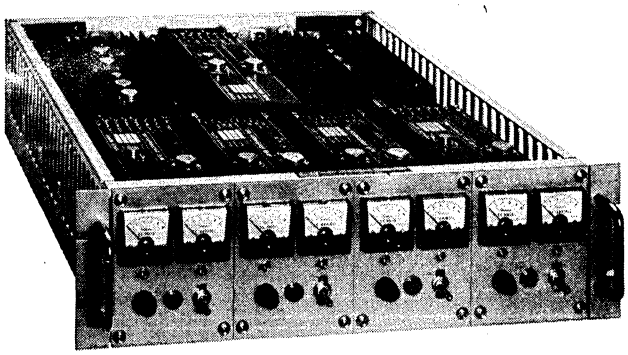
standard rack adapters

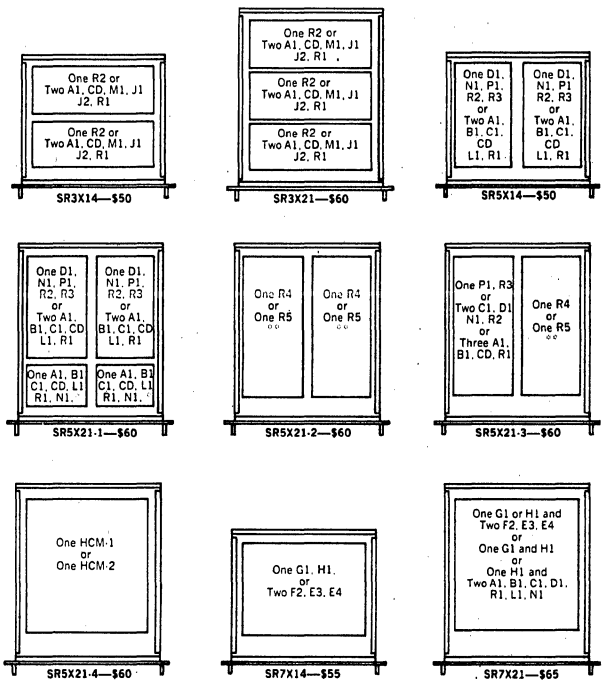
ACDC now offers the SR Series rack adapters with standardized configurations to speed delivery. Nine different combinations of size and capacity are available without engineering design charge. The rack adapters and accessories like our power supplies are guaranteed forever.

All rack adapters are constructed from 14 gauge steel. Panels and bottom chassis are welded together and finished with clear cad plating. All holes for mounting power supply modules, front panels, barrier strips and shunts are provided.



It's Easy to rack mount ACDC Power Supply Modules:

STEP 1
Determine case sizes of power supply modules to be mounted from ACDC catalog. Select the standard rack adapter configurations that fit your application.



* D1 case size can be installed in the two front spaces of SR5X21-1 if P1 case size is not installed in either of the two back spaces

** When installing either a case size R4 or R5 specify module adapter. ADP-4 for case R4 and ADP-5 for case R5

STEP 2
Select the front panel.
Options range from blank front to metered control panels.

Switch panels contain a line switch, red pilot light and fuse holder. The 3½" metered panels provide in addition a 1½" volt meter and ammeter. The 5¼" and 7" metered panels are furthered equipped with 2 selector switches designed to monitor 2 outputs.

	3½" Rack		5¼" Rack		7" Rack	
Full panel blank	RP3XF	$ 9.00	RP5XF	$ 9.00	RP7XF	$ 9.50
¾ panel blank	RP3X3	8.00	RP5X3	8.00	RP7X3	8.50
½ panel blank	RP3X2	6.50	RP5X2	6.50	RP7X2	7.00
¼ panel blank	RP3X1	5.00	RP5X1	5.00	RP7X1	5.50
Switch Panel	RP3X1 P	18.00	RP5X1 P	18.00	RP7X1 P	18.00
Metered Panel	RP3X1 M	45.00	RP5X1 M	45.00	RP7X1 M	45.00

STEP 3
Determine the number of Barrier Strips required to terminate the power supply modules. Select meter shunts and chassis slides if required. All applications where a single ammeter monitors two outputs (one dual or two single) requires two shunts. A shunt is required if power supply being monitored has a current rating of 10 amps or more.

Barrier Strip — 8 terminals	RH8	$ 1.90
Current Shunt (Specify)	RT (Amps)	15.00
Chassis Slides for 14"	RS1X14	48.00/pair
Chassis Slides for 21"	RS1X21	52.00/pair

It's that simple

Rack Adapters can be shipped as a kit or factory assembled and wired.

Kit Form: No holes to drill. Assemble power supply modules, front panel, barrier strips, and slides. All you need is a screwdriver, wrench, and hardware.

Factory Assembled: All items are assembled by factory personnel ready to wire.

general specifications

	OEM	CD CARD TYPE	TR TRIPLE OUTPUT	HCM HIGH CURRENT
Output	4 to 32 volts ±12 and ±15 volts up to 36 amps	4 to 32 volts ±12 and ±15 volts up to 1.5 amps	5, ±12 volts 5, ±15 volts up to 10 amps	5 to 28 volts up to 100 amps
Input	105-125VAC, 47-63Hz (usable also to 400Hz — consult acdc for derating). 10-250VAC input is available		105-125 VAC or 210-250 VAC; 47-63Hz (must be specified)	105-125 VAC or 210-250 VAC; 47-63 Hz
Regulation	0.1% +5mV NL-FL. ±0.1% ±5mV for ±10% input variation.			
Ripple	2mV RMS and 20mV P-P max.			
Temperature Stability	Typical 10mV for eight hour period after initial warmup.			
Transient Response	Output voltage returns to within regulation limits within 50μsec in response to a 50% step change in load current.			
Remote Sensing	Terminals are provided to maintain regulation at the load, compensating for the DC voltage drop in the load cable.			
Remote Voltage Adjustment	Remote voltage adjustment is provided. Consult factory.			
Ambient Temperature	Operating: See tables for output rating vs. temperature. Storage: —55°C to +85°C.			
Overload Protection	All models are inherently protected against overload and short circuits of any duration. No fuses or reset buttons are used — automatic recovery is electronically accomplished.			
Overvoltage Protection (Optional)	Any model can be furnished with overvoltage protection which "crowbars" the output in the event of a rise in the output voltage of 10% or 2 volts (whichever is greater). On dual outputs, overvoltage protection "crowbars" both voltages to near zero in the event of a rise of one or both of the voltages of 20% or 4 volts (whichever is greater). (Fixed on CD series.)			
Connector	Barrier strip termination	Power supply mates with standard PC edge card connector (22x.156x1/16" thick). Barrier strip available as option.	Barrier strip termination	Barrier strip and Stud terminals
Output Impedance	DC — 1KHz 0.001 R_L or 0.005 ohm max. 1-100KHz 0.005 R_L or 0.5 ohm max. (whichever is greater). R_L = rated load.			DC - 1 KHz .003 ohm max. 1K - 100 KHz .15 ohm max.
Temperature Coefficient	0.02%/°C max.

Solid State Frequency Changers Inverters-Uninterruptible Power Systems

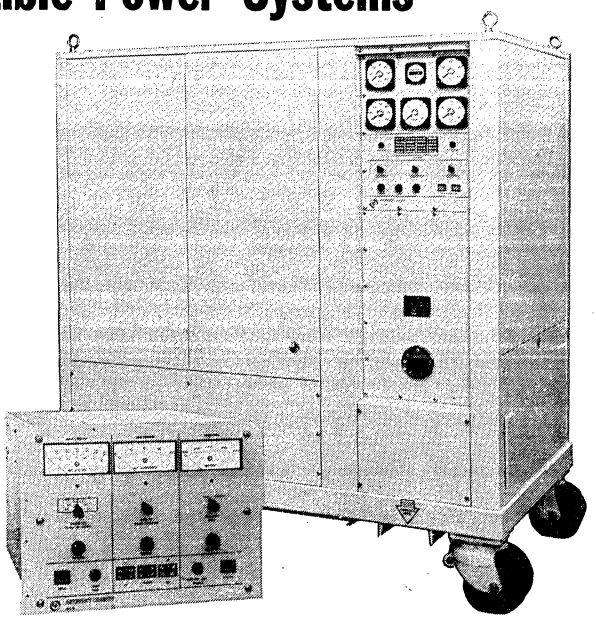
A•L•S has achieved major innovations in power conversion techniques and power systems control. These accomplishments enable A•L•S to offer, at competitive prices, frequency changers, inverters and uninterruptible power systems embodying the best characteristics of both solid state and rotating machine equipments without the performance and reliability limitations of either.

The SMG Series General Purpose Frequency Changers are available in 50, 60, or 400 Hz output and will accept 45 to 450 Hz input. There are ten standard models available from 5 to 375 KVA. Single phase output systems to 50 KVA are also available.

In addition to their superior performance, the SMG Series offer many truly unique features, the most important of which are listed below.

EXCLUSIVE FEATURES

- Unity power factor rated. Will handle continuous full rated load from .5 leading to .5 lagging power factor.
- Reserve capacity to handle surge loads. Will start and run one horsepower of motor load per KVA of rating.
- Convenient, reliable parallel operation. Any number of units may be paralleled to increase capacity.
- Status lamps indicate specific cause and power circuits deactivate in the event of abnormal line voltage, sustained overload, excessive temperature or output voltage.
- Very low open loop output impedance. Less than 5% transient voltage excursion for 50% step load change.
- Operates with any input phase rotation. No need to worry about expensive blow-ups each time the input source location is changed.
- Integral KVA meter and switch monitor each phase or total load KVA. Accuracy, ±2% regardless of load unbalances.
- Cannot be damaged by progressively applied or stepped overloads, or by input line transients.
- High input power factor and low line distortion. Does not control output by phase firing SCR's in the rectifier section.
- Plug-in modules can be easily replaced and are designed so that a component failure in one module will not produce a consequent failure of any other module.
- Switchboard instrumentation. 4½" square, 250° instruments are used exclusively on all units 50 KVA and above.



Model SMG-5. 5 KVA, 400 Hz Output.

Model SMG-150. 150 KVA, 400 Hz Output.

SPECIFICATIONS

INPUT

Voltage: Available in all standard, domestic and foreign nominal voltages ±10% or per customer specifications. Frequency 45 to 450 Hz.

OUTPUT

Voltage: Available in all standard, domestic and foreign voltages or per customer specifications. Output adustment is ±10% from nominal or optionally 0 to 110%. Regulation is ±0.5% for the combined effects of line, load and temperature.

Waveform: 2% THD at full load. 1% available optionally.

Current: Adjustable current limit from 75 to 125% of ratings or optionally from 0 to 125%. Manual current limit override allows over 200% of ratings for motor starting. Regulation is ±0.5% for the combined effect of line, load and temperature.

Power Factor: Full rated power from 0.5 capacitive to 0.5 inductive.

Phase Displacement: 120° ± < 1° for balanced loads. Load may be 100% unbalanced. Line-to-line voltage will remain within ±1% from the average for load unbalances of 50%.

Incidental Modulation: 0.025% peak FM and 0.025% to 1.0% peak AM depending on input power frequency and phase unbalance.

Response Time: 1 cycle of output.

Recovery Time: 4 cycles of output.

Frequency: 50, 60 and 400 Hz adustable ±5% are standard. Stability is ±0.1% constant environment, ±0.5% from cold start. Quartz time base with ±0.001% stability is available optionally.

Instrumentation: All indications are accurate to ±2% of full scale. Provided are input/output voltmeter(s), ammeter(s), KVA meter, dial and pointer hertzmeter and running time meter.

Status Lamps: Depending on model, 6 to 20 lamps indicate system operating status.

Protection: Combination of circuit breakers, fuses, sensing circuitry, air switches, thermostats and contactors positively protect the unit from fault loads, improper input voltages and consequential power train damage.

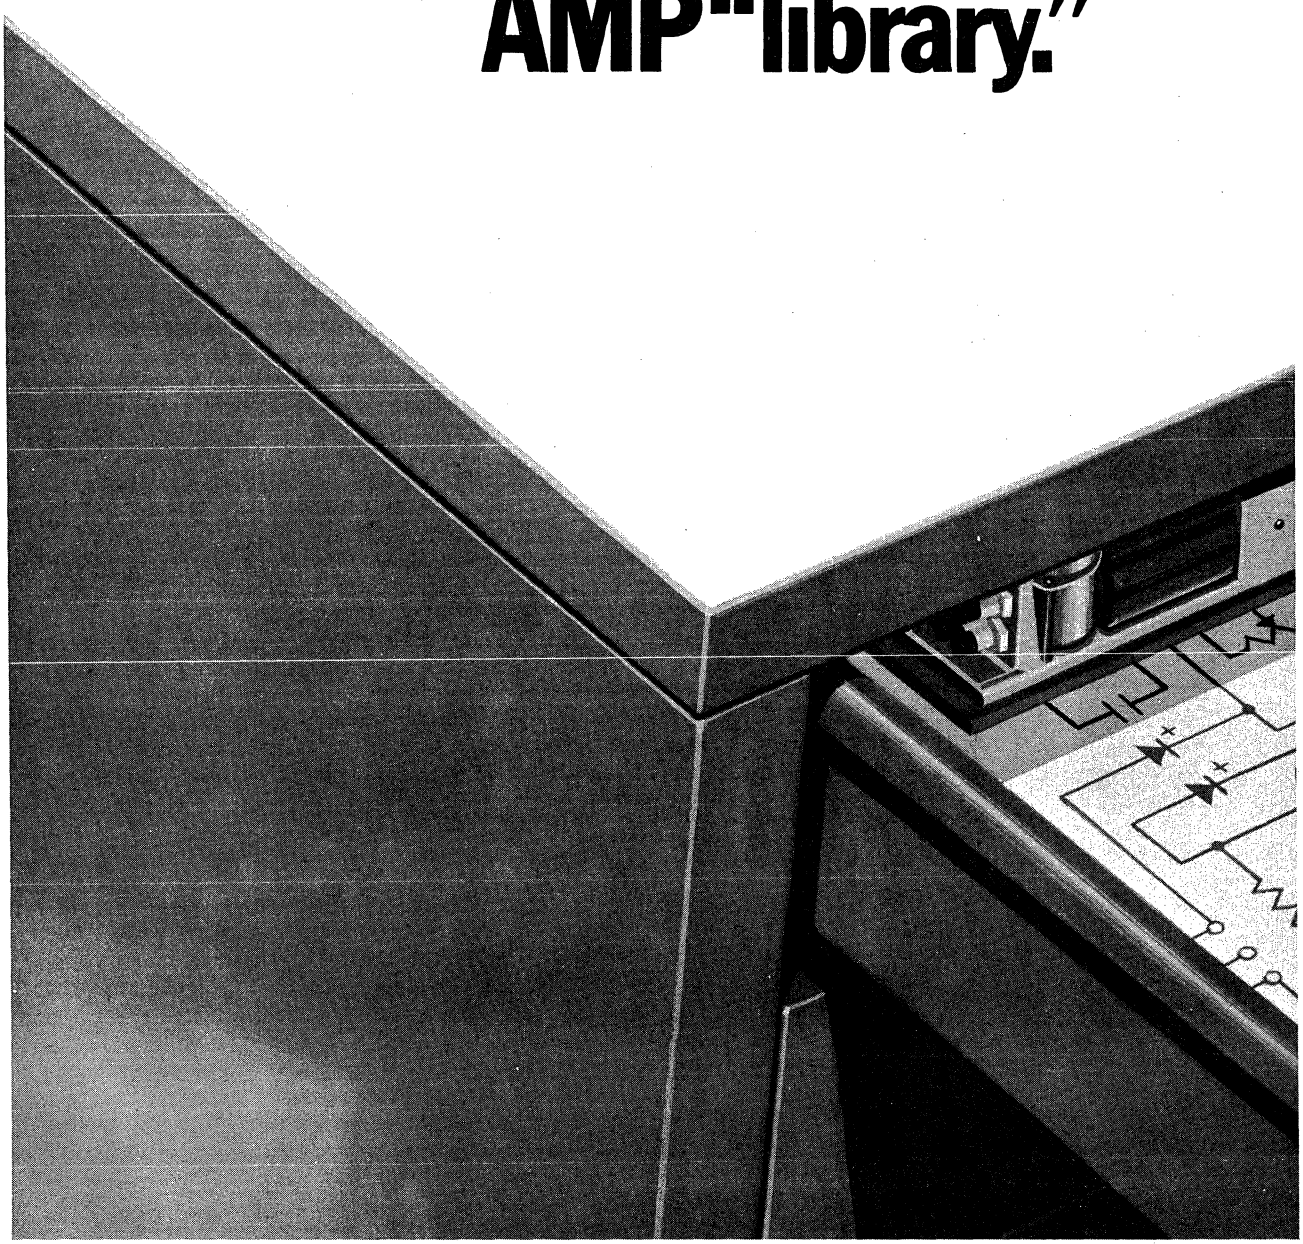
Environment: 0-50°C continuous, full ratings.

EMI

Shielded and filtered. Meets most EMI requirements. Optional filters for the most stringent requirements can be provided.

Looking for a custom power supply?

Consult the AMP "library."



You'll find over 1000 custom designs—up to 0 to 60 KV, and 2 KW. The result of proven performance in 20 years' experience in power supply design. In high-, low- or combination-voltage configurations.

DC TO AC UNIVERSAL INVERTERS

New, universal inverters for operating 110-v., 60 cycle AC equipment from DC voltages in autos, buses, trucks, boats, trains, planes and DC districts. Designed especially for standard 110-volt AC tape recorders, TV sets, radios, PA systems, electric razors, test equipment, etc. Units are carefully engineered and ruggedly constructed to provide long life operation. All feature complete RF interference suppression and exceptional frequency stability. Have operating efficiency in excess of 75%. Four-point voltage regulator corrects output voltage for minimum and maximum loads, and also helps compensate for input voltages lower or higher than normal. Inverters are recommended for use with loads having power factors in excess of 70%. Built-in toggle switch selects most efficient operation for use with TV sets or tape recorders. Inverters are not recommended for use with large motor driven appliances such as refrigerators, washing machines, etc. All have On-Off switches. Housed in attractive brown hammerloid metal cabinet with convenient leather carrying strap. Sizes: Standard Model RSF, 8½x9⅞x5¼"; Heavy-Duty Model RHG, 6⅞x11¼x 8½"; Extra-Heavy-Duty Model HSJ, 6½x12⅞x8½". With battery clips for instant connection to power source. Models with "P" suffix equipped with adapter cord for use in auto cigarette lighter receptacles. *Recommended for 24 volt battery operation. **Before ordering, check wattage of equipment with which inverter will be used.**

SOLID STATE INVERTERS

Specially Designed to Provide 117 Volt 60 Cycle AC Power for the Operation of Tape Recorders, VTR Equipment, Public Address Systems, TV Sets, Ham Gear, Small Portable Tools and Appliances, Test Instruments, Closed Circuit TV, Scientific Laboratory and Hospital Equipment, Small AC-DC Universal Motors, Fluorescent and Incandescent Lamps from 12 Volt DC Storage Battery Power in Automobiles, Buses, Trucks, Campers, Mobile Homes, Boats, and Aircraft.

ATR SOLID STATE Inverters are Universal Type Inverters recommended for the applications as listed above plus hundreds more! These Inverters are very well filtered and feature quick starting, frequency stability with varying load and input voltage, rugged heavy-duty construction, reverse polarity protection, and built-in power factor corrector utilizing a simple toggle switch. With ATR Inverters, the need for special equipment is eliminated. They are designed for quiet, long-life operation at high efficiency and maximum reliability. All models indicated here are equipped with heavy duty power transistors and plug-in frequency reed for automatic frequency control. These Inverters also come equipped with four-point voltage regulators which make possible the correct output voltage for minimum to maximum loads and also help compensate for input voltages which are lower or higher than normal. The operating efficiency is approximately 80%. To figure approximate current consumption from storage battery, divide the rated input wattage of the load being operated by the storage battery voltage, and further divide this answer by .80 which will give the approximate current consumption from the battery based on the actual load being operated. These Inverters are recommended primarily for use with loads having power factors in excess of 70%. Inverters come complete with battery cables ready for operation.

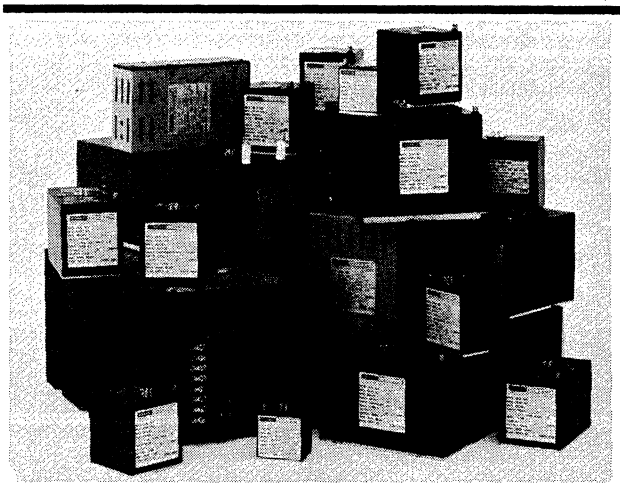
The Next 13 Pages List 1070 Regulated Modules with Specifications and Prices



The most complete line of small size MIL-Spec and OEM type power modules available in the industry is fully described in the following 13 pages. The Abbott line of power modules includes output voltages from 3 volts to 740 volts DC, output current from 2 milliamperes to 20 amperes and output power from 1 watt to 300 watts. Sizes, weights, regulations and environments are shown for the various input and output powers. Abbott is proud to continue its policy of introducing new products to meet the growing demands of our customers by listing four new lines of power modules this year: the Model "LC" series of OEM 60 Hz to DC low cost units; the Model "RN" series of 60 Hz to DC industrial units; the Model "VN" series of high-efficiency 60 Hz to DC switching regulated units (the first standard line of hermetically sealed, hi-efficiency units available from any manufacturer); and the Model "KN", "LN", and "PN" series of DC to 60 Hz Sine Wave inverters (the lowest cost units available anywhere). Look through the next 13 pages and you may find the power module you want is a standard Abbott model.

LINE REGULATION: 0.1% or 10 mV (whichever is greater), for input change of 103 to 127 VAC.

LOAD REGULATION: 0.1% or 10 mV, whichever is greater), from no load to full load.

RIPPLE: 10 mV rms; 30 mV peak-to-peak.

OUTPUT VOLTAGE ADJUSTMENT RANGE: Voltage is continuously adjustable between the limits shown on the table by means of a screwdriver adjustment potentiometer.

ISOLATION VOLTAGE: 300 VDC between output terminals and chassis ground.

INSULATION RESISTANCE: 50 megohms between output terminals and chassis ground when measured at 50 VDC.

POLARITY: Inputs and outputs are isolated, either positive or negative side may be grounded.

TEMPERATURE: Operating: 0°C to +50°C ambient without derating, forced air or heat-sinking. Storage: −55°C to 85°C.

TEMPERATURE COEFFICIENT: 0.08% per degree Centigrade.

ALTITUDE: 10,000 feet above sea level.

SHORT CIRCUIT PROTECTION: Each unit is completely protected against an overload or short circuit of any duration. The output voltage automatically restores to normal when the overload is removed within approx. 25 msec.

INPUT TRANSIENT PROTECTION: 180 VAC for 0.1 sec.

LOAD TRANSIENT RECOVERY TIME: Output voltage returns to regulation limits within 75 microseconds after a 50% step change in load current. Maximum overshoot/undershoot is 5% of nominal output voltage.

TURN ON/TURN OFF OVERSHOOT: The output voltage overshoot during "turn on" or "turn off" will not exceed 1% of the output voltage.

REMOTE ERROR SENSING: Each unit contains a means by which the regulator circuit monitors the voltage directly at the load using extra "sensing" leads. The resulting circuit action compensates for a DC voltage drop up to 0.5 volts in the load leads.

OVER VOLTAGE PROTECTION: Additional circuitry will reduce the output voltage to approximately 1 VDC within 25 μsec typ., if the output voltage rises 10% or 2 VDC (whichever is greater) above nominal. Available as an optional feature by adding "-1" to the model number and $8 ($16) for dual output units) to the 1-24 piece price.

OUTPUT IMPEDANCE: DC to 1K Hz — .008 R_L ohms or .03 ohms, whichever is greater.
1K Hz to 10K Hz — .008 R_L or .08 ohms, whichever is greater.
10K Hz to 100K Hz — .015 R_L or .30 ohms, whichever is greater.
R_L = rated load resistance.

RELIABILITY: The Mean Time between failure (MTBF) per MIL-HDBK-217A under worst case operating conditions is in excess of 100,000 hours per single output units and in excess of 70,000 hours per dual output units. For example: LC12T10 - 114,268 hours (MTBF); LC28T1 - 158,290 hours (MTBF); LLC12T5 - 75,593.

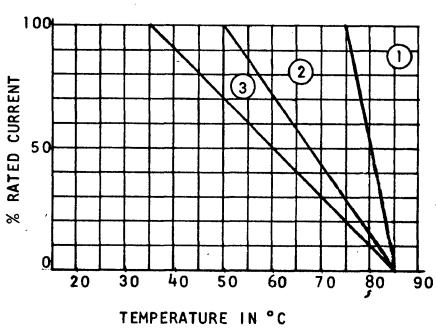
CURRENT VS TEMPERATURE CURVES



specifications

INPUT VOLTAGE RANGE: 100 to 132 VRMS

INPUT FREQUENCY RANGE: 47 to 440 Hz, 1 phase

OUTPUT VOLTAGE AND CURRENT: See specific models listed in table

LINE REGULATION: 0.04% or 5 mv (whichever is greater) for input change of 100 to 132 VRMS with load constant

LOAD REGULATION: 0.1% or 20 mv (whichever is greater) for change from no load to full load with line constant

RIPPLE: 0.02% or 5 mv RMS (whichever is greater); 50 mv peak-to-peak maximum, measured with scope having 25 MHz bandwidth

OUTPUT VOLTAGE ADJUSTMENT: Voltage is continuously adjustable between the limits shown in table by means of an externally accessible screwdriver adjustment potentiometer

ADJUSTMENT RESOLUTION:

Nom. Output Voltage	Resolution
3-16 vdc	35 mv
18-30 vdc	60 mv

ISOLATION VOLTAGE: 500 vdc input to output and input to case — 200 vdc output to case

INSULATION RESISTANCE: 50 megohms minimum between input and output, input and case, and output and case when measured at 50 vdc

TEMPERATURE RANGE: Operating: −20°C to +80°C (see curves below)
Storage: −55°C to +85°C

TEMPERATURE COEFFICIENT: 0.03% per degree centigrade maximum — 0.01% per degree centrigrade typical

SHORT CIRCUIT PROTECTION: Each unit is completely protected against a short circuit of any duration. The output voltage automatically restores to normal when the short is removed

INPUT TRANSIENT PROTECTION: 180 vac for 0.1 second

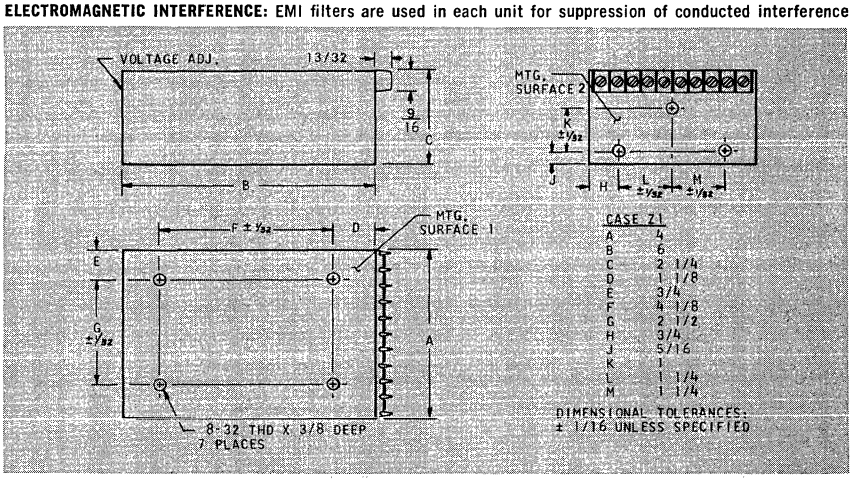
OVERVOLTAGE PROTECTION: Internal circuitry will reduce the output voltage to approximately 1 vdc within 15 microseconds if the output voltage rises 10% or 2 vdc (whichever is greater) above nominal. Available as an optional feature by adding "−1" to the model number and $10.00 to the 1-4 piece price

LOAD TRANSIENT RECOVERY TIME: Output voltage returns to regulation limits within 200 microseconds in response to a step change of 50% in load current. Typical over/undershoot is less than 10% of output voltage

PARALLEL OPERATION: Any two identical units may be connected in parallel. Output should be derated to 90% of rated current

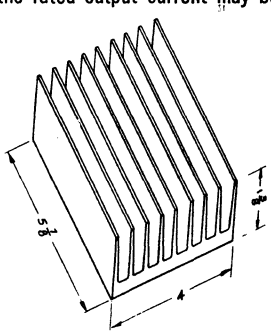
WEIGHT: 3.0 pounds maximum

ELECTROMAGNETIC INTERFERENCE: EMI filters are used in each unit for suppression of conducted interference



OUTPUT CURRENT VS TEMPERATURE

1) CONDUCTION COOLING — Mounting Surface 1 should be attached to a heat sink plate or chassis. The percentage of rated output current that may be drawn from any "Z" model at various mounting surface temperatures is indicated by Curve ①. Thus, 100% of the rated output current may be drawn at a **mounting surface temperature** of 75°C.



2) CONVECTION COOLING — A thermal finned radiator, Model TRZ1, may be attached to Mounting Surface 1. Using Mounting Surface 2, install the unit with fins in a vertical position. Curve ② indicates the percentage of rated output current that may be drawn from any "Z" model in this configuration at various **ambient temperatures.** Thus, 100% of the rated current may be drawn at 50°C **ambient temperature.** Model TRZ1, shown at right, adds 1⅜" to Dimension "C." Price is $4.00 each for 1 to 4 pieces.

3) RADIATION COOLING — Units may be installed on Mounting Surface 2 with **no** additional **heat sinking.** The percentage of rated current that may be drawn from any "Z" model at various ambient temperatures is indicated by Curve ③. The ambient temperature should be measured within ¼ inch of Mounting Surface 1 in still air. Thus 100% of the rated current may be drawn at 35°C **ambient temperature.**

specifications

INPUT VOLTAGE RANGE: 105 to 125 VRMS
INPUT FREQUENCY RANGE: 380 to 420 Hertz, 1 phase
INPUT POWER: Per MIL-STD-704A for category B equipment
LINE REGULATION: 0.2% or 10 mv (whichever is greater) for input change of 105 to 125 VRMS
LOAD REGULATION: 0.2% or 20 mv (whichever is greater) for change from no load to full load
RIPPLE: 0.02% or 5 mv RMS (whichever is greater) 25 mv peak-to-peak max. each output (25 MHz bandwidth)
TRACKING ACCURACY: The negative output will track the positive output to within 1.0% or 100 mv (whichever is greater) for all rated conditions of input voltage, output current, operating temperature, and output voltage adjustment.
OUTPUT VOLTAGE ADJUSTMENT: Voltage is continuously adjustable between the limits shown in the table by means of an externally accessible screwdriver adjustment potentiometer.
ADJUSTMENT RESOLUTION: 25 mv for outputs up to ±4.5 vdc; 35 mv for outputs ±5.0 thru ±15 vdc; 60 mv for outputs ±16 vdc and above
ISOLATION VOLTAGE: 750 vdc input to output and input to case: 200 vdc output to case
INSULATION RESISTANCE: 50 megohms minimum between input and output, input and case, and output and case when measured at 50 vdc
TEMPERATURE RANGE: Operating: −55°C to +100°C maximum at center of mounting base
Storage: −55°C to +125°C
TEMPERATURE COEFFICIENT: 0.03% per degree centigrade maximum
ENVIRONMENT: Encapsulated to meet the environmental requirements of MIL-STD-810B and MIL-E-5400K, Class 2, including: altitude (to a vacuum), vibration, shock, acceleration, sand, dust, humidity, salt spray, fungus, explosion, etc.
SHORT CIRCUIT PROTECTION: Each unit is completely protected against an overload or short circuit of any duration. The output voltage automatically restores to normal when the overload is removed.
INPUT TRANSIENT PROTECTION: In accordance with MIL-STD-704A, Figure 3, Limit 1 (180 vac for 0.1 seconds)
OVERVOLTAGE PROTECTION: Overvoltage protection modules are available for use with these units. Please consult the factory.
LOAD TRANSIENT RECOVERY TIME: Output voltage returns to regulation limits within 200 microseconds after a 50% step change in load current.
ELECTROMAGNETIC INTERFERENCE: Built to meet the requirements of MIL-STD-461 for generation of and susceptability to radiated and conducted interference.
RELIABILITY: The Mean Time Between Failure (MTBF) per MIL-HDBK-217 under worst case operating conditions of full rated output current, 125 vac input voltage, and +100°C base plate temperature, ranges from 48,450 hours for Model WW30D4.0 to 67,385 hours for Model WW3D0.3.

specifications

INPUT VOLTAGE RANGE: 24 to 30 vdc.

LINE REGULATION: 0.1% or 10 mv (whichever is greater) for input change of 24 to 30 vdc with load constant.

LOAD REGULATION: 0.1% or 20 mv (whichever is greater) for load change of no load to full load with line constant.

RIPPLE: 0.02% or 5 mv RMS (whichever is greater) 50 mv peak-to-peak maximum, measured with scope having a bandwidth of 25 MHz.

OUTPUT VOLTAGE ADJUSTMENT: Voltage is continuously adjustable between the limits shown in the table by means of an externally accessible screwdriver adjustment potentiometer.

ADJUSTMENT RESOLUTION:

Nominal Output Voltage	Resolution
5 thru 16 vdc	35 mv max.
18 thru 50 vdc	60 mv max.
55 thru 95 vdc	90 mv max.

ISOLATION VOLTAGE: 200 volts DC between input and output, input and case, and output and case.

INSULATION RESISTANCE: 50 megohms minimum at 50 volts DC between input and output, input and case, and output and case.

POLARITY: Inputs and outputs are isolated; either positive or negative side may be grounded.

TEMPERATURE RANGE: Operating: −55°C to +100°C maximum at center of mounting base.
Storage: −55°C to +125°C.

TEMPERATURE COEFFICIENT: 0.03% per degree centigrade maximum.

ENVIRONMENT: Encapsulated to meet the environmental requirements of MIL-STD-810B and MIL-E-5400K, Class 2, including altitude (to a vacuum), vibration, shock, acceleration, sand, dust, humidity, salt spray, fungus, explosion, etc.

SHORT CIRCUIT PROTECTION
Each unit is completely protected against an overload or short circuit of any duration. The output voltage automatically restores to normal when the overload is removed.

INPUT TRANSIENT PROTECTION: MIL-STD-704A, Limit 1, Category B (80 volts for 0.1 sec.).

OVER VOLTAGE PROTECTION: Over voltage protection modules are available for use with these units. Please consult the factory.

LOAD TRANSIENT RECOVERY TIME: Output voltage returns to regulation limits within 100 microseconds after a 50% step change in load current.

OUTPUT IMPEDANCE:
DC to 1 K Hz — 0.004 R_L or 0.04 ohm max.
1K Hz to 10K Hz — 0.015 R_L or 0.15 ohms max.
10K Hz to 100K Hz — 0.030 R_L or 0.50 ohms max.
R_L = Rated Load.

ELECTROMAGNETIC INTERFERENCE: Built to meet the requirements of MIL-STD-461 for generation of and susceptability to radiated and conducted interference.

RELIABILITY: The mean time between failure (MTFB) per MIL-HDBK-217 under worst case operating conditions of full rated output current, 30 vdc input voltage, and +100°C base plate temperature, ranges from 41,305 hours for Model C5D10 to 55,463 for Model C95D0.25.

features

- 1% Tracking Accuracy
- 0.2% Regulation
- Low Peak-To-Peak Ripple
- RFI/EMI to MIL-STD-461
- Hermetically Sealed
- +100°C Operation

specifications

INPUT VOLTAGE RANGE: 24 to 30 vdc.

LINE REGULATION: 0.2% or 10 mv (whichever is greater) for input change of 24 to 30 vdc with load constant.

LOAD REGULATION: 0.2% or 20 mv (whichever is greater) for load change of no load to full load with line

RIPPLE: 0.02% or 5 mv RMS (whichever is greater), 50 mv peak-to-peak maximum for each output, measured with scope having bandwidth of 25 MHz.

TRACKING ACCURACY: The negative output will track the positive output to within 1.0% or 100 mv (whichever is greater) for all rated conditions of input voltage, output current, operating temperature, and output voltage adjustment.

OUTPUT VOLTAGE ADJUSTMENT: Voltage is continuously adjustable between the limits shown in the table by means of an externally accessible screwdriver adjustment potentiometer.

ADJUSTMENT RESOLUTION: 25 mv for outputs up to ±4.5 vdc; 35 mv for outputs ±5.0 to ±15 vdc; 60 mv for outputs ±16 vdc and above.

ISOLATION VOLTAGE: 200 volts DC between input and output, input and case, and output and case.

INSULATION RESISTANCE: 50 megohms minimum at 50 volts DC between input and output, input and case, and output and case.

POLARITY: Inputs and outputs are isolated; either positive or negative side may be grounded.

TEMPERATURE RANGE: Operating: −55°C to +100°C maximum at center of mounting base. Storage: −55°C to +125°C.

TEMPERATURE COEFFICIENT: 0.03% per degree centrigrade maximum.

ENVIRONMENT: Encapsulated to meet the environmental requirements of MIL-STD-810B and MIL-E-5400K, Class 2, including altitude (to a vacuum), vibration, shock, acceleration, sand, dust, humidity, saltspray, fungus, explosion, etc.

SHORT CIRCUIT PROTECTION: Each unit is completely protected against an overload or short circuit of any duration. The output voltage automatically restores to normal when the overload is removed.

INPUT TRANSIENT PROTECTION: In accordance with MIL-STD-704A, Figure 9, Limit 1 (80 vdc for 0.1 sec.).

OVERVOLTAGE PROTECTION: Overvoltage protection modules are available for use with these units. Please consult the factory.

LOAD TRANSIENT RECOVERY TIME: Output voltage returns to regulation limits within 200 microseconds after a 50% step change in load current.

ELECTROMAGNETIC INTERFERENCE: Built to meet the requirements of MIL-STD-461 for generation of and susceptability to radiated and conducted interference.

RELIABILITY: The mean time between failure (MTBF) per MIL-HDBK-217 under worst case operating conditions of full rated output current, 30 vdc input voltage, and +100°C base plate temperature, range from 20,105 hours for Model CC30D3.5 to 34,710 for Model CC3D3.5.

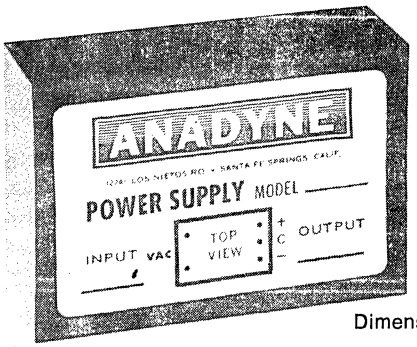
MINIATURE AC/DC POWER SUPPLIES



SERIES 400
Dimensions: 1 x 2 x 3 in.

POWER AT THE RIGHT PRICE. Regulation, ripple, and temperature stability of these supplies are comparable to much larger and more expensive units. In all cases, the specs are consistent with the requirements of most monolithic and discrete-circuit type operational amplifiers.

POWER WITH PROTECTION. All models are protected against sustained overloads and short circuits either to ground or between the two outputs. The 5V (600 Series) is protected against overvoltage. In addition, current limiting prevents excessive heating in case of shorted outputs.

POWER WITHOUT RIPPLE PROBLEMS. The low ripple of these power supplies is far better than most required circuit applications. ANADYNE'S power supplies will operate over a temperature range of 0° to 71°C; however, the output is derated outside the 10° to 55°C range.

ARNOLD MAGNETICS

SPECIAL PRODUCTS THRU MODULARIZATION

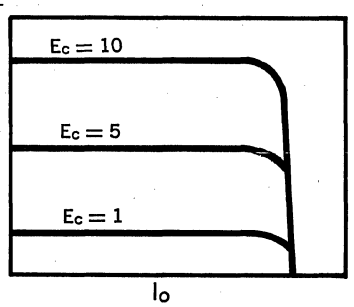
(If your application is experimental, see the free trial provision in the performance guarantee.)

The following new product concepts are based on the application of Arnold Magnetics' modularized power conditioning elements (such as those depicted in the first pages of this presentation).

This method of contributing to your product development is suggested because of its lower cost (due to using stock modules) and proven reliability (the MTBF of a typical module exceeds 100,000 hrs.).

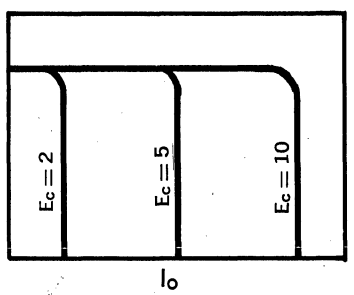
Several modifications to the modules' performance, involving voltage and current control, as a function of analog quantities, make these units as flexible as high power operational amplifiers. Special characteristics such as the following are obtained by adding modification letters to the model number. (Keep in mind these controllers have constant internal dissipation over their entire load line to, and including, short circuit).

Figure 1 — MODIFICATION PE



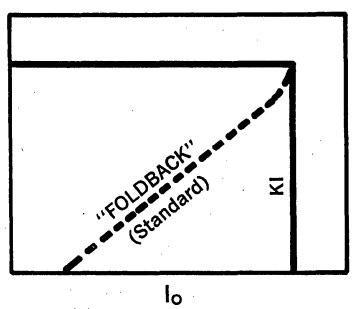
To Order:
1. Add "PE" to Model No.
2. Add $100 to 1 pc. price

Figure 2 — MODIFICATION PI



To Order:
1. Add "PI" to Model No.
2. Add $125 to 1 pc. price

Figure 3 — MODIFICATION KI



To Order:
1. Add "KI to Model No.
2. Add $100 to 1 pc. price

EXAMPLE: Mod APT-ARM100PE will deliver 0-100 VDC @ 2 amps as a function of 0-10V control signal fed to 3K Ohm (min.) input. Response time will be approximately 1 ms, depending on load.

SINE WAVE POWER SOURCES

Bidirectional outputs at frequencies of 1Hz and up (60 & 400 Hz are typical) with harmonic distortion under 5% can be produced at 5VA/in³ (if the system can tolerate zero crossing distortion during load transients affecting power factor).

A typical model is *APO-ARQ-ABD60 with preliminary specs of:

Input: 28V @ 30A
Output: 115V, 60Hz, 6A. (690 W)
Efficiency: 82%
T.H.D. (at PF = 1.0) 5% max.
Size: 4⅞" × 3¼" × 7½"
Weight: 9.3 lbs (74 W/lb)

This unit exhibits constant power per unit weight at lower output frequencies because no low frequency transformer is used. (ie: Regulator feeds load directly). To allow for "reverse" currents required by uncorrected load power factor, the output is "shorted" during load discharge. This results in approximately a 20° "flat spot" in the voltage waveshape at 0.85 power factors. (A "clean" sine wave is obtained by adding a capacitor to correct the power factor). Final specifications on these units are expected in mid 1973.

*Modules listed are enlarged versions of ASN & ARA. Module ABD will become available in mid 1973.

TEST SYSTEMS

Quality assurance and on-line test equipment in "building block" form: Utilizing various modules with standardized rack mounting, interconnection and modified associated products, a quick test set up may be compiled from stock units. The system includes transistorized loads, DVM'S, multipoint selection panels, as well as power sources. Very useful for testing power supplies, servo amps, and digital or analog assemblies.

The system is known as "RIM" (Rack mounted Instrument Modules) and is presently comprised of 12 "RIM Bin" modules. More details of the other functions available will be published in mid 1973.

POWER SOURCES to 200 VDC & 100 amps

ELECTRONIC LOADS to 300 VDC & 20A (each) - certain models available, other instruments to be added continuously.

POWER CONVERSION EQUIPMENT
Miniaturized • High Efficiency

SPECIAL PRODUCTS THRU MODULARIZATION

SERVO AMPLIFIERS

High power, miniaturized, servo amplifiers are made possible by utilizing these modularized converters with the programmable features such as shown in Figure 1. Response to frequencies near 600 Hz (3db point) is possible with DC motors or torquers with reasonable inductance and load inertia.

HIGH PERFORMANCE DC MOTORS - TORQUERS

Because of the relative ease of controlling high currents with high frequency magnetic amplifiers, the programmable, low voltage modules (such as ARM-4PE) match well with low impedance motor windings (including printed circuit types).

CONSTANT CURRENT SOURCES

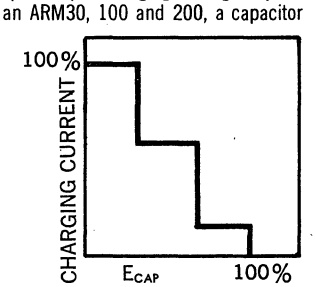
Electro magnets frequently must be controlled so as to regulate their field. Instantaneous output current sensing with gauss meter feedback can be effective in controlling currents in the hundreds of amperes.

As an example, Model APO-ARQ6PI would supply constant, adjustable current to a copper wire load whose temperature rose 100°C. Currents to 100 amps at 5 volts (.05 ohm) are available from this 3" X 5" X 12" unit.

LASER POWER (and other pulsed devices)

Pulsed laser systems frequently require rapid charging of large capacitors. By paralleling the outputs of an ARM30, 100 and 200, a capacitor can be charged at 5, 1.7 and 1.0 amps as its voltage reaches 16, 100, & 200 V respectively. The end voltage will be determined by the voltage at which the ARM-200 is set.

SPECIAL DESIGNS OF THESE UNITS ARE BEING SOUGHT BY ARNOLDS' DEVELOPMENT STAFF.



BATTERY CHARGING

When charging battery systems such as Nickel-Cadmium types, the charging current should be varied as a function of voltage, temperature, cell pressure, or history (of the cells).

Cyclical charging-discharging to "condition" such cells is accomplished by relay shorting of the battery-charging circuit. The charger will operate in the "foldback" current limit mode with little increase in internal dissipation.

A small system such as model APT-ARM30 would provide 5A charging current to a 28V battery. Shorting, "tapering" or other conditioning would be possible.

REDUNDANT OPERATION

For the ultimate in reliability, two or more separate systems can be operated in the current tracking (sharing) mode. In this way, each operates a half load. In the event of failure, the survivor operates at full load. Random and early failures are thereby nearly eliminated. The large dynamic overload range provided by this connection is often useful in enhancing reliability and performance.

LOW FREQUENCY POWER

Low frequency energy (0.1-100Hz) is frequently difficult to generate with reasonable power — size — cost relationships. It is also sometimes difficult to control amplitude near resonance and to provide for the widely varying "power factor". The Arnold programmable units are so insensitive to loading conditions, that experimental use is encouraged. Models ARO are suggested for the higher power systems.*

OTHER APPLICATIONS INCLUDE:

- **SQUIB** firing
- **SOLENOID** control
- **DIGITAL** analog power
- **AIRCRAFT** power source
- **GEOPHYSICAL** (earth-charging, truck mounted)
- **SERVO** power (torpedo-bombs, x-y plotters i.e.: Fast & Small)
- **AMPLIFIERS,** power, DC coupled, to 2 KW, to 1KHz response

HOW TO SPECIFY

1. Pick modules from tables M1 and M2.
2. Enter in table M3 with modifications from Figure 1, 2 or 3.
3. If desired, add the following paragraph to the face of the purchase order:

"The subject item will be experimentally applied by the buyer as a(n)_____

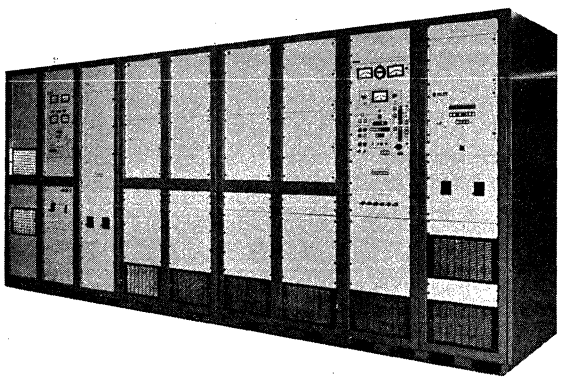
UPS UNINTERRUPTIBLE POWER SYSTEMS

AVTEL

On-line solid state AC power systems which guarantee uninterrupted, transient-free power to your critical equipment, regardless of power line conditions.

CONDITIONED POWER

AVTEL's Uninterruptible Power Systems (UPS) offer the maximum in reliability and efficiency for applications where even a momentary power failure or disturbance cannot be tolerated. High mean-time-between-failure (MTBF) coupled with modular construction for low mean-time-to-repair (MTTR) make Avtel UPS the most practical systems for continuous on-line operation.



250 KVA UPS with Solid State Bypass Switch

AVTEL UPS ARE DESIGNED TO PROVIDE THESE OUTSTANDING ADVANTAGES:

True Sinewave Output: The maximum harmonic distortion under the worst combination of conditions is less than 2%. Under normal operating conditions, less than 1.5% is typical.

Tight Frequency Control: The output frequency is completely unaffected by load and line variations. If desired, the output frequency can be phase-locked to the commercial line or other reference source. 0.5% stability is standard, 0.01% available.

Minimum Maintenance: Modular construction throughout permits quick access to and exchange of any component. A MTTR of less than 30 minutes is typical. Cleaning the air filter is the only required preventive maintenance, other than battery watering. In non-redundant systems, the bypass switch is used to supply power to the critical load directly from the commercial lines during maintenance.

Low Cost of Ownership: Avtel's low maintenance, high efficiency and trouble-free operation yield substantial savings over other approaches to uninterruptible power. This advantage becomes increasingly significant with time, and savings of over 50 percent overall in ten years ownership are not improbable.

Silent Operation: Unlike rotary systems which produce substantial noise and vibration, these compact and silent units can be installed in close proximity to the load with which they are associated thereby avoiding expensive installations.

High Power Density: These systems are the smallest and lightest yet offered in these power ranges. For example, a 75 KVA system occupies only 18 square feet of floor space, exclusive of batteries.

Unprecedented Efficiency: Operating efficiencies normally exceed 85%. This low dissipation allows laboratory operation without special cooling considerations.

RFI Suppression: Careful and effective filtration of both the input and output lines, together with ample shielding afford RFI attenuation far superior to other uninterruptible systems.

Choice of Outputs: Avtel's UPS can be ordered in standard 120/208 or 460 V, 60 Hz models or 50 Hz versions at voltage levels found in overseas installations. A complete line of 415 Hz models is also available.

Rapid Response Time: Regulation response time is typically faster than 20 ms at nominal line conditions for a 100% step load change.

Wide Range of Batteries: Batteries may be sized from 2 minutes to several hours on most Avtel models. Lead-calcium batteries are normally provided, but nickel-cadmium or other types may also be employed.

Choice of Configurations: Avtels UPS are available in basic non-redundant configurations with standard electro-mechanical bypass (A), non-redundant with solid state transfer switch, using the utility line as a redundant source (B), and fully redundant configurations (C), as dictated by individual customer requirements.

CONFIGURATIONS

Due to the cost per hour of these large computers, Avtel recommends the redundant configuration consisting of two of the 75 KVA converters for one computer, three for two computers, etc. With this system a converter can fail and be automatically disconnected from the critical bus without affecting the computer. Complete Uninterruptible Power systems with just the 415 Hz output, or combination 60 Hz (for peripherals) and 415 Hz outputs may also be specified in redundant or non-redundant configurations.

AVTEL'S SOLID STATE CONVERTERS OFFER THESE ADVANTAGES OVER CONVENTIONAL MOTOR-GENERATOR SETS.

Higher Efficiency: 86% at full load; thus less heat is generated, less power consumed.

Quiet Operation: 70 db maximum accoustical noise and no structureborne noise.

Redundant Configurations Available: Converters may be paralleled so that no failure will disturb the computer.

Ease of Installation: Due to low noise and heat generation and convenient form factors, Avtel's solid state converters may be installed anywhere, even adjacent to the computer.

Superior Performance: Waveform purity, voltage and frequency regulation are better than IBM requirements.

Uninterruptible Option: Systems may be purchased as complete UPS initially or modified at a later date if Uninterruptible Power becomes essential.

High Reliability: There are no moving parts, nothing to wear out. Redundant systems offer MTBF's in excess of 100,000 hours.

Low Cost of Ownership: All these advantages result in a smooth running computer installation with lower operating costs than other approaches. The inherent flexibility and expandability (through parallelling) of the converters prevents obsolescence even though your load profile changes.

These highly versatile and rugged units are capable of fulfilling the majority of AC power source requirements. Twenty-six standard options are offered to meet virtually any special or unusual requirement for conditioned AC power.

The unique design of this equipment results in an AC source which is a direct replacement for motor alternator sets, but with the following superior characteristics:

Output frequency unaffected by load.
Low acoustical noise.
Efficiencies approaching 90%.
Instant starting.
Sinewave output with less than 2% total harmonic distortion.
Ease of frequency variation.

SOLID STATE AC POWER FOR CRITICAL APPLICATIONS

AVTEL

PROTECTION CIRCUITS

Load: Widely adjustable current limiting capability can be set to the maximum normal requirements of the load. In the event of load malfunction, the unit will become a constant current source at the set limit.

Overload: The unit cannot be damaged by any overload or short circuit of transient or indefinite duration. Finite overloads are permitted for periods inversely proportional to the magnitude of the overload. When the permissible overload limitations are exceeded, the output voltage will reduce to such value as necessary to produce the load current limit set by the current adjust control. If the load instantaneously exceeds 150% of ratings, the output voltage will reduce to zero. If the load is gradually increased, the current will limit at 125% or the set point, whichever is lower. Reduction of the load to specification limits or current control settings will automatically reinstate normal operation.

Overheat: The output is interrupted by thermo-switches in the event of excessive internal temperatures. In such event, the cooling fan continues to operate and upon reduction of internal temperatures to specification limits, normal operation is automatically reinstated.

Backup Protection: The input power line is protected by a toggle-operated magnetic circuit breaker which doubles as the primary input and power switch. In the event of electronic protection circuitry malfunction or component failure in the power system, these breakers will prevent consequential damage to the unit, its load or the input power source.

ENVIRONMENTAL

Operating Temperature: 0 to 50°C, continuous operation.
Storage Temperature: −20 to +71°C.
Humidity: 0 to 95%. R.H., non-condensing.
Shock & Vibration: Normal transportation and handling.

LOW POWER SOLID STATE FREQUENCY CHANGERS

AVTEL

TR SERIES

250-2000 VA—45 to 450 Hz Input. 50/60, 400, 800, or 1600 Hz Output available on most models.

The low power Avtel TR Series Frequency Changers are all transistorized sources of conditioned AC power. Available in 20 standard models from 250 VA to 2000 VA, the TR Series supplies output frequencies in four different bands: 45-66 Hz, 350-450 Hz, 700-900 Hz, and 1500-1700 Hz.

The unique design of TR Frequency Changers ensures that output waveform and frequency are unaffected by changes in the load. The unit is quiet, maintenance free, and impervious to overloads and short circuits. Avtel's TR Series Frequency Changers are the ultimate solution to smaller load applications where well-regulated AC power is essential.

A.C. POWER

from the A.C. POWER SUPPLY PROBLEM SOLVERS

STANDARDS ■ SPECIALS ■ CUSTOM

20 years of innovation by the A.C. power supply pioneers — power outputs from milliwatts to tens of kilowatts — all silicon solid state.

The smallest, lightest, least expensive units available. ■ All units rated at worst case condition. ■ All units capable of continuous duty at 150% of their power rating at nominal line and high power factor load. ■ Single, two and three phase outputs. ■ Units available with switch selection of single or multi-phase output.

Ultra-sophisticated magnetics in combination with highly simplified circuitry effect dramatic size, weight and cost reduction plus greatly improved reliability. Basic power amplifiers are available in frequency ranges to suit your application, thereby eliminating the need to pay size, weight and price penalties for unnecessary frequency capability.

A.C. POWER SUPPLIES. SERIES 10/300. Power outputs from 100 to 9000 VA in 144 standard single, two and three phase models. Available in four basic frequency ranges to provide AC power anywhere from 45 Hz to 10 KHz. Feature very tight regulation, low distortion and instantaneous overload protection. Wide variety of fixed and variable frequency plug-in oscillators available. Input line power and output AC power fully isolated. Many options available.

A.C. POWER SUPPLIES. SERIES 10 NT / 300 NT. Similar to above but output ground or neutral is common to line ground or neutral. Can be used in any application where AC output does not have to be isolated or floating. Cuts weight by a factor of 4 or 5 to 1 and effects very substantial cost and size reductions.

UNINTERRUPTABLE A.C. SUPPLIES. SERIES UPS 10 / UPS 300. Battery powered series 10/300 and 10 NT / 300 NT supplies. Automatic changeover if line fails.

LINE CONDITIONERS. SERIES LC 10 / LC 300. Entirely new circuit concept provides regulated, conditioned power with any line frequency from 45 Hz to 500 Hz.

To Order: Use model no. corresponding to output power level and number of phases required. Add letter corresponding to desired frequency range. Plug-in oscillators are available in a very wide variety of frequencies, both fixed and variable. Most units are in rack mounting enclosure. Cabinet enclosed versions of any of these units are available. Specify desired lengths of time for battery operation and battery recharge of UPS units.

SERIES LC 10/LC 300 A.C. LINE CONDITIONERS

These line conditioners are not frequency sensitive and will accept and condition line power of any frequency over the range of 45-500 Hz. They are not frequency converters but true line conditioners and provide very high correction ratios of Line voltage variations, distortion, noise, spikes and transients. They are exceptionally efficient, compact, light and inexpensive.

This series of line conditioners is available in all of the power output ratings and phase configurations applicable to the A.C. power supplies listed above. For example a line conditioner to provide 1050 VA of 3 phase conditioned power in a wye configuration would be ordered as model 3-LC35. Specify nominal line voltage.

WHY DOES CEA GO TO ALL THE TROUBLE OF USING A SHIELDED TRANSFORMER ON EVERY POWER SUPPLY?

. . . Because it's the most logical way to provide electrical isolation for your system circuit. With today's IC, isolation of the circuit is mandatory by one means or another, so why not do it in the most direct, effective and least costly manner?

The extreme sensitivity of INTEGRATED CIRCUITS makes them highly vulnerable to both destruction and nuisance triggering by any extraneous voltages. This statement I'm sure we agree on, but did you know that your system's POWER SUPPLY is probably the culprit of your problems?

The power transformer of any Power Supply has a very significant amount of coupling capacitance between the primary and secondary windings (Reference column 2 of figure below) which emphatically provides an undesired direct path for all stray voltages. This direct path, which allows a complete open door for unwanted signals, is the most significant factor in the majority of today's system application field problems. As one computer engineer put it, "being off by one bit is as good as a mile."

While the exact value of this coupling capacitance is a variable with the size of the transformer, and the quality of its manufacture, CEA has taken the unique approach of providing at least 20 db of shielding at the transformer on every power supply produced.

Effectively this says that with a CEA supply, you will be getting ten (10) times less capacitance between primary and secondary (hence between line and circuit) than you would with an unshielded transformer. It's one of the real bargains of life where you benefit more by getting less.

The more critical your application the more shielding you need, so CEA also provides optional shielding of 40 db and 100 db for reduction factors of 100 and 100,000. For convenience, the typical values of capacitance for each of the 13 CEA power supply sizes and the classes of shielding are shown below.

While the circuit designer will normally think of noise as coming directly from the input line, it is also common to find that dangerous signals are being generated internally by heavy demand or high speed switching circuits. The cure to this problem is the discriminate use of separate power supplies at critical points within the system to effectively isolate the sensitive circuits. The isolation function of the shielded transformer works as a wall, blocking noise from going in either direction, in or out of the supply.

Only with CEA can your power supply take on a new function — that of being an isolator within your system.

. . . So that's why we go to all the trouble of using a shielded transformer in every Power Supply!

EXTERNAL ADJUSTMENT

For **CONSTANT CURRENT** supplies (CEAC6 series), remote programming is accomplished by adding resistance to the remote adjust terminals. With the terminals shorted, the output current will be at maximum. To decrease the output current on supplies rated at 1 amp and below, add approximately 1 ohm of resistance for each .1% of change wanted. For supplies rated above 1 amp, add 1 ohm per each .2% of change wanted. Constant current supplies may also be voltage programmed. Use zero to 1 volt for units 1 amp and below and zero to ½ volt for units over 1 amp.

APPLICATIONS

This series of highly-shielded power Line Isolators offers the systems and laboratory engineers an opportunity to fully isolate electronic test equipment such as oscilloscopes, DVM's, power supplies, oscillators, amplifiers, counters, VTVM's and signal conditioning equipment. For example, with a Line Isolator connected between the power source and an oscilloscope, electrical measurements may be made without fear of tripping circuit breakers or blowing fuses because of power ground loops. Most high-frequency line transients are capacitance-coupled through standard power transformers (500 to 5000 pfd), and cause considerable unexplained interference. Reduction of such coupling capacity is the CEA secret to interference-free performance and high common mode rejection. CEA offers three choices of Line Isolators with reduced coupling capacity; 0.01 pfd, 0.001 pfd, and 0.0005 pfd. The effect of input-to-output coupling capacity is illustrated by the impedance of that capacity at various frequencies (5000 pfd for an unshielded transformer).

CEA shielded line isolators are also finding wide acceptance among OEM manufacturers of computers and computer peripheral equipment such as computer terminals. Line transients are coupled directly thru the unshielded power supplies of such equipment and act as bona fide signals to the sensitive I.C. circuits. For integral installation into OEM equipment, special physical packaging can be designed to accommodate the particular system space.

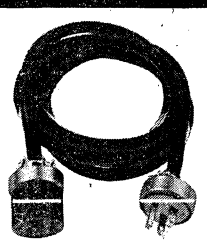
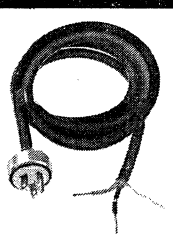
SHIELDED LINE CORDS FOR ISOLATOR OUTPUTS



STYLE A



STYLE B

To make optimum use of CEA Line Isolators, CEA offers specially designed shielded line cords in two styles and several lengths. Style A can be used as an extension cord for equipment that has a line receptacle mounted at the chassis (such as Tektronix scopes). Style B has stripped and tinned leads on one end and can be installed into equipment as a direct replacement for unshielded line cords (such as Hewlett-Packard equipment). The plugs on these cords, as well as the cable, are shielded and are constructed of the finest materials available. Other lengths, current ratings, and connectors are available on request.

Heat flows from regions of high temperature to regions of low temperature by:
1. CONDUCTION — heat flow within a material without material motion required.
2. CONVECTION — heat flow by physical motion of a material; e.g., liquids and gases.
3. RADIATION — heat flow by radiant energy, materials for the flow path not required.

The heat conductivity of various substances are: Silver 1.0, Copper .9, Gold .7, Aluminum .5, Iron .15, Steel .1, Silica .0024, Mica .0018 (.5 conductivity corresponds to about 1°C per inch or a heat flow of 5.3 watts per square inch).

The conductivity of some aluminum alloys are three times better than others, 1100F and 6063T5 are two of the better alloys.

Convection by natural means can vary about 2 to 1 for flat surface up versus a flat surface down.

Forced convection (fan-driven air) is a common cooling procedure and has the effects shown in the curve below.

Radiation depends to a large extent on the roughness of the surface. The rougher the better (e.g., the emissivity of aluminum unoxidized is .02 vs .3 oxidized).

From the above it is clear that heat flow is complex and quite variable. THE DATA GIVEN BELOW IS PRESENTED NOT AS ABSOLUTE BUT RATHER AS A GUIDE.

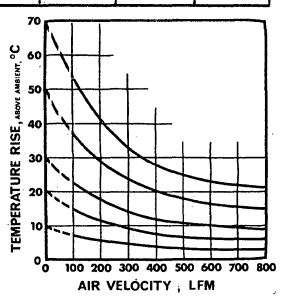
Example: Thermal No. 5, Case SA may dissipate 160 watts, have a base temperature of 53°C above ambient for a 15" x 15" x 3/32" aluminum chassis mounting, reduce the 53°C to 28°C by adding four CEATR2 THERMAL RADIATORS (mounted thru chassis to base), and then have the 28°C decreased to 11°C by 400LFM air velocity to all surfaces.

The base limitation to the life of your CEA Power Supply is the upper temperature of the internal components. As with most temperature-affected items, the cooler the unit the greater the life expectancy. Keeping the base temperature of your power supply under +80°C during normal operation will cause the internal components to be safe and give a good life.

Temperature stability may require from 10 to 40 minutes after a change, e.g., turn-on. This can be an aid during intermittent duty, and should be remembered when performing a steady-state systems analysis.



THERMAL RADIATORS

Models CEATR1 and CEATR2 Thermal Radiators, designed for use with CEA Power Supplies, may be mounted directly into the module base or on the opposite side of the mounting body. The mounting hole configuration in the Thermal Radiators and the base of each Module are symmetrical so that the radiators may be mounted for airflow in either direction across the base of the Module. A coating of silicon grease should be applied on each mating surface of the Module, mounting body and Thermal Radiator. The mounting body must be a smooth, highly thermal conductive metallic surface.

Single Phase & Two Phase Output

Standard 3 phase amplifiers may be used to provide a 2 phase output at ⅔ of rated output power. Special plug-in oscillators are available with selectable 90° or 120° phase separation for 2 phases or 3 phase operation respectively.
Standard 3 phase amplifiers may be used to provide a single phase output at 57% of rated output power over an adjustable voltage range of 110-125 volts.

OSCILLATORS AC LINE CORRECTORS

800T-SERIES PLUG-IN OSCILLATORS

Companion Plug-in Oscillators are available in three types: (A) General-purpose, fixed-frequency; (B) Crystal-controlled, high-stability fixed-frequency; and (C) Continuously variable frequencies. All may be used with the Solid-State Invertrons® to create 1ϕ, 2ϕ, or 3ϕ custom AC power sources tailored to exact requirements. The fixed-frequency oscillators may be ordered with a servo-feedback option for systems requiring extremely high amplitude stabilities and accuracies. This feature provides overall regulation of up to 0.01% against line and load changes.

Reliability

Short Circuit Protected

Filtered Input

Crestronics Inc. DC to DC Converters are designed as a power supply for electronic circuits with a minimum of interference in the audio and rf ranges. The 20 KHz conversion employed eliminates all audio range problems and an internal input filter reduces the rfi conductance noise to a level of less than 30 mv P-P across a one ohm resistor in series with the input.

OUTPUT INFORMATION

POWER

On regulated units the power is specified with an input differential of 4 volts and an $E_{IN\ MIN.}$ of 22 volts.

For an input differential of greater than 4 volts, derate output to:

$$\text{Watts derated} = 18\ \frac{.5\ \text{Watts rated}}{\Delta E_{IN} + 3.7}$$

For a minimum input voltage of less than 22 volts, derate output power to:

$$\text{Watts derated} = \text{Watts rated}\ \frac{E_{IN\ MIN.}}{22}$$

On unregulated units the output power will be expressed as:

$$\text{Watts} = .8\ E_{IN}\ I_{IN}$$

With output voltages lower than 15 volts, derate output power to:

$$\text{Watts derated} = \text{Watts rated}\ \frac{\text{Output Volts} + 15}{30}$$

Temperature = Derate 1%/°C over 70°C

VOLTAGE

Regulated units: The nominal output voltage is specified in the model number and may be screwdriver adjusted from +5% to —30%.

Unregulated units: The output voltage will be proportional to the input voltage. The input/output voltage ratio will be specified in the model number.

ISOLATION

All outputs greater than 100 VDC will be isolated to 6000 VDC. All outputs less than 99 VDC will be isolated to 100 VDC. Isolation resistance will be greater than 10K Meg. For special isolation requirements call our engineering department.

1. On output voltages less than 20 volts the switching spikes will be about 100 mv p-p. These can be easily reduced by adding a capacitor on the output terminals.
2. Because of common mode ripple it is necessary to know when a positive ground system is used (see ordering information).
3. The conversion frequency will be approximately 18KHz at nominal input and output voltages.

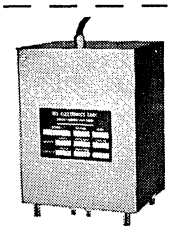
REGULATED MODULES TRANSISTORIZED SERIES "TRHV"



The TRHV series of regulated power supplies are all solid state units. Reference and regulating circuitry is accomplished at low voltage. The units are completely self-contained and require only 115 Volt AC 60/400 cycle excitation to be operative. These supplies are rugged and feature good line, load and thermal stability. The operating temperature range is −20°C to +55°C. Regulation better than 0.25% for 10% line change & NL to FL. Ripple 0.5% RMS at max current.

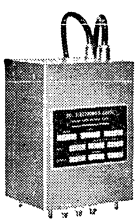
UNREGULATED MODULES COMPACT HIGH VOLTAGE SERIES "S"



These power supplies are designed for operation from either a 0-115 volt or 0-125 volt line at 60/400 cycles. Three input terminals are provided to permit proper line connection. The output is available from shielded polyethylene cables and may be varied over the full range by varying the input AC line. The two output cables are insulated for the full output voltage, so that either the positive or negative terminal may be grounded.* All units have selenium rectifiers and are hermetically sealed in an epoxy, vacuum filled, metal case.

Units for 50 cycle operation at various line voltages are available on request.

*Model 40-2-4 is designed with one output cable for single polarity operation. When ordering, please specify polarity.

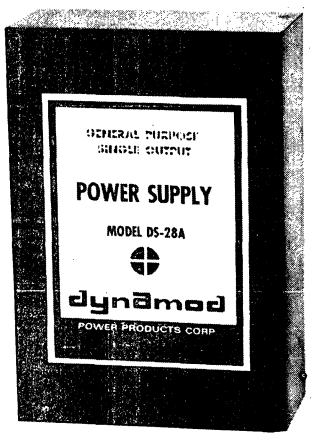
MINIATURE MODULAR ENCAPSULATED DC POWER SUPPIES



ULTRA-RELIABLE, COMPACT, RUGGED, LOW COST AND OFF THE SHELF DELIVERY

DESCRIPTION

The Dynamod Corp. modular miniaturized encapsulated power supplies are a series of regulated DC power supplies which, in addition to their high performance qualities, are ultra-reliable, compact, rugged and moderate in price.

All Dynamod encapsulated power supplies are "potted" with an aluminum oxide filled epoxy. This is among one of the many superior construction techniques which allow higher heat conduction to insure highly reliable operation and virtually any environmental condition.

The Dynamod power supplies are available with either single or dual outputs. The output voltage and current ranges of the Dynamod power supplies provide the user with maximum versatility. Over 56 models are available in voltages from 3.6 VDC to 28 VDC with currents to 2 amp. These modules are particularly appropriate for use in todays modern applications. Common uses are to power Operational Amplifiers, Digital Logic, Shift Registers, ROM's, RAM's A to D converters, D to A converters, and other signal conditioning instrumentation.

The Dynamod encapsulated series are packaged in the standard rectangular case to save PC board area for more compact designs.

Whatever your choice, single output or dual output, each one of these miniature DC power supplies is backed by Dynamod's standard of excellence.

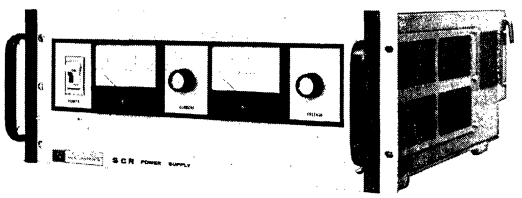
PRECISE REGULATION kw POWER supplies

The SCR Power Supplies are high efficiency, high power units designed for a wide range of applications where both precise constant-current and constant-voltage operation are required. Competitive comparison shows E/M power supplies have lowest voltage ripple, more watts per cubic inch and per pound.



The EM Power Supplies have the same advantages and the same applications where the precise regulation of the SCR Power Supply is not required. The EM Power Supplies are a low-cost 1% regulated voltage and current DC source in the medium power ranges up to 10 kw.

CONSTANT-CURRENT SOURCES FOR KRYPTON, XENON AND OTHER LAMPS

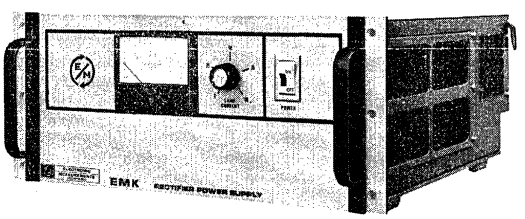
EMX Power Supplies are specifically designed as constant-current sources for Xenon and other high pressure lamps. The EMX Series provides stable light output, automatic starting through igniter pulse timing control, output current adjustment, and provisions for remote turn-on/off and programming. Low current ripple insures maximum lamp life.

Model	Type Lamp	Price
EMX 28-75	1600W lamp	$ 900
EMX 35-100	2500W lamp	$1000
EMX 40-165	6000W lamp	$1200

EMK Power Supplies are specifically for Krypton precision arc lamps; for single lamps or two lamps in series. Ideal for laser pumping. *Option 5 (below) provides automatic, built-in lamp ignition without expensive high-voltage components on a separate chassis.* This supplies a high-voltage pulse of about 20 kV across the Krypton lamp, immediately followed by a sustaining voltage to maintain the plasma. If the lamp ignites, the high voltage circuits are deactivated; if no ignition occurs, the sequence repeats for about six attempts and then shuts down. Other features include remote on-off terminals for cooling interlock, remote turn-on/off and programming, ripple less than 1% (0.5% with Option 5), and response speed under 10 ms.

Single-Lamp Models			
EMK 120-50	120 VDC	50A	$1200
EMK 150-40	150 VDC	40A	$1200
Two-Lamp Models			
EMK 200-30	200 VDC	30A	$1200
EMK 240-25	240 VDC	25A	$1200
EMK 220-50	220 VDC	50A	$2100

All models operate from 208/220 or 380V 3-phase 47-63 Hz input except EMK 220-50.



STANDARD OPTIONS

1. Local Elapsed Time Meter — $50 (Xenon & Krypton)
2. Local Voltmeter — $25 (Xenon & Krypton)
3. Reduced ripple to less than 1% RMS — $100 (Xenon only)
4. Remote controlled current programming automatically between two preset levels with preset time interval — $150 (Xenon only)
5. Built-in automatic igniter — eliminates need for separate chassis, etc., for high voltage ignition pulse — $500 (Krypton only). Specify I suffix (EMKI) and one- or two-lamp operation.

Selection Guide For Basic 3-Output Models

All Models	100 Watts Model MM 100	200 Watts Model MM 200	400 Watts Model MM 400	Overvoltage Protection
Output Voltages*	Maximum Current	Maximum Current	Maximum Current

No. 2 +12 to +16	2.5	5	10	Optional
No. 3 −12 to −16	2.5	5	10	Optional
Alt. No. 2 +24 to +32	1.25	2.5	5	Optional
Alt. No. 3 −24 to −32	1.25	2.5	5	Optional

* Any value may be selected between those shown. Outputs Nos. 2 and 3 are complementary and all outputs are referenced to the same ground. Select either 12 to 16 or 24 to 32 volts. Remember, total power from all outputs combined cannot exceed value listed for a particular model.

The Multi-Module Series output voltages and currents were selected to cover the most popular combinations known at this time. To select your Multi-Module from the above guide, proceed as follows:

1. Let's assume your basic requirements are: Output No. 1 +5V DC at 8A, Output No. 2 +15V at 1A, and Output No. 3 −15V at 2A.
2. Determine maximum total power output (5 x 8 = 40W, 15 x 1 = 15W, 15 x 2 = 30W) for a total of 85W, which is below 100W, so we tentatively select Model MM100.
3. Check voltages to determine that they are within range specified. +5 volts is between 4 and 6.2V for Output No. 1; ±15 is between ±12 to ±16 for Outputs Nos. 2 and 3.
4. Check current ratings to be sure they do not exceed limits for model selected. 8A is below 10A (max. for Output No. 1), 1A is below 2.5A for Output No. 2, and 2A is below 2.5A for Output No. 3.
5. Specify Model MM100 with +5V at 8A, +15V at 1A, and −15V at 2A.
6. If either current or power exceeds maximum value specified, select larger model.

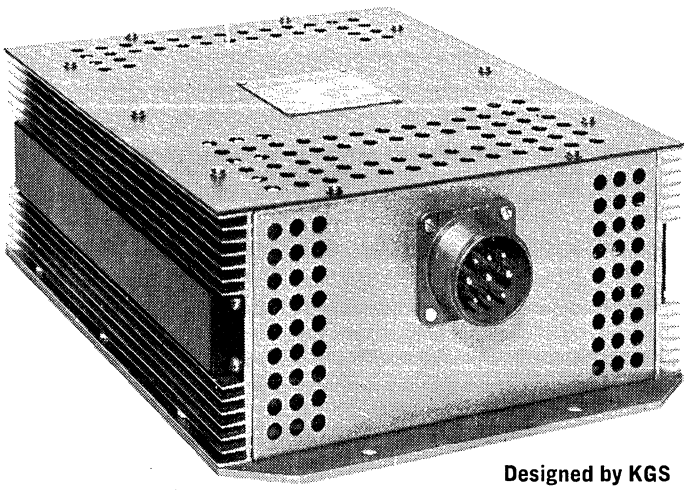
FLITE-TRONICS

60 Hz & 400 Hz STATIC INVERTERS



Designed by KGS

Other Inverters Available:

- **Model PC-14C ( ) 100 VA**
- **Model PC-14D ( ) 60 VA**
- **Model PC-14B 125 VA**
- **Model PC-15B ( ) 250 VA**
- **Model PC-17**

Environmental specifications of the above models, same as PC-17A

- **12 VDC to 24 VDC Converters**
- **24 VDC to 12 VDC Converters**

For applications requiring greater than 750 VA of continuous power, the Flite-Tronics' Model PC-17A Inverter can be paralleled as necessary to double, triple, or quadruple the output power of a single unit. This is simply done by phase locking the oscillator in the PC-17A. Malfunction of a single unit when connected in this manner will not damage the other units in parallel. Each unit has its own overload protection. Each device is capable of self-preservation.

RECHARGEABLE NICKEL-CADMIUM BATTERIES

STANDARD BATTERIES FOR STANDARD APPLICATIONS

- Micro-valve resealable vent
- High-rate discharge
- Excellent discharge voltage characteristic
- Overcharge capability
- Long operating life
- High reliability
- Indefinite storage life
- Rechargeable over and over
- Mount in any position

General Electric sealed nickel-cadmium batteries provide a highly reliable source of portable electrical power that is ready to go when you are. These multi-purpose dollar saving batteries can be charged time and time again without "using up" any of the active materials in the electrochemical system, so you get high power performance after every charge. And you don't have to worry about overcharging. General Electric's nickel-cadmium batteries can be left on charge in an overcharge condition at the recommended rate for weeks and months without any adverse effects.

General Electric sealed nickel-cadmium batteries can be operated in any position, making them ideal for cordless portable devices where long life and high performance are required. The "storeability" and maintenance-free dependability of these batteries also make them well suited for standby power applications where the batteries must be ready to serve the instant normal power fails.

These rechargeable nickel-cadmium batteries are designed for standard applications in which the cell case temperature in the battery pack will not exceed 49°C (120°F). For more rigorous high temperature applications, specify General Electric's Goldtop* rechargeable batteries below.

NOBRUSH® FREQUENCY

GENERATOR CORPORATION

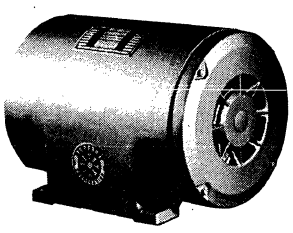
The heart of each "NoBrush" Frequency Converter is a "NoBrush" permanent magnet generator—a revolutionary development in its own right. The "NoBrush" permanent magnet generator features a cast aluminum rotor designed to give amazing voltage stability. It elimniates brushes, commutators, slip rings, resulting in absolute minimum maintenance. Elimination of excitation losses gives amazingly high efficency, with consequent low heating. Other "NoBrush" advantages are excellent wave form, and immunity to damage by repeated overload or short circuit.

PERMANENT MAGNET DESIGN

"NoBrush" Motor Generators and Frequency Converters were developed in response to the demand for an efficient, compact, dependable quiet unit, for powering electronic and high frequency equipment. A typical "NoBrush" generator is mounted with a high quality induction or synduction motor within a single shell. Oversize pre-lubricated ball bearings, sealed for life, insure long term maintenance-free operation. Magnetism is permanently "locked in" at a high level. Problems of radio interference, sparking, fouling, etc., have been eliminated. Because of its simple design and rugged construction, the unit withstands extremes of mechanical and electrical operating conditions, resulting in continuous long-life service.

PERMANENT MAGNET FEATURES:

- ☐ *Line Isolation and Stabilization*
- ☐ *Maximum Dependability*
- ☐ *Cool Operation*
- ☐ *Very Low Audible Noise*
- ☐ *Extremely Low R.F. Noise (zero for most applications)*
- ☐ *Compact Construction*
- ☐ *Light Weight*
- ☐ *High Overload Capacity*
- ☐ *Minimum Maintenance*
- ☐ *Withstands Short Circuits*
- ☐ *Stable Output Voltage*
- ☐ *Low Internal Impedance (favorable for pulse loads)*
- ☐ *Operates in Adverse Environments*



60 TO 60 Hz LINE ISOLATOR SERIES 30 UNIT SHELL

This small isolator stabilizer Motor-Generator offers full line isolation for small power requirements up to 1 KVA. Permanent magnet field generator coupled with the high inertia of the rotating system assures maximum electrical isolation between line and load. The rugged unit shell construction gives long, maintenance-free operation.

Overcurrent Protection:	Units are shipped with current limit starting at approx. 130% at full load, folding back to approx. 20% of short circuit. All units will recover automatically from current overload.			
Reverse Polarity Protection:	All units will accept a release current equal to the rating of the unit.			
Output impedance:	Less than 250 M ohm — D.C. to 250 K Hz			
Recovery Time:	Recovers to within 100 MV of initial voltage in less than 20 for a 50% load change.			
Application:	Powercards are designed as low cost units exceptionally good for linear and digital ICSI although the output voltage ranges allow wide use in other applications. The specification has been set by taking the average and maximum ratings of all major IC families as used in control instrumentation and educational applications. For user convenience, a connector with solder tabs is supplied with back powercard. Four screws at M3 metric size are provided.			
Mounting:	Powercards allow plug-in chassis or card frame mounting. Alternative mounting points, tapped M3, are provided in the base and on the rugged aluminum heat sink/cover.			
Connections:	May be soldered directly onto the board (solder pins provided) or attached to the contacts of the printed circuit edge connector provided.			
Series/Parallel Operation:				
JG-PC1500A5	Units may be connected in series for use as a 5-0-5 V supply but require derating for single 10 V output*. Parallel connection should be limited to two units to insure effective operation of the overvoltage crowbar.			
JG-PC500A15	Units may be connected in series for use as a 15-0-15 V supply but require derating for single 30 V output. Parallel connections of units OK.			
JG-PC250A15/15	Units cannot be connected in parallel with each other and require derating for single 30 V output.			
JG-PC250B15/15	The two isolated outputs on an individual unit may be connected in series to form a 15-0-15 V supply or they may be connected to give dual outputs of 12-15 V each. The two outputs may also be connected directly in parallel provided care is taken to insure that the individual output voltages are set to the same level. Powercards of this type may not be connected in parallel and require derating for single 30 V output.			
JG-PC250C5/15	Internal outputs may be series connected to form a 5-0-15 V supply or connected to give dual output 5-6 V and 12-15 V. Units cannot be parallel connected. Derating required for single 20 V output.			
Voltage:	All units have output voltage adjustment controlled by an easily accessible multiturn potentiometer. This allows precise settings over the specified voltage range plus a safety overlap. Additionally, on JG-PC250A15/15, the negative output tracks the positive output. A potentiometer in the positive line allows output voltage adjustments over the range 12-0-12 V to 15-0-15 V. The second potentiometer is for balance control e.g. and allows adjustments for 12-0-15 V, 15-0-12 V etc.			
Current:	All units have foldback overcurrent protection.			

Powertron SOLID STATE AC POWER SUPPLIES

The Powertron AC Power Supplies provide stable, low distortion, AC power at frequencies within the audio frequency spectrum. These highly reliable and versatile power sources find wide application in calibration and test stations, motor drives, gyro wheel supplies, laboratory use, military component testing, and operating foreign equipment. These supplies may be used whenever it is necessary to provide AC power at a frequency not available from the power lines.

The various supplies feature all solid state construction, wide operating frequency range, low distortion, and a wide variety of output voltages and impedances. The units are designed to be used in modular form so that a single unit can provide single phase output, and two or three units may be used to provide two phase or three phase outputs respectively.

The ordering designations listed below are for convenience of specifying the components required for various power supply configurations. To select an appropriate unit for your requirements first determine which category, 1-phase, 2-phase, or 3-phase, is most suitable to your intended load. Then use the ordering designation adjacent to the required output power within that category. For the complete ordering designation replace the asterisk with the ordering code letters of the plug-in-oscillator listed

DESCRIPTION

CONSTANT CURRENT POWER SUPPLIES operate from AC line power and produce a stable regulated constant DC output current. This output is isolated from the power line and chassis.

CONSTANT CURRENT REGULATORS are powered from an unregulated DC voltage source and produce one or more stable regulated DC output currents. Normally the negative terminal is common to both input and output.

DC to DC POWER SUPPLIES

utility grade

DESCRIPTION

These special purpose DC to DC power supplies are designed to be used for public utility or industrial applications in sheltered environments. They provide common regulated output voltages that are normally used to power control or communication systems. Outputs are isolated from the case and from the input.

VC60 types provide up to 60 watts of class A regulated power and consist of a DC to DC converter followed by two class A regulators.

DCM types are intended to operate from high voltage DC power busses and use a duty cycle modulated pre-regulator to obtain efficiency and prevent excess heat buildup in confined areas. The duty cycle modulator is followed by an isolating DC to DC converter and two class A regulators.

DCT types are simple DC to DC converters which produce two rectified outputs which are isolated from the input, case, and from each other. They effectively serve as a 1 to 1 DC transformer.

KEPCO power supplies

Kepco's 1973 power supply catalog is organized by important product groups for ready access. The groups are classified by the major characteristics that they share. For example: OEM-type modular power supplies may be found in the first section, *Modules*. Power supplies that must respond quickly to programming instructions are cataloged in the *High Speed* section.

Many power supplies, of course, can be classified in more than one section. . . . Kepco's BHK group, for example, are high voltage, automatic crossover, fast programmable, general purpose lab style power supplies. We will catalog their complete characteristics in the *High Voltage* section, and cross-reference BHK in the *High Speed* and *General Purpose* categories.

KEPCO BKF *modular* POWER SUPPLIES

UL RECOGNIZED TO UL478 and UL114

The Kepco BKF design combines an I-C driven series transistor regulator with a modified re-entrant over-current circuit. Voltage is controlled over a small adjustment range, protected by a built-in overvoltage crowbar. The crowbar trip point is tabulated for each model. Adjustable trip is optionally available.

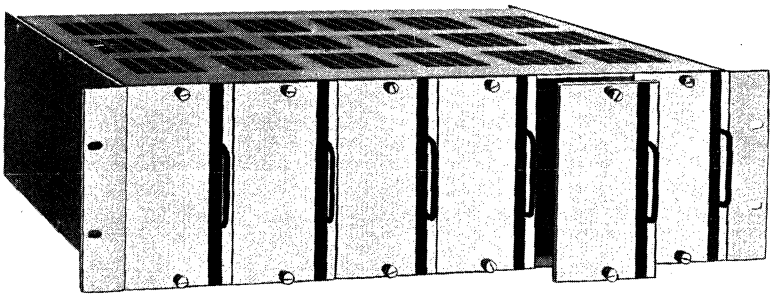
KEPCO PAX MODULAR POWER SUPPLIES



6 uncased modules mounted in RA 22-6 housing using BPA-22 slide adapters

PAX modules are low-cost, single-amplifier power supplies that can be used with voltage or current feedback. (2) External current sensing, using the *voltage* amplifier. Effects are measured for a 1-volt current sensing voltage drop.
(3) Whichever is greater.
(4) Typical temperature effect coefficients are: 0.005% per °C voltage mode; 0.01% per °C externally sensed current mode. See option "–T."
(5) One terminal grounded or connected so that the common-mode current does not flow through the load or (in current mode) through a sensing resistor.
(6) 20 Hz to 10 MHz.

INPUT: 105-125V a-c or 210-250V a-c (selected) 50-440 Hz, 1φ.
TEMPERATURE, AMBIENT OPERATING: Cased: −20°C to +65°C. Uncased: −20°C to +71°C. (no derating)
TEMPERATURE: STORAGE: −40°C to +85°C.
ISOLATION: The output terminals are isolated from the grounded case. A maximum of 500 volts (d-c or peak) can be connected between either output terminal and the case.
PROGRAMMING: PCX is fully programmable by resistance or external voltage signals. Control current is ≅1 mA for 1000 ohms/V (option "–R" provides a calibration control). The positive terminal is common. For operational (amplifier) control, an offset voltage nulling control is available, see Option "–E." Suffix "MAT" models have 10-turn voltage control built-in. Resolution: 0.05%.
OPEN LOOP d-c GAIN: $>0.5\times10^6$ volts per volt.
VOLTAGE RECOVERY (for step load current): <50 μseconds for recovery to within 0.005% or 2 mV of setting.
CURRENT LIMITING: Adjustable from 10% to 105% of the rated full current.
REMOTE ERROR SENSING: Compensates up to 0.5V drop per output lead.
OVERSHOOT: (Turn-on/off): None above 25% voltage setting; negligible below 25% when preloaded to 10% minimum.
SERIES/PARALLEL: Series operation to rated isolation; also master/slave capability. Current limiting design permits self-determined parallel load sharing.
TERMINALS: All input, output and control connections are made via a multi-terminal barrier strip and printed circuit connector.
COOLING: Convection.
DIMENSIONS: *Uncased:* 2½"H x 3 13/16"W x 12 13/16"D.
Cased: (Suffix C) 2 11/16"H x 4⅛"W x 13 3/16"D.
PCX-MAT: 5 23/32"H x 2 23/32" W x 15" D
FINISH: Blue anodized aluminum.
CASES/MOUNTING: Model number without suffix specifies an uncased open model. Add suffix "C" and $15.00 to price for wraparound case — or order Case CA-1 separately. Cased models can be rack mounted on adapters RA 12-1, RA 13-4 or RA 11-6. Uncased models can be used with BPA-22 slide adapter for plug-in mounting. These fit interchangeably with metered "MAT" — option models in Cases CA-3, CA-4, CA-5, RA 22-6 or RA-32. *See Hardware section.*
OPTIONS: (add suffix to the model number).
"–MAT" This option provides for a fully metered plug-in package with separate voltmeter and ammeter and a 10-turn output voltage control. Furnished *uncased* for mounting in single unit case CA-3, dual case CA-4 or triple case CA-5. May be rack mounted in six-unit housing Model RA-22-6, or RA-32 see *Hardware Section.*
"–R" CONTROL CURRENT ADJUSTMENT: ± 10% trimmer provides for programming calibration. Add $10.00 to price.
"–T" LOWER TEMPERATURE COEFFICIENT: 0.005% per °C in voltage mode, 0.01% per °C in current mode. Add $30.00 to price.
"–E" OFFSET VOLTAGE NULLING: For operational programming. Zero the fixed part of the control amplifier's voltage offset. Add $10.00 to price.

POWER SUPPLIES

The Kepco PRM voltage regulated modules are simple, reliable, efficient, fixed output sources. The design is based on a ferroresonant power transformer called Flux-O-Tran® which provides both regulating and overload current limiting. The extra-filtered models (suffix F) have a Pi section LC filter, reducing their ripple to about a tenth that of the single section capacitor-filtered models. The *dual* output models have two independent d-c circuits that may be used in series or in parallel or separately. Size "D" models feature an adjustable output tap.

This tabluation specifies the limit of change in the regulated output for defined variations in the major influences. To obtain a realistic appraisal of the behaviour in your environment, multiply each influence by its probable range of variations and sum the pertinent effects.

INPUT: 115V a-c, ±15V a-c, 60 Hz ±5% single phase.

Overseas Models: For 50 Hz ±5%, specify suffix "–50." Inputs (selectable) are: 104 ±13.5V a-c, 115 ±15V a-c, 208 ±27V a-c or 230 ±30V a-c. Units delivered wired to the 230V a-c tap. Output current rating is decreased 20% in the 50 Hz version. Add $15.00 to the unit price.

NOTE: Input frequency variations produce an approximately equal percentage output voltage change.

TEMPERATURE, AMBIENT OPERATING: –20°C to +55°C.

TEMPERATURE, STORAGE: –40°C to +85°C.

COOLING: Convection.

OUTPUT IMPEDANCE: 1 kHz to 10 kHz: 0.05 ohms, 10 kHz to 100 kHz: 0.05 ohms + 0.5 microhenries. Below 1000 Hz, the impedance is a function of load current and may be derived from the slope of the load regulation curve $\Delta E/\Delta I$.

VOLTAGE RECOVERY (step load current, 50–100%): <400 ms.

OVERLOAD PROTECTION: Current limiting transformer restricts short circuit current to safe value. A thermal circuit breaker is employed in *dual* models.

ISOLATION: The output terminals are isolated from the grounded case. A maximum of 600 volts (d-c or peak) can be connected between either output terminal and the case (or between the outputs of dual models.)

SERIES/PARALLEL OPERATION: Identical models, or halves of a dual supply can be paralleled for approximately double current (allow for 10% imbalance). Series operation to rated isolation.

ACCESSORIES: Various rack adapters available, see hardware page. *Cases:* Size A uses CA-200; Size C uses CA-300. Sizes B and D have non-removable integral enclosures. To order a fully cased model in sizes A and C, add a suffix letter "C" to the model number.

FINISH: *Cases:* royal blue.

OUTPUT RANGES

VOLTAGE MODE: 0–100% of rated voltage. (See option "–E.")

CURRENT MODE (internally sensed):
Setting range: 2% I_o max. to 110% I_o max.
Control range (that part of setting range for which the current meets its stabilization specification): 10% I_o to 100% I_o max.

CURRENT MODE (externally sensed, 1-volt sample, with current feedback to the *voltage* amplifier): 1 mA to 100% I_o max. Models equipped with option "–E" can be controlled from approximately 1 microampere current to maximum output.

Voltage mode: Flag is ≤0V d-c.
Current mode: Flag is ≥5V d-c; source impedance 5k ohms.

CONTROL/PROGRAMMING
Voltage channel: Output voltage is operationally controlled by resistance ratios functioning with either the internal or an external reference, or by a control voltage in the feedback loop, or in the noninverting input.
Current channel: The current is sampled by an internal resistance. An internal current setting potentiometer is provided. External control can be exercised by an adjustable voltage (0–0.5) or by external potentiometer.

REMOTE ERROR SENSING: Separate voltage sensing terminals permit 4-wire connections to a load; will compensate for static load effects up to 0.5V per lead.

ISOLATION FROM GROUND: The circuit of PTR is isolated from its case and ground. It may be placed in series with up to 500 volts d-c (or peak) off ground; common mode current from output to ground: <5 μA rms, 50 μA p-p at 60 Hz.

SERIES/PARALLEL: Terminals are provided for shared voltage or shared current interconnection of two or more PTR modules. (PTR models with "–VP" suffix may *not* be used in parallel.)

DYNAMICS
Voltage recovery: For step load current, the time required for stabilized voltage to recover within the load effect band (or 2 mV, whichever is greater): <50 microseconds.
Current recovery: For step load voltage, an RC time constant assuming a value for "C" as given in the table. "R" is the load resistance. For fast recovery current stabilizers, see OPS Group III.

Programming speed (voltage channel): PTR models slew at approximately 250 volts per second (depending on load). For fast-programming applications, see OPS Group III.

OPS group I-II

OPS group I

A high-gain, single-channel, wide-band, d-c amplifier for scaling or summing, OPS—I is in modular form for inclusion into a larger system. OPS—II is in a plug-in format with a patch board panel for bench-top or systems use. An I-C front end contributes very low offset for accurate tracking of control signals. The low shunt capacitance output allows for rapid voltage programming or fast current stabilized load recovery.

Cased: 2¹³⁄₁₆"H x 4⅛"W x 13⅜"D

UNCOMMITTED CONTROL CHANNEL

OPEN LOOP d-c GAIN: >0.5 x 10^6 volts per volt.

FEEDBACK: Provision is made for feedback from the negative (−) output/sense terminal so that the OPS will function as a wide-band, inverting d-c amplifier. It is a unipolar device, producing a negative (−) output for a positive (+) input with respect to the (+) output/sense terminal which is common.

DYNAMICS

Maximum slewing rate (the fastest rate of change that can be obtained by overdriving or forcing): See table.

Programming time constant: The RC product of the feedback resistance and capacitance. The resistance is a nominal 1000 ohms per volt; the capacitance is adjustable for OPS -I: 400 pF to 1000 pF (except 800 pF to 1600 pF for Model OPS 7—2B); for OPS—II: 800 pF to 1800 pF.

Frequency response: The maximum modulation frequency is given by the expression: f max = slewing rate/$\pi E_{p\text{-}p}$. The −3 dB frequency is given by the programming time constant.

LOAD REACTANCE: Operational power supplies are restricted to capacitive loads no greater than 0.001 microfarad.

OFFSET NULLING: The initial or bias part of the uncommitted channel's voltage offset (E_{io}) can be nulled (zeroed) by a built-in trimmer.

REFERENCES: A pair of ±6.2V (±5%), 1 milliampere references are provided for offsetting or biasing purposes.

CURRENT STABILIZATION

The OPS—I and OPS—II are equipped with a built-in current sensing and feedback arrangement for protective limiting. It is controlled by an internal trimmer over the range 10% to 105% I_o max. For the precision control of current, the uncommitted control channel may be connected so as to sample the drop across an external current-sensing resistor in the plus (+) output lead. Using an external 0—1000 ohm current feedback rheostat, current can be controlled from approximately 1 microampere to 100% I_o max.

CURRENT RECOVERY (for step load voltage): The current recovery time constant is the smaller of the programming time constant or the ratio of the current setting to the tabulated output capacitance.

GENERAL

TEMPERATURE RATINGS:
Storage: −40°C to +85°C.
Operating: −20°C to +71°C. Cooling is by natural convection.

SOURCE POWER REQUIREMENT: Units are factory-wired for 105—125V a-c, 50—440 Hz power. A simple jumper change will reconfigure the input for 210—250V a-c, 50—440 Hz. Power consumption: approximately 50W; 0.9 power factor; internally fused.

ISOLATION FROM GROUND: The circuit and output terminals of OPS—I and OPS—II have no d-c connection to ground, and may be floated up to 500 volts (d-c or peak) off ground. The common mode current from output to ground is less than 5 microamperes rms, 50 microamperes p-p at 60 Hz.

TERMINALS: Source power, d-c output, sense and control connections are made through the PC plug that mates with the PC—1 or the connector in a selected housing. In the OPS—II, the amplifier summing junction (null terminal), output and sense terminals, and both references are also brought to a panel patch board for easy access for input, output and feedback connections.
